Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

CodeReference (including record number)  4.1.1.1.(1)-01  Attribution - functional statement/objective  Not applicable

Application

A1. Storage, handling, use and processing of flammable liquids and combustible liquids in buildings, structures and open areas.

Exception:

- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”.
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To state the application of Part 4.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Areas in process plants used for the storage, handling and processing of flammable liquids and combustible liquids, where conditions must be addressed by design and operational details specific to the hazard.

Application

Not applicable

Attribute - functional statement/objective

4.1.1.1.(2)-01

CodeReference (including record number)

2) Areas in process plants, where conditions must be addressed by design and operational details specific to the hazard, need not conform to this Part, where alternative protection is provided in conformance with Article 1.2.1.1. of Division A. (See Appendix A.)

CodeText

I1. To exempt certain industrial facilities and operations from the application of Part 4 because of:
- extraordinary and unique conditions, and
- the use of alternative measures that provide a level of safety equivalent to the level of safety prescribed in Part 4, as discussed in Appendix Note A-4.1.1.1.(2).

Intent
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.1.1.1.(3)-01
Attribution - functional statement/objective Not applicable

CodeText

A1. Transportation of flammable liquids or combustible liquids within the scope of the “Transportation of Dangerous Goods Regulations.”
A2. The installation of oil burning equipment, piping and supply tanks covered within the scope of CAN/CSA-B139, “Installation Code for Oil-Burning Equipment” (see Appendix A),
A3. The storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects (see Appendix A),
d) the storage of aerosol products covered under Subsection 3.2.5.,
e) liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
f) the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
g) liquids such as certain halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, or
h) the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55, “Storage Requirements for the Upstream Petroleum Industry.”

Application

A1. Transportation of flammable liquids and combustible liquids within the scope of the Transportation of Dangerous Goods Regulations.
A2. The installation of oil burning equipment, piping and supply tanks covered within the scope of CAN/CSA-B139.
A3. The indoor storage of packaged aerosol products within the scope of Subsection 3.2.5.,
A4. Liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act.
A5. The production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act.
A6. The storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55, “Storage Requirements for the Upstream Petroleum Industry.”

Intent

I1. To exempt certain operations from the application of Part 4 because of their coverage by other regulations, standards or code documents, or elsewhere in the Alberta Fire Code 2006.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.1.1.1.(3)-02
Attribution - functional statement/objective Not applicable

CodeText

3) This Part shall not apply to
a) the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations,”
b) appliances and their ancillary equipment within the scope of CAN/CSA-B139, “Installation Code for Oil-Burning Equipment” (see Appendix A),
c) the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects (see Appendix A),
d) the storage of aerosol products covered under Subsection 3.2.5.,
e) liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
f) the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
g) liquids such as certain halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, or
h) the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55, “Storage Requirements for the Upstream Petroleum Industry.”

Application

A1. Storage of flammable liquids and combustible liquids on farms for individual farm use and on isolated construction projects.

Intent

I1. To exempt certain operations from the application of Part 4 because of the low fire hazard posed to the community due to isolation, separation, low occupant load or temporary use.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.1.1.1.(3)-03
Attribution - functional statement/objective Not applicable

Code

3) This Part shall not apply to:

a) the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations,”

b) appliances and their ancillary equipment within the scope of CAN/CSA-B139, “Installation Code for Oil-Burning Equipment” (see Appendix A),

c) the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects (see Appendix A),

d) the storage of aerosol products covered under Subsection 3.2.5.,

e) liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,

f) the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,

g) liquids such as certain halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, or

h) the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55, “Storage Requirements for the Upstream Petroleum Industry.”

Intent

4.1.1.1.(3)-03
Application

A1. Liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions.

I1. To exempt certain liquids from the application of Part 4 because of the low fire hazard posed due to the inherent properties of the liquids.
Application and intent of Division B provisions

**CodeReference** (including record number)  4.1.1.1.(4)-01

**Attribution - functional statement/objective**  Not applicable

**CodeText**

4) In addition to the requirements in this Part, the storage, handling and use of flammable liquids and combustible liquids in laboratories shall be in conformance with Section 5.5.

**Application**

A1. Storage, handling and use of flammable liquids and combustible liquids in laboratories where such liquids are used as part of normal laboratory operations.

**Intent**

I1. To direct Alberta Fire Code 2006 users to Section 5.5.
Application and intent of Division B provisions

Application

A1. Storage, handling, use and processing of flammable liquids and combustible liquids in buildings, structures and open areas.

Exception:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Exception: except where otherwise described in Part 4.

Intent

I1. To state the application of Section 4.1.
A1. Classification of flammable liquids and combustible liquids in buildings, structures and open areas, including:
- used lubricating oils drained from motor vehicles that are mixed with other lower flash point liquids as described in Sentence 4.1.2.3.(2), and
- combustible liquids that are processed, stored, handled or used at a temperature at or above its flash point as described in Sentence 4.1.2.2.(1).

Exception:
except as stated in:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to:
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

CodeReference (including record number) 4.1.2.1.-(2)-01

Attribution - functional statement/objective Not applicable

CodeText

2) Flammable liquids shall be Class I liquids, and shall be subdivided into:
   a) Class IA liquids, which shall include those having a flash point below 22.8°C and a boiling point below 37.8°C,
   b) Class IB liquids, which shall include those having a flash point below 22.8°C and a boiling point at or above 37.8°C, and
   c) Class IC liquids, which shall include those having a flash point at or above 22.8°C and below 37.8°C.

Application

A1. Subdivision of Class I flammable liquids according to their flash points and boiling points, in buildings, structures and open areas.

Exception:
   except as stated in
   - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
   - Sentence 4.1.1.1.(3), which applies to
     - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
     - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
     - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
     - the storage of aerosol products covered under Subsection 3.2.5.,
     - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
     - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
     - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
     - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

11. To classify flammable liquids for the purposes of Part 4 and make such classifications consistent with NFPA 30.
3) Combustible liquids shall be Class II or Class IIIA liquids, and shall be subdivided into:
   a) Class II liquids, which shall include those having a flash point at or above 37.8°C and below 60°C, and
   b) Class IIIA liquids, which shall include those having a flash point at or above 60°C and below 93.3°C (see Appendix A).

Application
A1. Subdivision of combustible liquids into Class II and Class IIIA liquids according to their flash points, in buildings, structures and open areas.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent
I1. To classify combustible liquids for the purposes of Part 4 and to make such classifications consistent with NFPA 30.
I2. To limit the application of the Alberta Fire Code 2006 to Class I to IIIA liquids, therefore excluding Class IIIB liquids [having a flash point equal to or greater than 93.3°C] that are otherwise covered in NFPA 30.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Classification of combustible liquids heated to temperatures that are at or above their flash point, in buildings, structures and open areas.

Exception:

- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To clarify that Class II and IIIA combustible liquids as described in Sentence 4.1.2.1.(3) shall be treated as Class I flammable liquids in Part 4 if heated at a temperature higher than their flash points.

I2. To include Class IIIB liquids [having a flash point equal to or greater than 93.3°C and presently excluded from the Alberta Fire Code 2006 in Article 4.1.2.1.] in the scope of the Alberta Fire Code 2006 and to require that they be treated as Class I liquids in Part 4 if heated at a temperature higher than their flash points.

When a liquid having a flash point at or above 37.8°C is being processed, stored, handled or used at a temperature at or above its flash point, it shall be treated as a Class I liquid.

I1. To clarify that Class II and IIIA combustible liquids as described in Sentence 4.1.2.1.(3) shall be treated as Class I flammable liquids in Part 4 if heated at a temperature higher than their flash points.

I2. To include Class IIIB liquids [having a flash point equal to or greater than 93.3°C and presently excluded from the Alberta Fire Code 2006 in Article 4.1.2.1.] in the scope of the Alberta Fire Code 2006 and to require that they be treated as Class I liquids in Part 4 if heated at a temperature higher than their flash points.

1) When a liquid having a flash point at or above 37.8°C is being processed, stored, handled or used at a temperature at or above its flash point, it shall be treated as a Class I liquid.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Classification of used lubricating oils, drained from motor vehicles in buildings, structures and open areas.

Exception: except as stated in:
- Sentence 4.1.2.3.(2), which applies to used lubricating oils, drained from motor vehicles, that are mixed with other lower flash point liquids,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to:
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

Not applicable

Attribution - functional statement/objective
4.1.2.3.(1)-01

CodeReference (including record number)

I1. To clarify that used lubricating oil drained from motor vehicles that is not mixed with other lower flash point liquids is within the scope of Part 4, where it should be treated as a Class IIIA liquid without the need for testing to determine the flash point, as would otherwise be required in Subsection 4.1.3.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Classification of used lubricating oils drained from motor vehicles and mixed with Class I or Class II liquids, in buildings, structures and open areas.

Exception:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

A1. Classification of used lubricating oils drained from motor vehicles and mixed with Class I or Class II liquids, in buildings, structures and open areas.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To supersede the flammability classification established in Sentence 4.1.2.3.(1) if used lubricating oil drained from motor vehicles is mixed with Class I or II liquids, because of the increased fire hazard created by the addition – to used oil – of liquids that are more flammable.

I2. To clarify that the resulting mixture may be tested in conformance with Subsection 4.1.3., or alternatively, classified as a Class 1C liquid if Class I liquids are added or as a Class II liquid if only Class II liquids are added, so as to be able to determine the flash point of the mixture and classify it as required in Article 4.1.2.1.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Testing to determine the flash point of flammable liquids and combustible liquids having a viscosity of less than 6 mm²/s at 37.8°C and a flash point below 93.3°C, in buildings, structures and open areas, and - used motor vehicle lubricating oils mixed with Class I and II liquids as described in Sentence 4.1.2.3(2).

Exception: except as stated in - Sentences 4.1.3.1.(3) and 4.1.3.1.(4), which apply to the testing of aviation turbine fuels and paints, enamels, lacquer, varnishes and related products and components; - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants; - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”; - appliances and their ancillary equipment within the scope of CAN/CSA-B139; - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects; - the storage of aerosol products covered under Subsection 3.2.5.; - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act; - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act; - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

1) Except as provided in Sentences (3) and (4), the flash point of liquids having a viscosity less than 6 mm²/s at 37.8°C and a flash point below 93.3°C shall be determined in conformance with ASTM D 56, "Flash Point by Tag Closed Cup Tester."

I1. To limit the probability that improper determination of flash points will lead to a fire or explosion, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

CodeReference (including record number) 4.1.3.1.(2)-01
Attribution - functional statement/objective F01-OS1.1

CodeText

2) Except as provided in Sentences (3) and (4), the flash point of liquids having a viscosity of 6 mm²/s or more at 37.8°C or a flash point of 93.3°C or higher shall be determined in conformance with ASTM D 93, “Flash Point by Pensky-Martens Closed Cup Tester.”

Application

A1. Testing to determine the flash point of
- liquids having a viscosity of 6 mm²/s or more at 37.8°C or a flash point of 93.3°C or higher, in buildings structures and open areas, and
- used motor vehicle lubricating oils mixed with Class I and II liquids as described in Sentence 4.1.2.3.3.(2).

Exception:
except as stated in
- Sentences 4.1.3.1.(3) and 4.1.3.1.(4), which apply to the testing of aviation turbine fuels and paints, enamels, lacquer, varnishes and related products and components,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

11. To limit the probability that improper determination of flash points will lead to a fire or explosion, which could lead to harm to persons.
Application and intent of Division B provisions

CodeText 3) ASTM D 3828, “Flash Point by Small Scale Closed Cup Tester,” is permitted to be used for testing aviation turbine fuels within the scope of this procedure.

Application

A1. Testing to determine the flash point of aviation turbine fuels in buildings, structures and open areas.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that improper determination of flash points will lead to a fire or explosion, which could lead to harm to persons.

Alberta Fire Code 2006

Application and intent of Division B provisions

CodeReference (including record number) 4.1.3.1.(4)-01
Attribution - functional statement/objective F01-OS1.1

CodeText

4) ASTM D 3278, “Flash Point of Liquids by Small Scale Closed-Cup Apparatus,” is permitted to be used for paints, enamels, lacquers, varnishes and related products and their components having flash points between 0°C and 110°C, and having a viscosity less than 15 000 mm²/s (150 stokes) at 25°C.

Application

A1. Testing to determine the flash point of paints, enamels, lacquers, varnishes and related products and their components that have a viscosity less than 15 000 mm²/s (150 stokes) at 25°C and a flash point between 0°C and 110°C, in buildings, structures and open areas.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that improper determination of flash points will lead to a fire or explosion, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Electrical equipment in buildings, structures and open areas where flammable liquids and combustible liquids are processed, stored, handled and used.

Exception:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 5.5.3.5.(3) for laboratories where flammable liquids and combustible liquids are used as part of normal laboratory operations.

Intent
11. To limit the probability that electrical equipment will ignite vapours, which could lead to a fire or explosion, which could lead to harm to persons in buildings or outdoor areas, including emergency responders.
Application and intent of Division B provisions

A1. Design of refrigerators, where such refrigerators are required to keep Class I liquids at a temperature below normal ambient conditions.

This applies to the design of refrigerators with respect to electrical equipment located within the storage compartment, within the outer shell, on the door and on the door frame of the refrigerator, and

- mounted on the outside surface of the refrigerator.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application
A1. Design of refrigerators, where such refrigerators are required to keep Class I liquids at a temperature below normal ambient conditions.

This applies to the design of refrigerators with respect to electrical equipment located within the storage compartment, within the outer shell, on the door and on the door frame of the refrigerator, and

- mounted on the outside surface of the refrigerator.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent
I1. To limit the probability that electrical equipment will ignite vapours, which could lead to a fire or explosion, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Fire protection equipment where there are special hazards of operation, dispensing or storage.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”;
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

F02,F03-OP1.2

1) Fire protection equipment shall be provided where there are special hazards of operation, dispensing or storage.

Intent

I1. To limit the probability that fire will spread, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

CodeText

1) Fire protection equipment shall be provided where there are special hazards of operation, dispensing or storage.

Application

A1. Fire protection equipment where there are special hazards of operation, dispensing or storage in buildings, structures and open areas where flammable liquids and combustible liquids are processed, stored, handled and used.

Exception:
- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants;
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
    - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that fire will spread, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.1.5.2.(1)-01
Attribution - functional statement/objective F01-OS1.1

Application

A1. Devices, operations or activities that produce an ignition source such as from open flames, sparks or heat, in buildings, structures and open areas where flammable liquids and combustible liquids are processed, stored, handled and used.

Exception:

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.1.5.3.(1), which applies to designated safe areas for smoking
- Sentence 4.1.5.7.(1), which applies to hot works conforming to Section 5.2.
- Sentence 5.5.3.5.(3), which applies to laboratories where flammable liquids and combustible liquids are used as part of normal laboratory operations.

Exception:

except if measures are taken to prevent ignition sources from creating a fire or explosion hazard.

Intent

I1. To limit the probability that ignition sources such as open flames, sparks or heat will ignite vapours, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

1) Unless controlled in a manner that will not create a fire or explosion hazard, a device, operation or activity that produces open flames, sparks or heat shall not be permitted in an area described in Article 4.1.1.1. (See Appendix A.)

Application

A1. Control of devices, operations or activities that produce an ignition source such as from open flames, sparks or heat, in a manner that does not create a fire or explosion hazard.

This applies to buildings, structures and open areas where flammable liquids and combustible liquids are processed, stored, handled and used.

Exception:

except as stated in

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.1.5.3.(1), which applies to designated safe areas for smoking
- Sentence 4.1.5.7.(1), which applies to hot works conforming to Section 5.2.
- Sentence 5.5.3.5.(3), which applies to laboratories where flammable liquids and combustible liquids are used as part of normal laboratory operations.

Intent

I1. To limit the probability of igniting vapours in a manner that could lead to harm to persons.
I2. To remove the prohibition to have ignition sources if appropriate measures are taken.

CodeReference (including record number) 4.1.5.2.(1)-02
Attribution - functional statement/objective F01-OS1.1
A1. Smoking prohibition in buildings, structures and open areas where flammable liquids and combustible liquids are processed, stored, handled and used.

Exception:
- except as stated in - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 2.4.2., which applies to designated smoking areas.

I1. To limit the probability that smoking material will ignite vapours, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Signs designating areas in which smoking is prohibited in buildings, structures and open areas where flammable liquids and combustible liquids are processed, stored, handled and used.

Exception:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 2.4.2., which applies to designated smoking areas.

I1. To direct the Alberta Fire Code 2006 user to Article 2.4.2.2. for information related to signs used to designate areas in which smoking is prohibited.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Ground vegetation—and the accumulation of combustible materials [Class A fires] that are not essential to operations—surrounding and in buildings, structures and open areas where flammable liquids and combustible liquids are processed, stored, handled and used.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”;
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

F01-OS1.1

Attribution - functional statement/objective

1) Areas described in Article 4.1.1.1. shall be kept clean and free of ground vegetation and accumulations of combustible materials not essential to operations.

Intent

I1. To limit the probability that combustible materials will be ignited [Class A fires], which could lead to the ignition of vapours, which could lead to harm persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Storage of cleaning rags, impregnated with flammable liquids or combustible liquids, in receptacles in buildings, structures and open areas.

Exception:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

A1. Storage of cleaning rags, impregnated with flammable liquids or combustible liquids, in receptacles in buildings, structures and open areas.

Exception:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

H. To expand the application of Article 2.4.1.3.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Emergency planning measures in buildings, structures and open areas where flammable liquids and combustible liquids are processed, stored, handled and used.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

Not applicable

Intent

1. To direct Alberta Fire Code 2006 users to Section 2.8.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Fire safety plan required as part of the emergency planning measures in buildings, structures and open areas where flammable liquids and combustible liquids are processed, stored, handled and used.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that delays or inappropriate actions in responding to fires or spill emergencies will lead to the spread of fire beyond the point of origin, which could lead to harm to persons, including emergency responders.

I2. To assist personnel of the authority having jurisdiction and other inspecting authorities in confirming conformance to fire code requirements concerning fire safety planning, and in becoming familiar with the building’s fire safety measures.
Application and intent of Division B provisions

Alberta Fire Code 2006

4.1.5.6.(1)-01

F12-OP1.2

A1. Access for firefighting operations in and around buildings, structures and open areas where flammable liquids and combustible liquids are processed, stored, handled and used.

Exception:
- except as stated in:
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

1) Required aisles and other access paths shall be maintained to permit the unobstructed movement of personnel and fire department apparatus so that firefighting operations can be carried out in any part of an area used for the storage, use or handling of flammable liquids or combustible liquids.

Intent

11. To limit the probability that delays and a lack of access to all areas in and around buildings during firefighting operations will lead to the spread of fire beyond the point of origin, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

4.1.5.6.(1)-02

Attribution - functional statement/objective

F12-OP3.1

Application

A1. Access for firefighting operations in and around buildings, structures and open areas where flammable liquids and combustible liquids are processed, stored, handled and used.

Exception:

- except as stated in - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that delays and a lack of access to all areas in and around buildings during firefighting operations will lead to the spread of fire beyond the point of origin, which could lead to damage to adjacent buildings or facilities.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application:

1) Required aisles and other access paths shall be maintained to permit the unobstructed movement of personnel and fire department apparatus so that firefighting operations can be carried out in any part of an area used for the storage, use or handling of flammable liquids or combustible liquids.

Exception:

except as stated in:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

1) Hot works performed in buildings, structures and open areas where flammable liquids and combustible liquids are processed, stored, handled and used.

Exception:

- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

A1. Hot works performed in buildings, structures and open areas where flammable liquids and combustible liquids are processed, stored, handled and used.

Exception:

- as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

11. To direct Alberta Fire Code 2006 users to Section 5.2.
A1. Storage, handling or use of Class I liquids in basements or pits of buildings, structures and open areas.

Exception:

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
- the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.1.5.8.(2), which applies to storage of up to 5 L in safety containers
- Article 4.2.4.5., which applies to for storage of up to 5 L in dwelling units
- Sentence 4.2.5.2.(3), which applies to for storage in closed containers in mercantile occupancies

I1. To limit the probability that vapour will be released in low areas, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

2) Not more than 5 L of Class I liquid is permitted to be stored in basements, provided it is stored in safety containers conforming to ULC/ORD-C30, "Safety Containers."

Application

A1. Storage of Class I liquids in the basement of buildings and structures, and as provided in Sentences Sentence 4.2.4.5.(1) and Sentence 4.2.5.2.(3) if
- there is not more than 5 L total quantity, and
- storage is in safety containers conforming to ULC/ORD-C30.

Exception:
- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
    - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To remove the prohibition in Sentence 4.1.5.8.(1) to store Class I liquids in basements, if the liquids are
- in limited quantities that they do not pose a serious fire hazard, and
- in containers that will limit the probability of release and ignition of vapours and of spillage under normal conditions, and that will limit the probability of explosion of the container under fire conditions.

I2. To override the choices offered in Clauses 4.2.3.1.(1)(a) to 4.2.3.1.1.(e).
Application and intent of Division B provisions

Alberta Fire Code 2006

Application
A1. Spill control measures for flammable liquids and combustible liquids, in buildings, structures and open areas where flammable liquids and combustible liquids are processed, stored, handled and used.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Clause 4.6.3.3.(2)(c), which applies to dispensers of Class II or IIIA liquids installed inside a building.

A2. This also applies to dangerous goods in packages or containers in quantities greater than those shown in Table 3.2.7.1.:
- per fire compartment, when stored indoors, as required in Article 3.2.7.11., and
- per individual storage area, when stored outdoors, as required in Article 3.3.2.13.

Exception:
except as stated in
- Sentence 3.1.1.4.(1), which applies to:
  - the storage and dispensing of Class 2.1 flammable gases at fuel-dispensing stations, and
  - facilities operated by manufacturers or distributors handling or storing more than 1 500 kg, as stated in Appendix Note A-3.1.1.4.(1)(a) of Class 2 gases.
- Sentence 3.3.1.1.(2), which applies to certain outdoor storage, and
- Sentence 4.1.6.1.(3), water-miscible effluent from spills and firefighting operations.

Intent
I1. To limit the probability that the escape of flammable liquids, combustible liquids or dangerous goods, including that resulting from firefighting operations, will lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Spill control measures for flammable liquids and combustible liquids, in buildings, structures and open areas where flammable liquids and combustible liquids are processed, stored, handled and used.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

A2. This also applies to dangerous goods in packages or containers in quantities greater than those shown in Table 3.2.7.1.: per fire compartment, when stored indoors, as required in Article 3.2.7.11., and per individual storage area, when stored outdoors, as required in Article 3.3.2.13.

Exception: except as stated in
- Sentence 3.1.1.4.(1), which applies to:
- the storage and dispensing of Class 2.1 flammable gases at fuel-dispensing stations, and
- facilities operated by manufacturers or distributors handling or storing more than 1 500 kg, as stated in Appendix Note A-3.1.1.4.(1)(a) of Class 2 gases.
- Sentence 3.3.1.1.(2), which applies to certain outdoor storage, and
- Sentence 4.1.6.1.(3), water-miscible effluent from spills and firefighting operations.

Intent

I1. To limit the probability that the escape of flammable liquids, combustible liquids or dangerous goods will lead to a fire or the spread of fire outside the spill area, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Spill control measures for flammable liquids and combustible liquids, in buildings, structures and open areas where flammable liquids and combustible liquids are processed, stored, handled and used.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Clause 4.6.3.3.(2)(c), which applies to dispensers of Class II or IIIA liquids installed inside a building.

A2. This also applies to dangerous goods in packages or containers in quantities greater than those shown in Table 3.2.7.1.,
- per fire compartment, when stored indoors, as required in Article 3.2.7.11., and
- per individual storage area, when stored outdoors, as required in Article 3.3.2.13.

Exception:
- except as stated in Sentence 3.1.1.4.(1), which applies to:
  - the storage and dispensing of Class 2.1 flammable gases at fuel-dispensing stations, and
  - facilities operated by manufacturers or distributors [handling or storing more than 1 500 kg, as stated in Appendix Note A-3.1.1.4.(1)(a)] of Class 2 gases,
- Sentence 3.3.1.1.(2), which applies to certain outdoor storage, and
- Sentence 4.1.6.1.(3), water-miscible effluent from spills and firefighting operations.

Intent

I1. To limit the probability that the escape of flammable liquids, combustible liquids or dangerous goods will lead to a fire or the spread of fire outside the spill area, which could lead to harm to persons, including emergency responders, in other parts of the building, adjacent buildings or adjacent outdoor areas.
Application and intent of Division B provisions

Alberta Fire Code 2006

1) Except as permitted in Sentence (3), a spill of flammable liquids or combustible liquids shall be prevented from flowing outside the spill area and from reaching waterways, sewer systems and potable water sources by:
   a) constructing a noncombustible barrier capable of containing the spill, or
   b) grading the site or sloping the floor to divert the spill to a drainage system conforming to Article 4.1.6.2.

(See Appendix A.)

Application

A1. Spill control measures for flammable liquids and combustible liquids, in buildings, structures and open areas where flammable liquids and combustible liquids are processed, stored, handled and used.

Exception:
   except as stated in:
   - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
   - Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
   - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
   - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
   - the storage of aerosol products covered under Subsection 3.2.5.,
   - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
   - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
   - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
   - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
   - Clause 4.6.3.3.(2)(c), which applies to dispensers of Class II or IIIA liquids installed inside a building.

A2. This also applies to dangerous goods in packages or containers in quantities greater than those shown in Table 3.2.7.1.: per fire compartment, when stored indoors, as required in Article 3.2.7.11., and per individual storage area, when stored outdoors, as required in Article 3.3.2.13.

Exception:
   except as stated in:
   - Sentence 3.1.1.4.(1), which applies to:
     - the storage and dispensing of Class 2.1 flammable gases at fuel-dispensing stations, and
     - facilities operated by manufacturers or distributors [handling or storing more than 1 500 kg, as stated in Appendix Note A-3.1.1.4.(1)(a)] of Class 2 gases,
   - Sentence 3.3.1.1.(2), which applies to certain outdoor storage, and
   - Sentence 4.1.6.1.(3), water-miscible effluent from spills and firefighting operations.

Intent

I1. To state the application of Article 4.1.6.2.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Spill containment measures for aboveground storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To direct Alberta Fire Code 2006 users to Subsection 4.3.7. for the construction of barriers required by Clause 4.1.6.1.(1)(a).
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Drainage of water-miscible effluent from firefighting operations and spills [or leakage], where the effluent does not create a fire hazard.

This applies to spill control measures for flammable liquids and combustible liquids, in buildings, structures and open areas where flammable liquids and combustible liquids are processed, stored, handled and used.

Exception:

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Clause 4.6.3.3.(2)(c), which applies to dispensers of Class II or IIIA liquids installed inside a building.

A2. This also applies to dangerous goods in packages or containers in quantities greater than those shown in Table 3.2.7.1.:
- per fire compartment, when stored indoors, as required in Article 3.2.7.11., and
- per individual storage area, when stored outdoors, as required in Article 3.3.2.13.

Exception:

except as stated in
- Sentence 3.1.1.4.(1), which applies to:
  - the storage and dispensing of Class 2.1 flammable gases at fuel-dispensing stations, and
  - facilities operated by manufacturers or distributors [handling or storing more than 1 500 kg, as stated in Appendix Note A-3.1.1.4.(1)(a)] of Class 2 gases, and
- Sentence 3.3.1.1.(2), which applies to certain outdoor storage.

Inten

11. To permit drainage to a sewer system, if certain conditions are met [i.e. the effluent is water-miscible and does not create a fire hazard].

This is to limit the probability that escaped liquids, including contaminated water used for firefighting, will lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application
A1. Drainage of water-miscible effluent from firefighting operations and spills [or leakage], where the effluent does not create a fire hazard.

This applies to spill control measures for flammable liquids and combustible liquids, in buildings, structures and open areas where flammable liquids and combustible liquids are processed, stored, handled and used.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Clause 4.6.3.3.(2)(c), which applies to dispensers of Class II or IIIA liquids installed inside a building.

A2. This also applies to dangerous goods in packages or containers in quantities greater than those shown in Table 3.2.7.1.: 
- per fire compartment, when stored indoors, as required in Article 3.2.7.11., and
- per individual storage area, when stored outdoors, as required in Article 3.2.3.13.

Exception: except as stated in
- Sentence 3.1.1.4.(1), which applies to:
  - the storage and dispensing of Class 2 flammable gases at fuel-dispensing stations, and
  - facilities operated by manufacturers or distributors [handling or storing more than 1 500 kg, as stated in Appendix Note A-3.1.1.4.(1)(a)] of Class 2 gases, and
- Sentence 3.3.1.1.(2), which applies to certain outdoor storage.

Intent
I1. To permit drainage to a sewer system, if certain conditions are met [i.e. the effluent is water-miscible and does not create a fire hazard].

This is to limit the probability that escaped liquids, including contaminated water used for firefighting, will create a fire or lead to the spread of fire outside of the spill area, which could lead to harm to persons, including emergency responders, in other parts of the building, adjacent buildings or adjacent outdoor areas.
A1. Inclusion – in the fire safety plan required by Article 4.1.5.5. – of measures to direct the overflow of liquids.

This applies to spill control measures for flammable liquids, combustible liquids and water used for firefighting purposes, in buildings, structures and open areas where flammable liquids and combustible liquids are processed, stored, handled and used.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- Sentence 4.1.1.1.1.(3), which applies to appliances and their ancillary equipment covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- Sentence 4.1.1.1.1.1.1., which applies to appliances and their ancillary equipment covered under Subsection 3.2.5.,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied natural gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Clause 4.6.3.3.(2)(c), which applies to dispensers of Class II or IIIA liquids installed inside a building.

A2. This also applies to dangerous goods in packages or containers in quantities greater than those shown in Table 3.2.7.1., when stored indoors, as required in Article 3.2.7.11., and per individual storage area, when stored outdoors, as required in Article 3.3.2.13.

Exception:
- except as stated in Sentence 3.1.1.4.(1), which applies to appliances and their ancillary equipment covered under Subsection 3.2.5.,
- facilities operated by manufacturers or distributors [handling or storing more than 1 500 kg, as stated in Appendix Note A-3.1.1.4.(1)(a)] of Class 2 gases, and
- Sentence 3.3.1.1.(2), which applies to certain outdoor storage.

Intent
11. To limit the probability that the escape of liquids or dangerous goods, including contaminated water used for firefighting, will lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application
A1. Inclusion – in the fire safety plan required by Article 4.1.5.5. – of measures to direct the overflow of liquids.

This applies to spill control measures for flammable liquids, combustible liquids and water used for firefighting purposes, in buildings, structures and open areas where flammable liquids and combustible liquids are processed, stored, handled and used.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Clause 4.6.3.3.(2)(c), which applies to dispensers of Class II or IIIA liquids installed inside a building.

A2. This also applies to dangerous goods in packages or containers in quantities greater than those shown in Table 3.2.7.1., when stored indoors, as required in Article 3.2.7.11., and per individual storage area, when stored outdoors, as required in Article 3.3.2.13.

Exception:
- except as stated in Sentence 3.1.1.4.(1), which applies to:
- the storage and dispensing of Class 2 flammable gases at fuel-dispensing stations, and
- facilities operated by manufacturers or distributors [handling or storing more than 1,500 kg, as stated in Appendix Note A-3.1.1.4.(1)(a)] of Class 2 gases, and
- Sentence 3.3.1.1.(2), which applies to certain outdoor storage.

Intent
11. To limit the probability that the escape of liquids or dangerous goods, including contaminated water used for firefighting, will lead to a fire or to the spread of fire outside the spill area, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

A1. Inclusion – in the fire safety plan required by Article 4.1.5.5. – of measures to direct the overflow of liquids.

This applies to spill control measures for flammable liquids, combustible liquids and water used for firefighting purposes, in buildings, structures and open areas where flammable liquids and combustible liquids are processed, stored, handled and used.

Exception:
- except as stated in - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of the can/csa-b139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the safety codes act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the safety codes act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- clause 4.6.3.3.(2)(c), which applies to dispensers of class II or IIIa liquids installed inside a building.

A2. This also applies to dangerous goods in packages or containers in quantities greater than those shown in Table 3.2.7.1., when stored indoors, as required in Article 3.2.7.11., and per individual storage area, when stored outdoors, as required in Article 3.3.2.13.

Exception:
- except as stated in - Sentence 3.1.1.4.(1), which applies to - the storage and dispensing of Class 2 flammable gases at fuel-dispensing stations, and
- facilities operated by manufacturers or distributors [handling or storing more than 1 500 kg, as stated in Appendix note A-3.1.1.4.(1)a)] of class 2 gases, and
- sentence 3.3.1.1.(2), which applies to certain outdoor storage.

Intent

I. To limit the probability that the escape of liquids or dangerous goods, including contaminated water used for firefighting, will lead to a fire or to the spread of fire outside the spill area, which could lead to harm to persons, including emergency responders, in other parts of the building, adjacent buildings or adjacent outdoor areas.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.1.6.1.(5)-01
Attribution - functional statement/objective F01,F44–OP3.1

CodeText

5) No person shall dump, dispense, discard, or otherwise dispose of flammable liquids or combustible liquids into a sewer.

Application

A1. Prohibition on the dumping, dispensing, discarding or disposing of flammable liquids or combustible liquids into a sewer.

Exception:
- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
    - appliances and their ancillary equipment within the scope of CAN-CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that flammable liquids or combustible liquids could release flammable vapours within the sewer system or externally through access locations, which could lead to the ignition of the vapours, which could lead to a fire or an explosion, which could lead to damage to adjacent buildings or facilities.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

A1. Spill diverting measures for flammable liquids, combustible liquids and water used for firefighting purposes in buildings, structures and open areas where flammable liquids and combustible liquids are processed, stored, handled and used.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

A2. This also applies to dangerous goods in packages or containers in quantities greater than those shown in Table 3.2.7.1.:
- per fire compartment, when stored indoors, as required in Article 3.2.7.11., and
- per individual storage area, when stored outdoors, as required in Article 3.3.2.13.

Exception: except as stated in
- Sentence 3.1.1.4.(1), which applies to Class 2 gas manufacturing and dispensing facilities, and
- Sentence 3.3.1.1.(2), which applies to certain outdoor storage.

Intent

I1. To limit the probability that the escape of liquids or dangerous goods, including contaminated water used for firefighting, will lead to a fire or to the spread of fire outside the spill area, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Spill diverting measures for flammable liquids, combustible liquids and water used for firefighting purposes in buildings, structures and open areas where flammable liquids and combustible liquids are processed, stored, handled and used.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

A2. This also applies to dangerous goods in packages or containers in quantities greater than those shown in Table 3.2.7.1:
- per fire compartment, when stored indoors, as required in Article 3.2.7.11., and
- per individual storage area, when stored outdoors, as required in Article 3.3.2.13.

Exception: except as stated in
- Sentence 3.1.1.4.(1), which applies to Class 2 gas manufacturing and dispensing facilities, and
- Sentence 3.3.1.1.(2), which applies to certain outdoor storage.

Intent

I1. To limit the probability that the escape of liquids or dangerous goods will lead to a fire or to the spread of fire outside the spill area, which could lead to harm to persons, including emergency responders, in other parts of the building, adjacent buildings or adjacent outdoor areas.

I2. To limit the probability that the escape of liquids or dangerous goods will hamper firefighting operations or automatic fire suppression systems, which could lead to the spread of fire beyond the point of origin, which could lead to harm to persons, including emergency responders.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.1.6.2.(1)-03
Attribution - functional statement/objective F44-OH5

A1. Spill diverting measures for flammable liquids, combustible liquids and water used for firefighting purposes in buildings, structures and open areas where flammable liquids and combustible liquids are processed, stored, handled and used.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- the storage and handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.1.6.1.(3), which applies to distilleries.

A2. This also applies to dangerous goods in packages or containers in quantities greater than those shown in Table 3.2.7.1.:
- per fire compartment, when stored indoors, as required in Article 3.2.7.11.; and
- per individual storage area, when stored outdoors, as required in Article 3.3.2.13.

Exception: except as stated in
- Sentence 3.1.1.4.(1), which applies to Class 2 gas manufacturing and dispensing facilities, and
- Sentence 3.3.1.1.(2), which applies to certain outdoor storage.

Intent
I1. To limit the probability that the escape of liquids or dangerous goods – including contaminated water used for firefighting – will lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Closed drainage systems for flammable liquids, combustible liquids and water used for firefighting purposes in buildings, structures and open areas where flammable liquids and combustible liquids are processed, stored, handled and used.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

A2. This also applies to dangerous goods in packages or containers in quantities greater than those shown in Table 3.2.7.1.,
- per fire compartment, when stored indoors, as required in Article 3.2.7.11., and
- per individual storage area, when stored outdoors, as required in Article 3.3.2.13.

Exception:
- except as stated in Sentence 3.1.1.4.(1), which applies to Class 2 gas manufacturing and dispensing facilities, and
- Sentence 3.3.1.1.2.(2), which applies to certain outdoor storage.

Intent
I1. To limit the probability that flame will propagate beyond the trap or flashback from a burning spill of liquid or dangerous goods, which could lead to harm to persons.
Application and intent of Division B provisions

Application

A1. Spill control maintenance and operating procedures for flammable liquids and combustible liquids in buildings, structures and open areas where flammable liquids and combustible liquids are processed, stored, handled and used.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

A2. This also applies to dangerous goods in packages or containers in quantities greater than those shown in Table 3.2.7.1.:
- per fire compartment, when stored indoors, as required in Article 3.2.7.11., and
- per individual storage area, when stored outdoors, as required in Article 3.3.2.13.

Exception:
- except as stated in Sentence 3.1.1.4.(1), which applies to Class 2 gas manufacturing and dispensing facilities, and
- Sentence 3.3.1.1.(2), which applies to certain outdoor storage.

Intent

I1. To limit the probability that the escape of liquid or dangerous goods will lead to a fire or to the spread of fire, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Application

A1. Spill control maintenance and operating procedures for flammable liquids and combustible liquids in buildings, structures and open areas where flammable liquids and combustible liquids are processed, stored, handled and used.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

A2. This also applies to dangerous goods in packages or containers in quantities greater than those shown in Table 3.2.7.1.: per fire compartment, when stored indoors, as required in Article 3.2.7.11., and per individual storage area, when stored outdoors, as required in Article 3.3.2.13.

Exception: except as stated in
- Sentence 3.1.1.4.(1), which applies to Class 2 gas manufacturing and dispensing facilities, and
- Sentence 3.3.1.1.(2), which applies to certain outdoor storage.

Intent

I1. To limit the probability that the escape of liquids or dangerous goods will lead to a fire or to the spread of fire, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Spill control maintenance and operating procedures for flammable liquids and combustible liquids in buildings, structures and open areas where flammable liquids and combustible liquids are processed, stored, handled and used.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

A2. This also applies to dangerous goods in packages or containers in quantities greater than those shown in Table 3.2.7.1.:
- per fire compartment, when stored indoors, as required in Article 3.2.7.11., and
- per individual storage area, when stored outdoors, as required in Article 3.3.2.13.

Exception:
- except as stated in Sentence 3.1.1.4.(1), which applies to Class 2 gas manufacturing and dispensing facilities, and
- Sentence 3.3.1.1.(2), which applies to certain outdoor storage.

11. To limit the probability that the escape of liquids or dangerous goods will lead to a fire or to the spread of fire, which could lead to harm to persons, including emergency responders, in other parts of the building, adjacent buildings or adjacent outdoor areas.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Spill control maintenance and operating procedures for flammable liquids and combustible liquids in buildings, structures and open areas where flammable liquids and combustible liquids are processed, stored, handled and used.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

A2. This also applies to dangerous goods in packages or containers in quantities greater than those shown in Table 3.2.7.1.:
- per fire compartment, when stored indoors, as required in Article 3.2.7.11., and
- per individual storage area, when stored outdoors, as required in Article 3.3.2.13.

Exception:
- except as stated in Sentence 3.1.1.4.(1), which applies to Class 2 gas manufacturing and dispensing facilities, and
- Sentence 3.3.1.1.(2), which applies to certain outdoor storage.

I1. To limit the probability that the escape of liquid or dangerous goods will lead to a fire or to the spread of fire, which could lead to harm to persons, including emergency responders, in other parts of the building, adjacent buildings or adjacent outdoor areas.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

A1. Spill recovery and contaminated soil remediation measures for flammable liquids and combustible liquids in buildings, structures and open areas.

Exception: except as provided in Sentence (3), all reasonable steps shall be taken to recover escaped liquid and to remove or treat contaminated soil.

A2. This also applies to dangerous goods in packages or containers in quantities greater than those shown in Table 3.2.7.1.: per fire compartment, when stored indoors, as required in Article 3.2.7.11., and per individual storage area, when stored outdoors, as required in Article 3.3.2.13.

Exception: except as stated in Sentence 3.1.1.4.(1), which applies to Class 2 gas manufacturing and dispensing facilities, and Sentence 3.3.1.1.(2), which applies to certain outdoor storage.

I1. To limit the probability that the escape of liquid or dangerous goods will lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Spill recovery and contaminated soil remediation measures for flammable liquids and combustible liquids in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.1.6.3.(3), which applies to methods of disposal of spilled or leaked flammable liquids or combustible liquids,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to:
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

A2. This also applies to dangerous goods in packages or containers in quantities greater than those shown in Table 3.2.7.1.:
- per fire compartment, when stored indoors, as required in Article 3.2.7.11., and
- per individual storage area, when stored outdoors, as required in Article 3.3.2.13.

Exception:
- except as stated in:
  - Sentence 3.1.1.4.(1), which applies to Class 2 gas manufacturing and dispensing facilities, and
  - Sentence 3.3.1.1.(2), which applies to certain outdoor storage.

Intent
I1. To limit the probability that the escape of liquid or dangerous goods will lead to a fire or to the spread of fire, which could lead to damage to the building or facility.
Application and intent of Division B provisions

2) Except as provided in Sentence (3), all reasonable steps shall be taken to recover escaped liquid and to remove or treat contaminated soil.

Application

A1. Spill recovery and contaminated soil remediation measures for flammable liquids and combustible liquids in buildings, structures and open areas.

Exception: except as stated in
- Sentence 4.1.6.3.(3), which applies to methods of disposal of spilled or leaked flammable liquids or combustible liquids,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

A2. This also applies to dangerous goods in packages or containers in quantities greater than those shown in Table 3.2.7.1.:
- per fire compartment, when stored indoors, as required in Article 3.2.7.11., and
- per individual storage area, when stored outdoors, as required in Article 3.3.2.13.

Exception: except as stated in
- Sentence 3.1.1.4.(1), which applies to Class 2 gas manufacturing and dispensing facilities, and
- Sentence 3.3.1.1.(2), which applies to certain outdoor storage.

Intent

I1. To limit the probability that the escape of liquid or dangerous goods will lead to a fire or to the spread of fire, which could lead to harm to persons, including emergency responders.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Disposal of absorbent and spill removal measures for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

A2. This also applies to dangerous goods in packages or containers in quantities greater than those shown in Table 3.2.7.1.:
- per fire compartment, when stored indoors, as required in Article 3.2.7.11., and
- per individual storage area, when stored outdoors, as required in Article 3.3.2.13.

Exception:
- except as stated in Sentence 3.1.1.4.(1), which applies to per fire compartment, when stored indoors, as required in Article 3.2.7.11., and
- facilities operated by manufacturers or distributors handling gas dispensing stations, and
- Sentence 3.3.1.1.(2), which applies to certain outdoor storage.

Intent
I1. To limit the probability that absorbent used to clean up the spilled liquid will be ignited, which could lead to harm to persons.
I2. To limit the probability that absorbent used to clean up the spilled liquid will lead to a fire or to the spread of fire, which could lead to harm to persons.
Application and intent of Division B provisions

CodeReference (including record number) 4.1.6.3.(3)-02
Attribution - functional statement/objective F44-OP1.1,OP1.2 and F02-OP1.1,OP1.2

Application

A1. Disposal of absorbent and spill removal measures for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - the storage of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

A2. This also applies to dangerous goods in packages or containers in quantities greater than those shown in Table 3.2.7.1.:
- per fire compartment, when stored indoors, as required in Article 3.2.7.11., and
- per individual storage area, when stored outdoors, as required in Article 3.3.2.13.

Exception:
- except as stated in
  - Sentence 3.1.1.4.(1), which applies to the storage and dispensing of Class 2 flammable gases at fuel-dispensing stations, and
  - facilities operated by manufacturers or distributors [handling or storing more than 1 500 kg, as stated in Appendix Note A-3.1.1.4.(1)(a)] of Class 2 gases, and

Intent

I1. To limit the probability that the escape of liquids or dangerous goods will lead to a fire or to the spread of fire, which could lead to damage to the building or facility.

I2. To limit the probability that the absorbent used to clean up the spilled liquid will lead to a fire or to the spread of fire, which could lead to damage to the building or facility.

CodeText
4) Flammable liquids and combustible liquids that are to be disposed of as waste shall be stored in a storage tank or closed container conforming to this Part until they are removed from the premises.

Application
A1. Temporary storage in a storage tank or closed container of waste flammable liquids and combustible liquids.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent
I1. To limit the probability of improper or careless disposal of waste flammable liquids or waste combustible liquids, which could lead to the escape of a flammable liquid or a combustible liquid, which could lead to harm to persons.
Application and intent of Division B provisions

**Application**

A1. Action to be taken in the event of loss of flammable liquid or combustible liquid arising from a spill or leak.

**Exception:**
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

**CodeText**

1) When a loss of flammable liquid or combustible liquid occurs due to a spill or leak, or as indicated by any of the leak detection measures in Section 4.4., the owner shall ensure that:

a) appropriate action is taken as required in Sentences 4.1.6.3.(2) and (3), and Sentence 4.4.1.3.(1), and

b) if the quantity of liquid spilled or leaked exceeds 50 L in aggregate or is sufficient to cause a sheen on nearby surface water

1. the fire department shall be notified immediately, and

2. the authority having jurisdiction shall be notified in writing within 24 h.

**Intent**

To direct the Alberta Fire Code 2006 user to Sentences 4.1.6.3.(2) and (3), and 4.4.1.3.(1).
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Action to be taken in the event of loss of flammable liquid or combustible liquid arising from a spill or leak whenever the quantity of liquid spilled or leaked exceeds 50 L in aggregate or is sufficient to cause a sheen on nearby surface water.

Exception:

- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To enable the fire department and the authority having jurisdiction to monitor action taken to clean up the spill or leak.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Notification of the authority having jurisdiction and the fire department of the occurrence of a leak of flammable liquid or combustible liquid that

- is based on analysis or other evidence of flammable liquid or combustible liquid in a water well, or
- indicates the presence of free or dissolved flammable liquid or combustible liquid in soil, groundwater, surface water, sewer lines, utility lines, water supply lines, basements, crawl space or on the ground surface.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”.
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent
I1. To enable the authority having jurisdiction and the fire department to assess the extent of spread of the flammable or combustible liquid and determine and initiate appropriate remedial action.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

CodeReference (including record number) 4.1.7.1.(1)-01
Attribution - functional statement/objective F01-OS1.1

Application

A1. Exhaust ventilation in rooms or enclosed spaces where flammable liquids and combustible liquids are processed, handled, stored, dispensed or used within rooms or enclosed spaces, ventilation shall conform to this Part and the Alberta Building Code 2006. (See Appendix A.)

Exception:

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquefied petroleum deposits within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Exception:

except as otherwise provided in Part 5 for special processes and operations [e.g. spray coating].

A2. This also applies, as required in Clause 3.2.8.2.(1)(e), to dedicated storage rooms for cylinders of Class 2.1 flammable gases.

Exception:

except
- where the quantities in a single fire compartment do not exceed 25 kg in the case of heavier-than-air gases,
- where the quantities in a single fire compartment do not exceed those permitted in Sentence 3.2.8.2.(2) in the case of lighter-than-air gases,
- as stated in Sentence 3.1.1.4.(1), which applies to Class 2 gas manufacturing and dispensing facilities, and
- for aerosols covered in Subsection 3.2.5.

Intent

I1. To limit the probability that vapours will accumulate, which could lead to their ignition from a nearby ignition source, which could lead to harm to persons.

Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Continuous mechanical ventilation in rooms or enclosed spaces where Class I liquids are processed, dispensed or used in a manner that releases flammable vapours into the room or enclosed space.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.6.1.(1), which applies to distilleries,
- Sentence 5.4.1.2.(1), which applies to industrial ovens,
- Subsection 5.5.4., which applies to laboratories.

A2. This also applies, as required in Clause 3.2.8.2.(1)(e), to dedicated storage rooms for cylinders of Class 2 flammable gases.

Exception:
- except where the quantities in a single fire compartment do not exceed 25 kg, in the case of heavier-than-air gases,
- where the quantities in a single fire compartment do not exceed those permitted in Sentence 3.2.8.2.(2), in the case of lighter-than-air gases,
- as stated in Sentence 3.1.1.4.(1), which applies to Class 2 gas manufacturing and dispensing facilities, and
- for aerosols covered in Subsection 3.2.5.

Intent
H1. To limit the probability that vapours will accumulate, which could lead to their ignition from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

A1. Natural or continuous mechanical exhaust ventilation required in Subclause 4.1.7.2.(1)(b)(i) for the storage of Class I liquids, in rooms or enclosed spaces where
- storage consists only of closed containers, and
- no dispensing operations are performed.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.6.1.(1), which applies to distilleries,
- Sentence 5.4.1.2.(1), which applies to industrial ovens,
- Subsection 5.5.4., which applies to laboratories.

A2. This also applies, as required in Clause 3.2.8.2.(1)(e), to dedicated storage rooms for cylinders of Class 2.1 flammable gases.

Exception:
- where the quantities in a single fire compartment do not exceed 25 kg, in the case of heavier-than-air gases,
- where the quantities in a single fire compartment do not exceed those permitted in Sentence 3.2.8.2.(2), in the case of lighter-than-air gases,
- as stated in Sentence 3.1.1.4.(1), which applies to Class 2 gas manufacturing and dispensing facilities, and
- for aerosols covered in Subsection 3.2.5.

Intent
I1. To exempt certain storage from the application of Clause 4.1.7.2.(1)(b) if certain conditions are met.

This is to limit the probability that vapour will be released, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Minimum exhaust capacity of ventilation systems in rooms or enclosed spaces and where Class I liquids are stored.

Exception:
except where
- the storage consists only of closed containers and no dispensing operations are performed, and
- Class I or II liquids are processed, dispensed or used.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.9.3.4.(1), which applies to processing buildings,
- Sentence 4.10.6.1.(1), which applies to distilleries,
- Sentence 5.4.6.2.(1), which applies to dipping processes.

A2. This also applies, as required in Clause 3.2.8.2.(1)(e), to dedicated storage rooms for cylinders of Class 2.1 flammable gases.

Exception:
except
- where the quantities in a single fire compartment do not exceed 25 kg, in the case of heavier-than-air gases,
- where the quantities in a single fire compartment do not exceed those permitted in Sentence 3.2.8.2.(2), in the case of lighter-than-air gases,
- as stated in Sentence 3.1.1.4.(1), which applies to:
  - the storage and dispensing of Class 2.1 flammable gases at fuel-dispensing stations, and
  - facilities operated by manufacturers or distributors [handling or storing more than 1 500 kg, as stated in Appendix Note A-3.1.1.4.(1)(a)] of Class 2 gases, and
- for aerosols covered in Subsection 3.2.5.

Intent
I1. To limit the probability that vapour will accumulate and be subsequently ignited from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

4.1.7.2.(4)-01

Attribution - functional statement/objective F01-OS1.1

CodeText

4) Where a mechanical ventilation system is installed to meet the conditions of Sentence (3), it shall be capable of exhausting at least 18 m$^3$/h per square metre of room area, but not less than 250 m$^3$/h.

Application

A1. Minimum exhaust capacity of ventilation systems in rooms with a low floor-to-ceiling height or small enclosed spaces where Class I liquids are stored.

Exception:
- the storage consists only of closed containers and no dispensing operations are performed, and
- Class I or II liquids are processed, dispensed or used.

Exception: except where
- the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of the Canada/CSA-B139,
- the storage or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 5.3.2.1.(1), which applies to distilleries,
- Sentence 3.1.3.2.(3) which applies to spray booths,
- Sentence 5.4.5.2.(1), which applies to automobile undercoating.

A2. This also applies, as required in Clause 3.2.8.2.(1)(e), to dedicated storage rooms for cylinders of Class 2.1 flammable gases.

Exception:
- except where the quantities in a single fire compartment do not exceed 25 kg, in the case of heavier-than-air gases,
- where the quantities in a single fire compartment do not exceed those permitted in Sentence 3.2.8.2.(2), in the case of lighter-than-air gases,
- as stated in Sentence 3.1.1.4.(1), which applies to:
  - the storage and dispensing of Class 2.1 flammable gases at fuel-dispensing stations, and
  - facilities operated by manufacturers or distributors [handling or storing more than 1 500 kg, as stated in Appendix Note A-3.1.1.4.(1)(a)] of Class 2 gases, and
- for aerosols covered in Subsection 3.2.5.

Intent

11. To limit the probability that vapour will accumulate and be subsequently ignited from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Construction of exhaust ventilation systems for power-ventilated enclosures, in rooms or enclosed spaces where Class I liquids are stored.

Exception:
- the storage consists only of closed containers and no dispensing operations are performed, and
- Class I or II liquids are processed, dispensed or used.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

A2. This also applies, as required in Clause 3.2.8.2.(1)(e), to dedicated storage rooms for cylinders of Class 2.1 flammable gases.

Exception:
- except where the quantities in a single fire compartment do not exceed 25 kg, in the case of heavier-than-air gases,
- where the quantities in a single fire compartment do not exceed those permitted in Sentence 3.2.8.2.(2), in the case of lighter-than-air gases,
- as stated in Sentence 3.1.1.4.(1), which applies to: the storage and dispensing of Class 2.1 flammable gases at fuel-dispensing stations, and facilities operated by manufacturers or distributors [handling or storing more than 1 500 kg, as stated in Appendix Note A-3.1.1.4.(1)(a)] of Class 2 gases, and
- for aerosols covered in Subsection 3.2.5.

Intent
I1. To limit the probability that sparks or heat generated by the ventilation system will ignite vapours, particles or deposits, which could lead to a fire or explosion, which could lead to harm to persons.
I2. To limit the probability that combustible construction will increase the severity of a fire, which could lead to the spread of fire to other parts of the building, which could lead to harm to persons.
A1. Construction of exhaust ventilation systems for power-ventilated enclosures, in rooms or enclosed spaces where Class I liquids are stored.

Exception:
except where
- the storage consists only of closed containers and no dispensing operations are performed, and
- Class I or II liquids are processed, dispensed or used.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

A2. This also applies, as required in Clause 3.2.8.2.(1)(e), to dedicated storage rooms for cylinders of Class 2.1 flammable gases.

Exception:
except where
- the quantities in a single fire compartment do not exceed 25 kg, in the case of heavier-than-air gases,
- the quantities in a single fire compartment do not exceed those permitted in Sentence 3.2.8.2.(2), in the case of lighter-than-air gases,
- as stated in Sentence 3.1.1.4.(1), which applies to:
  - the storage and dispensing of Class 2.1 flammable gases at fuel-dispensing stations, and
  - facilities operated by manufacturers or distributors [handling or storing more than 1 500 kg, as stated in Appendix Note A-3.1.1.4.(1)(a)] of Class 2 gases, and
- for aerosols covered in Subsection 3.2.5.

I1. To limit the probability that combustible construction will increase the severity of a fire, which could lead to the spread of fire to other parts of the building, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Interlocks for continuous mechanical exhaust ventilation in rooms or enclosed spaces where Class I liquids are stored.

Exception: except where
- the storage consists only of closed containers and no dispensing operations are performed, and
- Class I or II liquids are processed, dispensed or used.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

A2. This also applies, as required in Clause 3.2.8.2.(1)(e), to dedicated storage rooms for cylinders of Class 2.1 flammable gases.

Exception: except
- where the quantities in a single fire compartment do not exceed 25 kg, in the case of heavier-than-air gases,
- where the quantities in a single fire compartment do not exceed those permitted in Sentence 3.2.8.2.(2), in the case of lighter-than-air gases,
- as stated in Sentence 3.1.1.4.(1), which applies to:
  - the storage and dispensing of Class 2.1 flammable gases at fuel-dispensing stations, and
  - facilities operated by manufacturers or distributors [handling or storing more than 1 500 kg, as stated in Appendix Note A-3.1.1.4.(1)(a)] of Class 2 gases, and
- for aerosols covered in Subsection 3.2.5.

I1. To limit the probability that vapour will accumulate and be subsequently ignited from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

A1. Audible alarms – located in attended areas – for continuous mechanical exhaust ventilation systems in rooms or enclosed spaces where Class I liquids are stored.

Exception:
- except where
  - the storage consists only of closed containers and no dispensing operations are performed, and
  - Class I or II liquids are processed, dispensed or used.

Exception:
- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

A2. This also applies, as required in Clause 3.2.8.2.(1)(e), to dedicated storage rooms for cylinders of Class 2.1 flammable gases.

Exception:
- except
  - where the quantities in a single fire compartment do not exceed 25 kg, in the case of heavier-than-air gases,
  - where the quantities in a single fire compartment do not exceed those permitted in Sentence 3.2.8.2.(5), in the case of lighter-than-air gases,
  - as stated in Sentence 3.1.1.4.(1), which applies to: the storage and dispensing of Class 2.1 flammable gases at fuel-dispensing stations, and facilities operated by manufacturers or distributors [handling or storing more than 1 500 kg, as stated in Appendix Note A-3.1.1.4.(1)(a)] of Class 2 gases, and
  - for aerosols covered in Subsection 3.2.5.

Intent
I1. To limit the probability of persons not being alerted to the buildup of vapour, which could lead to a delay in taking appropriate action, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

1) Ventilation air inlets and outlets within a room or enclosed space referred to in Article 4.1.7.1. shall be arranged in conformance with Sentences (2) and (3).

Application

A1. Air inlets and outlets for natural and mechanical exhaust ventilation systems in rooms or enclosed spaces where flammable liquids or combustible liquids are processed, handled, stored or dispensed.

Exception:

except where the storage consists only of closed containers and no dispensing operations are performed

Exception:

except as stated in:

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.6.1.(1), which applies to distilleries,
- Sentence 5.4.5.2.(1), which applies to spray coating operations and automobile undercoating,
- Subsection 5.5.4., which applies to laboratories.

A2. This also applies, as required in Clause 3.2.8.2.(1)(e), to dedicated storage rooms for cylinders of Class 2.1 flammable gases.

Exception:

except:

- where the quantities in a single fire compartment do not exceed 25 kg in the case of heavier-than-air gases,
- where the quantities in a single fire compartment do not exceed those permitted in Sentence 3.2.8.2.(2) in the case of lighter-than-air gases,
- as stated in Sentence 3.1.1.4.(1), which applies to Class 2 gas manufacturing and dispensing facilities, and
- for aerosols covered in Subsection 3.2.5.

Intent

I1. To direct Alberta Fire Code 2006 users to Sentences 4.1.7.3.(2) and 4.1.7.3.(3).
Application and intent of Division B provisions

A1. Location of air inlets and outlets for natural and mechanical exhaust ventilation systems for heavier-than-air flammable vapours in rooms or enclosed spaces where flammable liquids or combustible liquids are processed, handled, stored or dispensed.

Exception:
except where the storage consists only of closed containers and no dispensing operations are performed.

Exception:
except as stated in:
- Sentence 4.1.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.6.1.(1), which applies to distilleries,
- Sentence 5.4.5.2.(1), which applies to spray coating operations and automobile undercoating,
- Subsection 5.5.4., which applies to laboratories.

A2. This also applies, as required in Clause 3.2.8.2.(1)(e), to dedicated storage rooms for cylinders of Class 2.1 flammable gases.

Exception:
except as stated in:
- where the quantities in a single fire compartment do not exceed 25 kg in the case of heavier-than-air gases,
- where the quantities in a single fire compartment do not exceed those permitted in Sentence 3.2.8.2.(2) in the case of lighter-than-air gases,
- as stated in Sentence 3.1.1.4.(1), which applies to Class 2 gas manufacturing and dispensing facilities, and
- for aerosols covered in Subsection 3.2.5.

I1. To limit the probability that vapour will accumulate and be subsequently ignited from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.1.7.3.(3)-01
Attribution - functional statement/objective F01-O5.1.1

3) Where the flammable vapour being removed is lighter than air, 
a) at least one air inlet shall be located at a point near a wall, and no lower than 300 mm from the 
celling, and 
b) at least one air outlet shall be located near the opposite wall, no lower than 300 mm from the 
celling.

Application

A1. Location of air inlets and outlets for natural and mechanical exhaust ventilation systems for 
lighter than air flammable vapours in rooms or enclosed spaces where flammable liquids or 
combustible liquids are processed, handled, stored or dispensed.

Exception: 
except where the storage consists only of closed containers and no dispensing operations are 
performed.

Exception: 
except as stated in 
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants, 
- Sentence 4.1.1.1.(3), which applies to 
  - the transportation of flammable liquids or combustible liquids under the “Transportation of 
    Dangerous Goods Regulations”, 
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139, 
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on 
    isolated construction projects, 
  - the storage of aerosol products covered under Subsection 3.2.5., 
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas 
    regulations made pursuant to the Safety Codes Act, 
  - the production, storage or handling of liquefied natural gas within the scope of the gas 
    regulations made pursuant to the Safety Codes Act, 
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash 
    points but that may be flammable under certain conditions, and 
  - the storage and handling of raw production flammable liquids or combustible liquids and the 
    incidental storage and handling of hydrocarbon-based chemicals resulting from or used during 
    crude oil or natural gas exploration, production or transmission as mandated under the scope 
    of EUB Guide 55, 
  - Sentence 4.10.6.1.(1), which applies to distilleries, 
  - Sentence 5.4.5.2.(1), which applies to spray coating operations and automobile undercoating, 
  - Subsection 5.5.4., which applies to laboratories.

A2. This also applies, as required in Clause 3.2.8.2.(1)(e), to dedicated storage rooms for cylinders 
of Class 2.1 flammable gases.

Exception: 
except as stated in 
- where the quantities in a single fire compartment do not exceed 25 kg in the case of heavier-
  than-air gases, 
- where the quantities in a single fire compartment do not exceed those permitted in Sentence 
  3.2.8.2.(2) in the case of lighter-than-air gases, 
- as stated in Sentence 3.1.1.4.(1), which applies to Class 2 gas manufacturing and dispensing 
  facilities, and 
- for aerosols covered in Subsection 3.2.5.

Intent

I1. To limit the probability that vapour will accumulate and be subsequently ignited from a nearby 
ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Location of exhaust air discharge point for mechanical exhaust ventilation systems in rooms or enclosed spaces where
- Class I liquids are stored, processed, dispensed, or used, except for storage that consists only of closed containers and no dispensing operations are performed, or
- Class I or II liquids are processed, dispensed or used.

Exception: where exhaust air is recirculated into the building as provided in Article 4.1.7.6.

A2. This also applies, as required in Clause 3.2.8.2.(1)(e), to dedicated storage rooms for cylinders of Class 2.1 flammable gases.

Intent

I1. To limit the probability that vapour will be returned into the building through building openings located near exhaust air discharge points, which could lead to the accumulation and subsequent ignition of vapours by a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Application
A1. Location of exhaust air discharge point for mechanical exhaust ventilation systems in rooms or enclosed spaces where:
- Class I liquids are stored, processed, dispensed, or used, except for storage that consists only of closed containers and no dispensing operations are performed, or
- Class I or II liquids are processed, dispensed or used.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Article 4.1.7.6., which applies where exhaust air is recirculated into the building,
- Sentence 5.4.1.2.(1), which applies to industrial ovens,

A2. This also applies, as required in Clause 3.2.8.2.(1)(e), to dedicated storage rooms for cylinders of Class 2.1 flammable gases.

Exception:
except where the quantities in a single fire compartment do not exceed 25 kg in the case of heavier-than-air gases, and
- where the quantities in a single fire compartment do not exceed those permitted in Sentence 3.2.8.2.(2) in the case of lighter-than-air gases, and
- as stated in Sentence 3.1.1.4.(1), which applies to Class 2 gas manufacturing and dispensing facilities, and
- for aerosols covered in Subsection 3.2.5.

Intent
I1. To limit the probability that discharged vapour will be ignited by an ignition source outside the room or space, which could lead to harm to persons.

I2. To limit the probability that a fire involving vapours will spread outside the room or space and into building openings facing the exhaust air discharge points, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.1.7.4.(1)-03
Attribution - functional statement/objective F03-OP1.2

Application

A1. Location of exhaust air discharge point for mechanical exhaust ventilation systems in rooms or enclosed spaces where:
- Class I liquids are stored, processed, dispensed, or used, except for storage that consists only of closed containers and no dispensing operations are performed, or
- Class I or II liquids are processed, dispensed or used.

Exception:
- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Article 4.1.7.6., which applies where exhaust air is recirculated into the building,
  - Sentence 5.4.1.2.(1), which applies to industrial ovens,

A2. This also applies, as required in Clause 3.2.8.2.(1)(e), to dedicated storage rooms for cylinders of Class 2.1 flammable gases.

Exception:
- where the quantities in a single fire compartment do not exceed 25 kg in the case of heavier-than-air gases,
- where the quantities in a single fire compartment do not exceed those permitted in Sentence 3.2.8.2.(2) in the case of lighter-than-air gases,
- as stated in Sentence 3.1.1.4.(1), which applies to Class 2 gas manufacturing and dispensing facilities, and
- for aerosols covered in Subsection 3.2.5.

Intent
I1. To limit the probability that a fire involving vapour will spread outside the room or space and into building openings facing the exhaust air discharge points, which could lead to damage to the building.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Location of exhaust air discharge point for mechanical exhaust ventilation systems in rooms or enclosed spaces where:
- Class I liquids are stored, processed, dispensed, or used, except for storage that consists only of closed containers and no dispensing operations are performed, or
- Class I or II liquids are processed, dispensed or used.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Article 4.1.7.6., which applies where exhaust air is recirculated into the building,
- Sentence 5.4.1.2.(1), Which applies to industrial ovens,

A2. This also applies, as required in Clause 3.2.8.2.(1)(e), to dedicated storage rooms for cylinders of Class 2.1 flammable gases.

Exception:
- where the quantities in a single fire compartment do not exceed 25 kg in the case of heavier-than-air gases,
- where the quantities in a single fire compartment do not exceed those permitted in Sentence 3.2.8.2.(2) in the case of lighter-than-air gases,
- as stated in Sentence 3.1.1.4.(1), which applies to Class 2 gas manufacturing and dispensing facilities, and
- for aerosols covered in Subsection 3.2.5.

Intent
I1. To limit the probability that a fire involving vapour will spread outside the room or space and into adjacent building openings facing the exhaust air discharge points, which could lead to damage to the adjacent buildings.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.1.7.5.(1)-01
Attribution - functional statement/objective F03-OP.1.2

Application

A1. Make-up air inlets located in an interior wall, for mechanical exhaust ventilation systems in rooms or enclosed spaces where Class I liquids are stored.

Exception:
- the storage consists only of closed containers and no dispensing operations are performed, and
- Class I or II liquids are processed, dispensed or used.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

A2. This also applies, as required by Clause 3.2.8.2.(1)(e), to dedicated storage rooms for cylinders of Class 2.1 flammable gases.

Exception:
- where the quantities in a single fire compartment do not exceed 25 kg, in the case of heavier-than-air gases, as stated in Sentence 3.2.7.1.(1),
- where the quantities in a single fire compartment do not exceed those permitted in Sentence 3.2.8.2.(2), in the case of lighter-than-air gases,
- as stated in Sentence 3.1.1.4.(1), which applies to:
  - the storage and dispensing of Class 2.1 flammable gases at fuel-dispensing stations, and
  - facilities operated by manufacturers or distributors handling or storing more than 1 500 kg, as stated in Appendix Note A-3.1.1.4.(1)(a) of Class 2 gases,
- for aerosols covered in Subsection 3.2.5., and
- as stated in Clause 3.2.8.2.(1)(c), which applies to access to dedicated storage rooms.

Intent

I1. To limit the probability that the suction effect of the mechanical ventilation system will lead to a fire outside the room or space being drawn inside the room or space through the make-up air inlets, which could lead to the spread of fire into the room or space, which could lead to damage to the building.

I2. To limit the probability that a fire inside the room or space will spread through the make-up air inlets to other parts of the building, which could lead to damage to the building.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

1) Subject to the provisions in Clause 3.2.8.2.(1)(c), where make-up air for a mechanical ventilation system is taken from within the building, the opening into the room or enclosed space shall be provided with a fire damper.

Application

A1. Make-up air inlets located in an interior wall, for mechanical exhaust ventilation systems in rooms or enclosed spaces where Class I liquids are stored.

Exception:
except where
- the storage consists only of closed containers and no dispensing operations are performed, and
- Class I or II liquids are processed, dispensed or used.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

A2. This also applies, as required by Clause 3.2.8.2.(1)(e), to dedicated storage rooms for cylinders of Class 2.1 flammable gases.

Exception:
except
- where the quantities in a single fire compartment do not exceed 25 kg, in the case of heavier-than-air gases, as stated in Sentence 3.2.8.2.(2),
- where the quantities in a single fire compartment do not exceed those permitted in Sentence 3.2.8.2.(2), in the case of lighter-than-air gases,
- as stated in Sentence 3.1.1.4.(1), which applies to:
- the storage and dispensing of Class 2.1 flammable gases at fuel-dispensing stations, and
- facilities operated by manufacturers or distributors [handling or storing more than 1 500 kg, as stated in Appendix Note A-3.1.1.4.(1)(a)] of Class 2 gases,
- for aerosols covered in Subsection 3.2.5., and
- as stated in Clause 3.2.8.2.(1)(c), which applies to access to dedicated storage rooms.

Intent

I1. To limit the probability that the suction effect of the mechanical ventilation system will lead to a fire outside the room or space being drawn inside the room or space through the make-up air inlets, which could lead to the spread of fire into the room or space, which could lead to harm to persons.

I2. To limit the probability that a fire inside the room or space will spread through the make-up air inlets to other parts of the building, which could lead to harm to persons.
Application and intent of Division B provisions

A1. Location of make-up air inlets for natural and mechanical exhaust ventilation systems in rooms or enclosed spaces where
- Class I liquids are stored, except where the storage consists only of closed containers and no dispensing operations are performed, or
- Class I or II liquids are processed, dispensed or used.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 5.4.1.2.(1), which applies to industrial ovens.

A2. This also applies, as required in Clause 3.2.8.2.(1)(e), to dedicated storage rooms for cylinders of Class 2.1 flammable gases.

Exception: except:
- where the quantities in a single fire compartment do not exceed 25 kg in the case of heavier-than-air gases,
- where the quantities in a single fire compartment do not exceed those permitted in Sentence 3.2.8.2.(2) in the case of lighter-than-air gases,
- as stated in Sentence 3.1.1.4.(1), which applies to Class 2 gas manufacturing and dispensing facilities, and
- for aerosols covered in Subsection 3.2.5.

Intent

11. To limit the probability that vapour will be returned into the room or space through make-up air inlets located near exhaust air outlets, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.1.7.5.(3)-01
Attribution - functional statement/objective F01.F44-OS1.2

Application

A1. Location of make-up air inlets for natural exhaust ventilation systems in rooms or enclosed spaces where
- Class I liquids are stored, except where the storage consists only of closed containers and no dispensing operations are performed, or
- Class I or II liquids are processed, dispensed or used.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

A2. This also applies, as required in Clause 3.2.8.2.(1)(e), to dedicated storage rooms for cylinders of Class 2.1 flammable gases.

Exception:
except
- where the quantities in a single fire compartment do not exceed 25 kg in the case of heavier-than-air gases,
- where the quantities in a single fire compartment do not exceed those permitted in Sentence 3.2.8.2.(2) in the case of lighter-than-air gases,
- as stated in Sentence 3.1.1.4.(1), which applies to Class 2 gas manufacturing and dispensing facilities, and
- for aerosols covered in Subsection 3.2.5.

Intent

I1. To limit the probability that vapour will migrate outside the room or space through make-up air inlets located in an interior wall, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.1.7.6.(1)-01
Attribution - functional statement/objective F01-OS1.1

CodeText

1) Where a mechanical ventilation system is installed in conformance with Article 4.1.7.2., and where exhaust air is recirculated, a fail-safe vapour detection and alarm system shall be provided

a) to continuously monitor the flammable vapour concentration in the exhaust air, and

b) if the vapour concentration in Clause (a) exceeds 25% of the lower explosive limit of the vapour, to

i) sound an alarm in an attended area,

ii) stop the recirculation of air, and

iii) redirect the exhaust air to an outdoor location.

Application

A1. Recirculation of exhaust air from mechanical ventilation systems required in Article 4.1.7.2., and where

- the flammable vapour concentration in the exhaust air is continuously monitored,

- interlocks are provided so that if the concentration exceed 25% of the lower explosive limit, an alarm is sounded, recirculation is stopped and exhaust air is directed outside the building, and

- Class I liquids are stored.

Exception:

except where the storage consists only of closed containers and no dispensing operations are performed, or Class I or II liquids are processed, dispensed or used.

Exception:

except as stated in

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,

- Sentence 4.1.1.1.(3), which applies to

  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,

  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,

  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,

  - the storage of aerosol products covered under Subsection 3.2.5.,

  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,

  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,

  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and

  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

A2. This also applies, as required in Clause 3.2.8.2.(1)(e), to dedicated storage rooms for cylinders of Class 2.1 flammable gases.

Exception:

except

- where the quantities in a single fire compartment do not exceed 25 kg in the case of heavier-than-air gases,

- where the quantities in a single fire compartment do not exceed those permitted in Sentence 3.2.8.2.(2) in the case of lighter-than-air gases,

- as stated in Sentence 3.1.1.4.(1), which applies to Class 2 gas manufacturing and dispensing facilities, and

- for aerosols covered in Subsection 3.2.5.

Intent

I1. To remove the obligation, in Sentences 4.1.7.4.(1) and 5.4.5.2.(1), for exhaust air to be discharged outside the building and to permit its recirculation inside the building if a fail-safe system is provided.

This is to limit the probability that vapour will accumulate, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference: F11.F01-OS1.1

Attribution - functional statement/objective

4.1.7.6.(1)-02

1) Where a mechanical ventilation system is installed in conformance with Article 4.1.7.2., and where exhaust air is recirculated, a fail-safe vapour detection and alarm system shall be provided:
   a) to continuously monitor the flammable vapour concentration in the exhaust air, and
   b) if the vapour concentration in Clause (a) exceeds 25% of the lower explosive limit of the vapour,
      i) sound an alarm in an attended area,
      ii) stop the recirculation of air, and
      iii) redirect the exhaust air to an outdoor location.

Application

A1. Recirculation of exhaust air from mechanical ventilation systems required in Article 4.1.7.2., and where:
   - the flammable vapour concentration in the exhaust air is continuously monitored,
   - interlocks are provided so that if the concentration exceed 25% of the lower explosive limit, an alarm is sounded, recirculation is stopped and exhaust air is directed outside the building, and
   - Class I liquids are stored.

Exception:
   except where the storage consists only of closed containers and no dispensing operations are performed, or Class I or II liquids are processed, dispensed or used.

Exception:
   except as stated in:
   - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
   - Sentence 4.1.1.1.(3), which applies to:
     - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
     - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
     - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
     - the storage of aerosol products covered under Subsection 3.2.5.,
     - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
     - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
     - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
     - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

A2. This also applies, as required in Clause 3.2.8.2.(1)(e), to dedicated storage rooms for cylinders of Class 2.1 flammable gases.

Exception:
   except:
   - where the quantities in a single fire compartment do not exceed 25 kg in the case of heavier-than-air gases,
   - where the quantities in a single fire compartment do not exceed those permitted in Sentence 3.2.8.2.(2) in the case of lighter-than-air gases,
   - as stated in Sentence 3.1.1.4.(1), which applies to Class 2 gas manufacturing and dispensing facilities, and
   - for aerosols covered in Subsection 3.2.5.

Intent

I1. To limit the probability of persons not being alerted to the buildup of vapour, which could lead to a delay in taking appropriate action, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Ductwork of natural and mechanical ventilation systems in rooms or enclosed spaces where:
- Class I liquids are stored, except where the storage consists only of closed containers and no dispensing operations are performed, or
- Class I or II liquids are processed, dispensed or used.

Exception:
except as stated in:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

A2. This also applies, as required in Clause 3.2.8.2.(1)(e), to dedicated storage rooms for cylinders of Class 2.1 flammable gases.

Exception:
except where:
- the quantities in a single fire compartment do not exceed 25 kg in the case of heavier-than-air gases,
- the quantities in a single fire compartment do not exceed those permitted in Sentence 3.2.8.2.(2) in the case of lighter-than-air gases,
- as stated in Sentence 3.1.1.4.(1), which applies to Class 2 gas manufacturing and dispensing facilities, and
- for aerosols covered in Subsection 3.2.5.

Intent

I1. To limit the probability that vapour—either in the room or space or while being exhausted from the room or space—will come in contact with ignition sources within or conveyed by ventilation systems serving other areas, which could lead to the ignition of the vapour, which could lead to damage to the building.

I2. To limit the probability that vapour will migrate through the ventilation system to other areas of the building, which could lead to the accumulation and subsequent ignition of the vapour from a nearby ignition source, which could lead to damage to the building.

I3. To limit the probability that fire originating in the room or space will spread to other parts of the building, which could lead to damage to the building.
Application and intent of Division B provisions

1) All components of the ventilation system shall be kept free of obstructions that may interfere with its operation.

Application

A1. All components of natural and mechanical ventilation systems, including inlet and exhaust openings, in rooms or enclosed spaces where Class I liquids are stored.

Exception:

- the storage consists only of closed containers and no dispensing operations are performed, and
- Class I or Ii liquids are processed, dispensed or used.

Exception:

- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

A2. This also applies, as required by Clause 3.2.8.2.(1)(e), to dedicated storage rooms for cylinders of Class 2.1 flammable gases.

Exception:

- where the quantities in a single fire compartment do not exceed 25 kg, in the case of heavier-than-air gases, as stated in Sentence 3.2.7.1.(1),
- where the quantities in a single fire compartment do not exceed those permitted in Sentence 3.2.8.2.(2), in the case of lighter-than-air gases,
- as stated in Sentence 3.1.1.4.(1), which applies to:
  - the storage and dispensing of Class 2 flammable gases at fuel-dispensing stations, and
  - facilities operated by manufacturers or distributors [handling or storing more than 1,500 kg, as stated in Appendix Note A-3.1.1.4.(1)(a)] of Class 2 gases, and
- for aerosols covered in Subsection 3.2.5.

Intent

I1. To limit the probability that a reduction in the exhaust capacity of the ventilation system will lead to the accumulation of vapour, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

Attribution - functional statement/objective Not applicable

CodeText

1) Except as provided in Sentence 4.1.8.4.(1), flammable liquids and combustible liquids shall be kept in containers conforming to Subsection 4.2.3. or in storage tanks conforming to Subsection 4.3.1.

Application

A1. Storage of flammable liquids and combustible liquids in containers or storage tanks, in buildings, structures and open areas.

Exception:

- except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.1.8.4.(1), which applies to movable tanks.

Intent

11. To direct Alberta Fire Code 2006 users to Subsections 4.2.3. and 4.3.1.
Application and intent of Division B provisions

2) Containers and storage tanks for flammable liquids or combustible liquids shall be kept closed when not in use.

Application

A1. Containers and storage tanks, when not in use, for flammable liquids and combustible liquids in buildings, structures and open areas.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN-CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that vapour will be released, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons.

I2. To limit the probability that liquid will escape, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons.
A1. Filling of containers and storage tanks with flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

3) Containers and storage tanks shall not be filled beyond their safe filling level.

I1. To limit the probability that liquid will escape, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

A1. Transfer of Class I liquids from or into containers or storage tanks made of metallic or electrically conducting material, in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

A2. This also applies to the loading and unloading of tank vehicles, as required in Sentence 4.11.3.3.(1).

Intent
- To limit the probability that static electric charges will build up, which could lead to the ignition of nearby vapour, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Transfer of Class I liquids from or into containers or storage tanks made of non-electrically conducting material, in buildings, structures and open areas.

Exception:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- Appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- The storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- The storage of aerosol products covered under Subsection 3.2.5.,
- Liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- The production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- Liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- The storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

A2. This also applies to the loading and unloading of tank vehicles, as required in Sentence 4.11.3.3.(1).

Intent
1. To limit the probability that static electric charges will build up, which could lead to the ignition of nearby vapour, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

CodeReference (including record number) 4.1.8.2.(2)-01
Attribution - functional statement/objective F01-OS1.1

A1. Transfer of Class I liquids into storage tanks from the top of the tank, in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Clause 4.1.8.2.(3)(a), which applies when the conditions in the vapour space are such that it reduces the probability of the ignition of flammable vapours,
- Clause 4.1.8.2.(3)(b), which applies when the liquid being transferred has a minimum conductivity that reduces the probability of the accumulation of static electricity.

A2. This also applies to:
- the filling of tank vehicles and tank cars through open domes of bulk plants, as required in Sentence 4.7.4.6.(1), and
- the loading and unloading of tank vehicles, as required in Sentence 4.11.3.3.(1).

Intent
I1. To limit the probability that the free-fall or splashing of liquid as it enters the tank will lead to the buildup of static electric charges, which could lead to the ignition of vapour, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Transfer, in buildings, structures and open areas, of Class I liquids into storage tanks from the top of the tank and only when the tank vapour space cannot exceed 25% of the lower explosive limit, or is filled with an inert gas.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

A2. This also applies to the loading and unloading of tank vehicles, as required in Sentence 4.11.3.3.(1).

4.1.8.2.3) Sentence (2) shall not apply when
a) the storage tank vapour space cannot exceed 25% of the lower explosive limit or is filled with an inert gas that prevents the ignition of the vapour mixture, or
b) the liquid being transferred has a minimum conductivity that prevents the accumulation of static electricity (see Appendix A).

Application

I1. To remove from the application of Sentence 4.1.8.2.(2) cases where the conditions in the vapour space are such that they limit the probability of the ignition of vapour.

Not applicable
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Transfer of Class I liquids into storage tanks from the top of the tank, and only when the liquid being transferred has a minimum conductivity that prevents the accumulation of static electricity, in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants;
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

A2. This also applies to the loading and unloading of tank vehicles, as required in Sentence 4.11.3.3.(1).

Intent

I1. To remove from the application of Sentence 4.1.8.2.(2) cases where the liquid being transferred has characteristics that limit the probability that static electricity will build up to levels that could lead to the ignition of vapour.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Installation of fill pipes for the transfer of Class I liquids into storage tanks from the top of the tank, in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Clause 4.1.8.2.(3)(a), which applies when the conditions in the vapour space are such that they reduce the probability of the risk of ignition of flammable vapours,
- Clause 4.1.8.2.(3)(b), which applies when the liquid being transferred has a minimum conductivity that reduces the probability of the accumulation of static electricity.

A2. This also applies to the loading and unloading of tank vehicles, as required in Sentence 4.11.3.3.(1).

Intent

I. To limit the probability that vibrations due to inadequate support will lead to the breakage or failure of the fill pipe, which could lead to the 150 mm maximum clearance of the fill pipe from the bottom of the tank being exceeded, which could lead to free-fall or splashing of the liquid as it enters the tank, which could lead to the buildup of static charges, which could lead to the ignition of vapour, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference: 4.1.8.3.(1)-01
Attribution: functional statement/objective F43-OS1.1

CodeText

1) Class I liquids shall be drawn from or transferred into containers or storage tanks within a building
   a) through a piping or transfer system conforming to Section 4.5.,
   b) by means of a pump designed in conformance with good engineering practice on top of the container or storage tank, or
   c) by gravity through a self-closing valve designed in conformance with good engineering practice.
   (See Appendix A.)

Application

A1. Transfer of Class I liquids into or from containers or storage tanks inside buildings by means of a manually operated pump mounted on the top of the container or tank.

Exception:
   except as stated in
   - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
   - Sentence 4.1.1.1.(3), which applies to
     - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
     - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
     - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
     - the storage of aerosol products covered under Subsection 3.2.5.,
     - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
     - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
     - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
     - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

11. To limit the probability that vapour will be released or liquid will escape, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Transfer of Class I liquids into or from containers or storage tanks inside buildings by gravity through a self-closing valve.

Exception: except as stated in

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”.
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

11. To limit the probability that vapour will be released or liquid will escape, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Transfer of Class I liquids into or from containers or storage tanks inside buildings through a closed piping or transfer system.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

A1. Transfer of Class I liquids into or from containers or storage tanks inside buildings through a closed piping or transfer system.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

11. To direct Alberta Fire Code 2006 users to Section 4.5.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Transfer of flammable liquids and combustible liquids from containers or storage tanks, by means of pressure applied to the container or tank, in buildings, structures and open areas.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.5.10. and, more specifically, in Article 4.5.9.6. and Sentence 4.5.9.7.(2), which apply to the transfer of flammable liquids and combustible liquids through piping systems.

Intent

I1. To limit the probability that overpressurization will rupture the container or tank, or lead to its failure, which could lead to the escape of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons.

I2. To limit the probability that using a gas that supports a combustion reaction, or that reacts with the liquid, will lead to a fire or explosion, which could lead to harm to persons.
Application and intent of Division B provisions

Application

A1. Removable suction tubes with leak-tight couplings to facilitate non-spill transfer of used lubricating oil from storage tanks in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that oil could leak from the couplings, which could lead to the spread of used lubricating oil, which could lead to harm to the public.

I2. To limit the probability that a nonremovable suction tube could become plugged, which could lead to difficulties in removing the plug, which could lead to damage to the tank during unplugging operations, which could lead to damage to the tank, which could lead to leakage from the tank, which could lead to harm to the public.
A1. Use of movable tanks having a capacity greater than 230 L for the dispensing of flammable liquids or combustible liquids into the fuel tanks of vehicles or other motorized equipment in buildings, structures and open areas.

Exception:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

CodeText

2) Only enclosed pumping equipment designed in conformance with good engineering practice shall be used to transfer Class I liquids to or from the fuel tanks of vehicles inside buildings. (See A-4.1.8.3.(1) in Appendix A.)

Application

A1. Enclosed pumping equipment used for the transfer of Class I liquids to or from the fuel tanks of vehicles inside buildings.

Exception:
except as stated in
- Sentence 4.1.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”;
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that vapour will be released or liquid will escape, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Attribution - functional statement/objective Not applicable

CodeText

1) Except as provided in Sentence (2), this Section shall apply to the storage, handling and use of flammable liquids or combustible liquids that are in

a) containers conforming to Clauses 4.2.3.1.(1)(a) to (d) having an individual capacity of not more than 230 L,

b) portable tanks conforming to Clause 4.2.3.1.(1)(e) having an individual capacity of not more than 2 500 L, and

c) intermodal bulk containers conforming to Clause 4.2.3.1.(1)(e) having an individual capacity of not more than 3 000 L.

Exception:

- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,

- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids and unstable liquids, in buildings, structures and open areas, where the liquids are in

  - containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) having an individual capacity of not more than 230 L,

  - portable tanks conforming to Clause 4.2.3.1.(1)(e) having an individual capacity of not more than 2 500 L, and

  - intermodal bulk containers conforming to Clause 4.2.3.1.(1)(e) having an individual capacity of not more than 3 000 L.

Application

A1. Indoor and outdoor storage, handling and use of flammable liquids, combustible liquids and unstable liquids, in buildings, structures and open areas, where the liquids are in

- containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) having an individual capacity of not more than 230 L,

- portable tanks conforming to Clause 4.2.3.1.(1)(e) having an individual capacity of not more than 2 500 L, and

- intermodal bulk containers conforming to Clause 4.2.3.1.(1)(e) having an individual capacity of not more than 3 000 L.

Exception:

- except as stated in

  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,

  - Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids and unstable liquids, in buildings, structures and open areas, where the liquids are in

    - the storage or handling of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,

    - the storage of aerosol products covered under Subsection 3.2.5.,

    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,

    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,

    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and

    - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,

- Sentence 4.2.1.1.(2), which applies to

  - bulk plants, refineries and distilleries,

  - liquids in motor or engine fuel tanks,

  - distilled beverage alcohol in closed containers when stored in conformance with Part 3,

  - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and

  - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids (with the remainder of the solution being non-flammable), when in closed containers having a capacity of not more than 5 L.

Intent

II. To state the application of Section 4.2.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.2.1.1.(2)-01
Attribution - functional statement/objective Not applicable

CodeText

Application

Not applicable

Attribution - functional statement/objective

4.2.1.1.(2)-01

CodeReference

(including record number)

2) Except as otherwise stated in this Code, this Section shall not apply to
a) bulk plants covered in Section 4.7., refineries covered in Section 4.9. and distilleries covered in Section 4.10.,
b) liquids in the fuel tank of motors or engines,
c) distilled beverage alcohol in closed containers when stored in conformance with Part 3,
d) food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, or
e) products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids with the remainder of the solution being non-flammable, when in closed containers having a capacity of not more than 5 L.

Application

A1. Indoor and outdoor storage, handling and use of flammable liquids, combustible liquids and unstable liquids, in buildings, structures and open areas, where the liquids are
- in bulk plants, refineries and distilleries,
- in motor or engine fuel tanks,
- distilled beverage alcohols in closed containers when stored in conformance with Part 3,
- food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, or
- products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids with the remainder of the solution being non-flammable, when in closed containers having a capacity of not more than 5 L.

Intent

I1. To exclude from the application of Section 4.2. certain situations that
- are covered more specifically in other parts of the Alberta Fire Code 2006 [Clauses (a) and (c)],
- are outside the scope of the Alberta Fire Code 2006 and are covered by other regulations [Clause (b)], or
- do not present a serious fire hazard [Clauses (d) and (e)].
A1. Installation of indoor and outdoor aboveground portable tanks conforming to Clause 4.2.3.1.(1) (e) that contain flammable liquids, combustible liquids or unstable liquids and that have a capacity greater than 2 500 L.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.2.1.1.(2), which applies to
  - bulk plants, refineries and distilleries,
  - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
  - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
  - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids (with the remainder of the solution being non-flammable), when in closed containers having a capacity of not more than 5 L.

I1. To expand the application of Section 4.3.
Application and intent of Division B provisions

A1. Indoor and outdoor storage, handling and use of unstable liquids, where the liquids are
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or
- in portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:
- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.2.1.1.(2), which applies to
  - bulk plants, refineries and distilleries,
  - liquids in motor or engine fuel tanks,
  - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
  - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
  - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent
I1. To clarify how to treat, in Section 4.2., unstable liquids that are also flammable liquids or combustible liquids.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

Application
A1. Indoor and outdoor storage, handling and use of flammable liquids or combustible liquids, where the liquids are in portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.2.1.1.(2), which applies to
  - bulk plants, refineries and distilleries,
  - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
  - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
  - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids (with the remainder of the solution being non-flammable), when in closed containers having a capacity of not more than 5 L.

Intent
11. To clarify the term container in Part 4 as meaning not only small vessels for flammable liquids and combustible liquids (conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d)) having a capacity not greater than 230 L, but also portable tanks (conforming to Clause 4.2.3.1.(1)(e)) having an individual capacity of not more than 2 500 L.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.2.2.1.(1)-01
Attribution - functional statement/objective F03-O61.2

CodeText

1) Flammable liquids or combustible liquids shall not be stored in or adjacent to exits, elevators or principal routes that provide access to exits.

Application

A1. Indoor storage of flammable liquids, combustible liquids or unstable liquids, in or adjacent to elevators, where the liquids are
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or
- in portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:
- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
    - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Sentence 4.2.1.1.(2), which applies to
    - bulk plants, refineries and distilleries,
    - liquids in motor or engine fuel tanks,
    - distilled beverage alcohol in closed containers when stored in conformance with Part 3
    - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
    - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids (with the remainder of the solution being non-flammable), when in closed containers having a capacity of not more than 5 L.

Intent

I1. To limit the probability that the involvement of flammable liquids, combustible liquids or unstable liquids in a fire will lead to smoke, heat and flame travel to other floor areas in the building by way of the elevator hoistways, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

Application

A1. Indoor storage of flammable liquids, combustible liquids or unstable liquids, in or adjacent to exits or principal routes that provide access to exits.

- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or
- in portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2,500 L.

Exception:

- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.2.1.1.(2), which applies to bulk plants, refineries and distilleries,
- liquids in motor or engine fuel tanks,
- distilled beverage alcohol in closed containers when stored in conformance with Part 3,
- food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
- products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

I1. To limit the probability that the storage of liquids in or adjacent to egress routes will lead to obstruction or impairment of the means of egress from floor areas or buildings, which could lead to a delay in evacuation, which could lead to harm to persons.

I2. To limit the probability of obstruction or impairment to firefighting operations within buildings, which could lead to a delay in rescue operations, which could lead to harm to persons.
A1. Method of indoor or outdoor storage – to provide stability – of flammable liquids, combustible liquids or unstable liquids, where the liquids are:

- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or
- in portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:

- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.2.1.1.(2), which applies to bulk plants, refineries and distilleries,
- liquids in motor or engine fuel tanks,
- distilled beverage alcohol in closed containers when stored in conformance with Part 3, food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
- products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

I1. To limit the probability of the premature collapse of stored products in a fire situation, which could lead to the spread of fire across required aisles and clear spaces, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Method of indoor or outdoor storage – to provide stability – of flammable liquids, combustible liquids or unstable liquids, where the liquids are
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or
- in portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- the storage of liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.2.1.1.(2), which applies to
- bulk plants, refineries and distilleries,
- products in motor or engine fuel tanks,
- distilled beverage alcohol in closed containers when stored in conformance with Part 3, and
- food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
- products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

I1. To limit the probability of the premature collapse of stored products, which could lead to the release of liquid and vapours, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.2.2.2.(1)-03
Attribution - functional statement/objective F20-OS1.1,OS1.2 and F04-OS1.2,OS1.5

CodeText

1) In addition to the provisions of this Section, the method of storage of flammable liquids and combustible liquids shall be determined to be stable and ensure the physical and chemical stability of the stored products.

Application

A1. Method of indoor or outdoor storage – to provide stability – of flammable liquids, combustible liquids or unstable liquids, where the liquids are:
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or
- in portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.2.1.1.(2), which applies to bulk plants, refineries and distilleries,
- liquids in motor or engine fuel tanks,
- distilled beverage alcohol in closed containers when stored in conformance with Part 3,
- food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
- products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

I1. To limit the probability of the premature collapse of stored products, which could lead to the release of liquid and vapours, which could lead to a fire hazard, which could lead to harm to persons.

I2. To limit the probability of the premature collapse of stored products in a fire situation, which could lead to the spread of fire across required aisles and clear spaces, which could lead to harm to persons, including emergency responders.

I3. To limit the probability of the premature collapse of stored products during firefighting operations, which could lead to the obstruction of access aisles, which could negatively affect the safe egress of emergency responders, which could lead to harm to persons, including emergency responders.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Separation – from other dangerous goods – of indoor or outdoor storage of flammable liquids, combustible liquids or unstable liquids, where the liquids are
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or
- in portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:
- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
    - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Sentence 4.2.1.1.(2), which applies to
    - bulk plants, refineries and distilleries,
    - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
    - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
    - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids (with the remainder of the solution being non-flammable), when in closed containers having a capacity of not more than 5 L.

Application

Not applicable

Intent

11. To direct Alberta Fire Code 2006 users to Sections 3.2. and 3.3. and clarify that the separation requirements in Sections 3.2. and 3.3. also apply to flammable liquids and combustible liquids in containers that are otherwise covered in Section 4.2.

CodeReference (including record number) 4.2.2.3.(1)-01
Attribution - functional statement/objective Not applicable
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Separation – from other dangerous goods – of indoor or outdoor storage of Class IIIA liquids, where the liquids are:
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or
- in portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2,500 L.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.2.1.1.(2), which applies to bulk plants, refineries and distilleries,
- Sentence 4.2.1.1.(3), which applies to liquids in motor or engine fuel tanks,
- distilled beverage alcohol in closed containers when stored in conformance with Part 3,
- food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
- products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids (with the remainder of the solution being non-flammable), when in closed containers having a capacity of not more than 5 L.

Intent
11. To clarify that the separation requirements of Article 3.2.7.6. also apply to Class IIIA liquids in containers.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application of Division B provisions

A1. Construction of containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L, for flammable liquids, combustible liquids or unstable liquids, where the liquids are used inside or outside of buildings.

Exception:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of aerosol products covered under Subsection 3.2.5.,
- food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
- products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Section 4.2.3.3., which applies to plastic, glass and other containers, and
- Sentences 4.1.5.8.(2), 4.2.6.4.(1) and 5.5.5.2.(2), which apply where safety containers conforming to Clause 4.2.3.1.(1)(d) are required.

A2. This also applies to containers for flammable liquids, combustible liquids or unstable liquids at fuel-dispensing stations as stated in Sentence 4.6.2.2.(1) and Clause 4.6.8.5.(1)(c).

Intent

I1. To limit the probability of the unwanted release of liquid or vapour, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

CodeReference (including record number) 4.2.3.1.(1)-02
Attribution - functional statement/objective F20,F43,F80,F81,F01-OS1.1

CodeText

1) Except as permitted in Article 4.2.3.3., containers and portable tanks for flammable liquids or combustible liquids shall be built in conformance with the following:
   a) the “Transportation of Dangerous Goods Regulations,”
   b) CSA B376-M, “Portable Containers for Gasoline and Other Petroleum Fuels,”
   c) CSA B306-M, “Portables Fuel Tanks for Marine Use,”
   d) ULC/ORD-C30, “Safety Containers,” or
   e) Section 6 of CSA B620, “Highway Tanks and Portable Tanks for the Transportation of Dangerous Goods.”

Application

A1. Construction of containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L, where the liquids are used inside or outside of buildings.

Exception:
   - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
   - Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
   - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
   - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
   - the storage of aerosol products covered under Subsection 3.2.5.,
   - the storage of aerosol products covered under Subsection 3.2.5.,
   - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
   - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
   - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
   - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
   - Article 4.2.3.3., which applies to plastic, glass and other containers, and
   - bulk plants, refineries and distilleries,
   - liquid in motor or engine fuel tanks,
   - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
   - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids with the remainder of the solution being non-flammable, when in closed containers having a capacity of not more than 5 L.

A2. This applies to containers for flammable liquids, combustible liquids or unstable liquids at fuel-dispensing stations as stated in Sentence 4.6.2.2.(1) and Clause 4.6.8.5.(1)(c).

Intent

I1. To limit the probability of the unwanted release of liquid or vapour, which could lead to a fire or explosion hazard, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.2.3.1.(1)-03
Attribution - functional statement/objective F01,F43,F04-O51.1

CodeText

1) Except as permitted in Article 4.2.3.3., containers and portable tanks for flammable liquids or combustible liquids shall be built in conformance with the following:
   a) the "Transportation of Dangerous Goods Regulations;"
   b) CSA B376-M, "Portable Containers for Gasoline and Other Petroleum Fuels;"
   c) CSA B300-M, "Portable Fuel Tanks for Marine Use;"
   d) UL/ORD-C30, "Safety Containers;" or
   e) Section 6 of CSA B620, "Highway Tanks and Portable Tanks for the Transportation of Dangerous Goods;"

Application

A1. Construction of containers conforming to Clause 4.2.3.1.(d) that have a capacity of not more than 230 L, for flammable liquids, combustible liquids or unstable liquids, where the liquids are used inside or outside of buildings, and as specifically required in
   - Sentence 4.1.5.8.(2) for the storage of not more than 5 L of Class I liquids in basements,
   - Sentence 4.2.6.4.(1) for storage in individual containers with a capacity of more than 5 L but not more than 25 L, in buildings covered in Subsection 4.2.6., and
   - Sentence 5.5.5.2.(2) for the storage of Class I liquids in individual containers with a capacity of more than 5 L but not more than 25 L, in laboratories covered in Section 5.7.

Exception:
   - Article 4.1.1.1.(2), which applies to unique hazards in process plants,
   - Sentence 4.1.1.1.(3), which applies to
     - the transportation of flammable liquids or combustible liquids and appliances and their ancillary equipment within the scope of CAN/CSA-B139,
   - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
   - the storage of aerosol products covered under Subsection 3.2.5.,
   - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
   - the production, storage or handling of volatile natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
   - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
   - the storage or handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
   - Sentence 4.2.1.1.(2), which applies to
     - bulk plants, refineries and distilleries,
     - liquids in motor or engine fuel tanks,
     - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
     - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
     - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids (with the remainder of the solution being non-flammable), when in closed containers having a capacity of not more than 5 L,
   - Article 4.2.3.3., which applies to plastic, glass and other containers.

A2. This also applies to containers for flammable liquids, combustible liquids or unstable liquids at fuel-dispensing stations as stated in Sentence 4.6.2.2.(1) and Clause 4.6.8.5.(1)(c).

Intent

I1. To limit the probability of the release and ignition of vapours and the escape of liquids under normal conditions, and the rupture and explosion of the container under fire conditions, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.2.3.2.(1)-01
Attribution - functional statement/objective F81-OS1.1 and F12-OS1.1.OS1.2

CodeText
1) Except as provided in Sentence (2) and Article 4.2.3.1., containers for flammable liquids or combustible liquids shall be distinctly marked or labelled in easily legible type that is in contrast to any other printed matter on the label with a warning to indicate that:
   a) the material in the container is flammable,
   b) it should be kept away from heat, sparks and open flames, and
   c) it should be kept closed when not in use.

   Exception:
   - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
   - Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
   - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
   - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
   - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
   - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
   - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
   - Sentence 4.2.1.1.(2), which applies to bulk plants, refineries and distilleries,
   - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
   - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
   - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

2) Except as stated in - Sentence 4.2.3.1.(1), which applies to containers built to required standards including identification marking or labelling, and - Sentence 4.2.3.2.(2), which applies to containers labelled in conformance with overriding regulations.

Intent
I1. To limit the probability of unsafe storage practices, accidental mischief or mishandling of products, or inappropriate actions by personnel during an emergency situation, which could lead to a fire or explosion hazard, which could lead to harm to persons.

I2. To limit the probability of delays or ineffectiveness in conducting firefighting or spill control operations, which could lead to a fire or explosion hazard or the spread of fire beyond the point of fire origin, which could lead to harm to persons, including emergency responders.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

CodeReference (including record number)  4.2.3.2.(2)-01
Attribution - functional statement/objective  F81-OS1.1 and F12-OS1.1,OS1.2

CodeText

2) Markings referred to in Sentence (1) are not required when the container is labelled in conformance with
a) the “Transportation of Dangerous Goods Act” and its Regulations,
b) the “Hazardous Products Act” and its Regulations, or
c) the “Pest Control Products Act” and its Regulations.

Application

A1. Identification marking or labelling – conforming to one of the regulations prescribed in Sentence 4.2.3.2.(2) – of containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2500 L, for flammable liquids, combustible liquids or unstable liquids, where the liquids are used inside or outside of buildings.

Exception:

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
- the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
- Sentence 4.2.1.1.(2), which applies to
- bulk plants, refineries and distilleries,
- liquids in motor or engine fuel tanks,
- distilled beverage alcohol in closed containers when stored in conformance with Part 3,
- food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
- products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

I1. To limit the probability of unsafe storage practices, accidental mishandling, or mishandling of products, or inappropriate actions by personnel during an emergency situation, which could lead to a fire or explosion hazard, which could lead to harm to persons.

I2. To limit the probability of delays or ineffectiveness in conducting firefighting or spill control operations, which could lead to a fire or explosion hazard or the spread of fire beyond the point of fire origin, which could lead to harm to persons, including emergency responders.

I3. To waive the obligation to conform to Sentence 4.2.3.2.(1) if identification is provided in conformance with one of the overriding regulations prescribed in Sentence 4.2.3.2.(2).
A1. Storage, handling and use of flammable liquids, combustible liquids and unstable liquids, inside or outside of buildings, structures or open areas.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

CodeText
1) The storage, handling and use of flammable liquids or combustible liquids in a container other than one of those listed in Article 4.2.3.1. shall be permitted only if
   a) the required purity of the liquid would be affected by containers of the types listed in Article 4.2.3.1. or if the liquid would cause the excessive corrosion of those types of containers,
   b) the container not conforming to Article 4.2.3.1. has a capacity of not more than 1 L if used for Class I liquids and not more than 5 L if used for Class II or IIIA liquids, or
   c) the container not conforming to Article 4.2.3.1. is a sample container used for quality control purposes or for testing by regulatory officials.

Application
H1. To permit the use of containers that do not conform to Article 4.2.3.1. based on the limited size of the containers or the reactivity of the liquid with the containers.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Storage and handling of flammable liquids, combustible liquids or unstable liquids in buildings classified as assembly or residential occupancies, where the liquids are
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or
- in portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:
- Subsection 4.2.6., which applies to non-residential schools, universities or colleges,
- Article 4.1.5.8., which applies to the storage of Class I liquids in basements,
- Sentence 4.1.1.1.(3), which applies to -appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- Sentence 4.2.1.1.(2), which applies to - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
- food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
- products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Application

A1. Storage and handling of flammable liquids, combustible liquids or unstable liquids in buildings classified as assembly or residential occupancies, except that it shall not apply to nonresidential schools, universities or colleges covered in Subsection 4.2.6.

Exception: except as stated in
- Subsection 4.2.6., which applies to non-residential schools, universities or colleges,
- Sentence 4.1.5.8., which applies to the storage of Class I liquids in basements,
- Sentence 4.1.1.1.(3), which applies to -appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- Sentence 4.2.1.1.(2), which applies to - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
- food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
- products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

I1. To state the application of Subsection 4.2.4.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

1) Except as provided in Sentence (4) and in Articles 4.2.4.5. and 4.2.4.6., the maximum quantity of flammable liquid or combustible liquid stored in a building shall conform to Sentences (2) and (3).

A1. Maximum quantity of flammable liquids, combustible liquids or unstable liquids stored in buildings classified as assembly occupancies or residential occupancies, where the liquids are
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or
- in portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:
- except as stated in
  - Sentence 4.2.4.2.(4), which applies to storage in cabinets and storage rooms,
  - Article 4.2.4.5., which applies to storage in dwelling units,
  - Article 4.2.4.6., which applies to storage in garages and sheds attached to dwelling units,
  - Subsection 4.2.6., which applies to non-residential schools, universities or colleges,
  - Article 4.1.5.8., which applies to the storage of Class I liquids in basements,
  - Sentence 4.1.1.1.(3), which applies to
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - Sentence 4.2.1.1.(2), which applies to
    - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
    - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
    - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

11. To direct Alberta Fire Code 2006 users to Sentences 4.2.4.2.(2) and 4.2.4.2.(3).
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Maximum quantity of single class flammable liquids, combustible liquids or unstable liquids stored in buildings classified as assembly occupancies or residential occupancies, where the liquids are
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or
- in portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:
except as stated in
- Sentence 4.2.4.2.(4), which applies to storage in cabinets and storage rooms,
- Article 4.2.4.5., which applies to storage in dwelling units,
- Article 4.2.4.6., which applies to storage in garages and sheds attached to dwelling units,
- Subsection 4.2.6., which applies to non-residential schools, universities or colleges,
- Article 4.1.5.B., which applies to the storage of Class I liquids in basements,
- Sentence 4.1.1.1.(3), which applies to-
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- Sentence 4.2.1.1.(2), which applies to-
  - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
  - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
  - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

I1. To limit the probability that a large quantity of liquid will lead to an excessive fire load, which could lead to the spread of a fire involving flammable liquids, combustible liquids or unstable liquids beyond the point of fire origin, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Maximum quantity of single class flammable liquids, combustible liquids or unstable liquids stored in buildings classified as assembly occupancies or residential occupancies, where the liquids are

- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or
- in portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:

except as stated in

- Sentence 4.2.4.2.(4), which applies to storage in cabinets and storage rooms,
- Article 4.2.4.5., which applies to storage in dwelling units,
- Article 4.2.4.6., which applies to storage in garages and sheds attached to dwelling units,
- Subsection 4.2.6., which applies to non-residential schools, universities or colleges,
- Article 4.1.5., which applies to the storage of Class I liquids in basements,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- Sentence 4.2.1.1.(2), which applies to
- distilled beverage alcohol in closed containers when stored in conformance with Part 3,
- food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
- products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

I1. To limit the probability that a large quantity of liquid will lead to an excessive fire load, which could lead to the spread of a fire involving flammable liquids, combustible liquids or unstable liquids beyond the point of fire origin, which could lead to harm to persons.
A1. Maximum quantity for more than one class of flammable liquid, combustible liquid or unstable liquid stored in buildings classified as assembly occupancies or residential occupancies, where the liquids are
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or
- in portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:
- except as stated in
  - Sentence 4.2.4.2.(4), which applies to storage in cabinets and storage rooms,
  - Article 4.2.4.6., which applies to storage in garages and sheds attached to dwelling units,
  - Subsection 4.2.6., which applies to non-residential schools, universities or colleges,
  - Article 4.1.5.8., which applies to the storage of Class I liquids in basements,
  - Article 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139, the storage of aerosol products covered under Subsection 3.2.5., liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - Sentence 4.2.1.1.(2), which applies to distilled beverage alcohol in closed containers when stored in conformance with Part 3,
  - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
  - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Application
3) When 2 or more classes of liquid are stored in the same building, the total quantity permitted for each class of liquid shall be calculated as follows:

\[ q_{I}/30 + q_{II}/150 + q_{IIIA}/600 \leq 1 \]

where
- \( q_{I} \) is the actual quantity of Class I liquids present,
- \( q_{II} \) is the actual quantity of Class II liquids present,
- \( q_{IIIA} \) is the actual quantity of Class II A liquids present.

Intent
11. To limit the probability that a large quantity of liquid will lead to an excessive fire load, which could lead to the spread of a fire involving flammable liquids, combustible liquids or unstable liquids beyond the point of fire origin, which could lead to damage to the building.

12. To clarify what quantity limits apply to a storage situation for which there would otherwise be no applicable requirement in Sentence 4.2.4.2.(2).
Application and intent of Division B provisions

Alberta Fire Code 2006

4.2.4.2.(3)-02

Application and intent of Division B provisions

A1. Maximum quantity for more than one class of flammable liquid, combustible liquid or unstable liquid stored in buildings classified as assembly occupancies or residential occupancies, where the liquids are

- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or
- in portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:

- except as stated in Sentence 4.2.4.2.(4), which applies to storage in cabinets and storage rooms,
- Article 4.2.4.6., which applies to storage in garages and sheds attached to dwelling units,
- Subsection 4.2.6., which applies to non-residential schools, universities or colleges,
- Sentence 4.1.1.1.(3), which applies to - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- Sentence 4.2.1.1.(2), which applies to - distilled beverage alcohol in closed containers when stored in conformance with Part 3
- food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
- products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

I1. To limit the probability that a large quantity of liquid will lead to an excessive fire load, which could lead to the spread of a fire involving flammable liquids, combustible liquids or unstable liquids beyond the point of fire origin, which could lead to harm to persons.

I2. To clarify what quantity limits apply to a storage situation for which there would otherwise be no applicable requirement in Sentence 4.2.4.2.(2).
Application and intent of Division B provisions

Alberta Fire Code 2006

4.2.4.2.4) Quantities of flammable liquids or combustible liquids exceeding those permitted in Sentence (1) are permitted, provided they are kept

a) in storage cabinets conforming to Subsection 4.2.10.0, except that the total quantity of flammable liquids and combustible liquids stored in such cabinets shall not exceed the quantity permitted for one cabinet, or

b) in a storage room conforming to Subsection 4.2.9. and having no openings that communicate directly with the public portions of the building.

Application

A1. Quantities of flammable liquids, combustible liquids or unstable liquids in excess of those permitted in Sentences 4.2.4.2.(2) and 4.2.4.2.(3), where the liquids are

- stored in
  - storage cabinets conforming to Subsection 4.2.10.0, or
  - storage rooms conforming to Subsection 4.2.9. that have no openings that communicate directly with public portions of buildings,

- in buildings classified as assembly occupancies or residential occupancies, and

- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:

- except as stated in Sentence 4.2.4.2.(4), which applies to storage in cabinets and storage rooms,

- Article 4.2.4.5., which applies to storage in dwelling units,

- Article 4.2.4.6., which applies to storage in garages and sheds attached to dwelling units,

- Subsection 4.2.6., which applies to non-residential schools, universities or colleges,

- Article 4.1.5.8., which applies to the storage of Class I liquids in basements,

- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,

- the storage of aerosol products covered under Subsection 3.2.5.,

- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,

- distilled beverage alcohol in closed containers when stored in conformance with Part 3,

- food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and

- products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

I1. To override the quantity limits calculated in Sentences 4.2.4.2.(2) and 4.2.4.2.(3) and permit more liquids in a building if the liquids are stored in a manner that will limit the probability of their involvement in a fire occurring in the building.

This is to limit the probability of the spread of fire, which could lead to damage to the building.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.2.4.2.(4)-02
Attribution - functional statement/objective F02.F03-OS1.2

CodeText

4) Quantities of flammable liquids or combustible liquids exceeding those permitted in Sentence (1) are permitted, provided they are kept
   a) in storage cabinets conforming to Subsection 4.2.10., except that the total quantity of flammable
      liquids and combustible liquids stored in such cabinets shall not exceed the quantity permitted
      for one cabinet, or
   b) in a storage room conforming to Subsection 4.2.9. and having no openings that communicate
directly with the public portions of the building.

Application

A1. Quantities of flammable liquids, combustible liquids or unstable liquids in excess of those permitted in Sentences 4.2.4.2.(2) and 4.2.4.2.(3), where the liquids are
   - stored in
     - storage cabinets conforming to Subsection 4.2.10., or
     - storage rooms conforming to Subsection 4.2.9. that have no openings that communicate
directly with public portions of buildings,
   - in buildings classified as assembly occupancies or residential occupancies, and
   - in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not
     more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual
     capacity of not more than 2 500 L.

Exception:
   except as stated in
   - Sentence 4.2.4.2.(4), which applies to storage in cabinets and storage rooms,
   - Article 4.2.4.5., which applies to storage in dwelling units,
   - Article 4.2.4.6., which applies to storage in garages and sheds attached to dwelling units,
   - Subsection 4.2.6., which applies to non-residential schools, universities or colleges,
   - Article 4.1.5.8., which applies to the storage of Class I liquids in basements,
   - Sentence 4.1.1.1.(3), which applies to
     - appliances and their ancillary equipment within the scope of the gas regulations made pursuant
to the Safety Codes Act,
   - Sentence 4.2.1.1.(2), which applies to
     - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
     - food and pharmaceutical products when in closed containers having a capacity of not more
       than 5 L, and
     - products containing not more than 50% by volume of water-miscible flammable liquids or
       combustible liquids [with the remainder of the solution being non-flammable], when in closed
       containers having a capacity of not more than 5 L.

Intent

I1. To override the quantity limits calculated in Sentences 4.2.4.2.(2) and 4.2.4.2.(3) and permit
    more liquids in a building if the liquids are stored in a manner that will limit the probability of their
    involvement in a fire occurring in the building.

This is to limit the probability of the spread of fire, which could lead to harm to persons.
A1. Maximum quantities of flammable liquids, combustible liquids or unstable liquids in excess of those permitted in Sentences 4.2.4.2.(2) and 4.2.4.2.(3), where the liquids are stored in storage cabinets conforming to Subsection 4.2.10., in buildings classified as assembly occupancies or residential occupancies, and in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:
except as stated in Sentence 4.2.4.2.(4), which applies to storage in cabinets and storage rooms, Article 4.2.4.5., which applies to storage in dwelling units, Article 4.2.4.6., which applies to storage in garages and sheds attached to dwelling units, Subsection 4.2.6., which applies to non-residential schools, universities or colleges, Article 4.1.5.8., which applies to the storage of Class I liquids in basements, Sentence 4.1.1.1.(2), which applies to distilled beverage alcohol in closed containers when stored in conformance with Part 3, and products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

I1. To limit the probability that a large quantity of liquid will lead to an excessive fire load, which could lead to the spread of a fire involving flammable liquids, combustible liquids or unstable liquids beyond the point of fire origin, which could lead to damage to the building.

I2. To override the permission in Sentence 4.2.10.3.(1) to have 3 cabinets per fire compartment.
Application and intent of Division B provisions

A1. Maximum quantities of flammable liquids, combustible liquids or unstable liquids in excess of those permitted in Sentence 4.2.4.2.(2) are permitted, provided they are kept:

- stored in storage cabinets conforming to Subsection 4.2.10., except that the total quantity of flammable liquids and combustible liquids stored in such cabinets shall not exceed the quantity permitted for one cabinet, or
- in storage rooms conforming to Subsection 4.2.9. and having no openings that communicate directly with the public portions of the building.

Application

A1. Maximum quantities of flammable liquids, combustible liquids or unstable liquids in excess of those permitted in Sentences 4.2.4.2.(2) and 4.2.4.2.(3), where the liquids are:

- stored in storage cabinets conforming to Subsection 4.2.10.,
- in buildings classified as assembly occupancies or residential occupancies, and
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:

- Sentence 4.2.4.2.(4), which applies to storage in cabinets and storage rooms,
- Article 4.2.4.5., which applies to storage in dwelling units,
- Article 4.2.4.6., which applies to storage in garages and sheds attached to dwelling units,
- Subsection 4.2.6., which applies to non-residential schools, universities or colleges,
- Article 4.1.5.8., which applies to the storage of Class I liquids in basements,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- Sentence 4.2.1.1.(2), which applies to:
  - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
  - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
  - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

I1. To limit the probability that a large quantity of liquid will lead to an excessive fire load, which could lead to the spread of a fire involving flammable liquids, combustible liquids or unstable liquids beyond the point of fire origin, which could lead to harm to persons.

I2. To override the permission in Sentence 4.2.10.3.(1) to have 3 cabinets per fire compartment.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Openings in fire separations around storage rooms conforming to Subsection 4.2.9., for flammable liquids, combustible liquids or unstable liquids, where the liquids are - in quantities in excess of those permitted in Sentences 4.2.4.2.(2) and 4.2.4.2.(3), - in buildings classified as assembly occupancies or residential occupancies, and - in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:
except as stated in - Sentence 4.2.4.2.(4), which applies to storage in cabinets and storage rooms, - Article 4.2.4.5., which applies to storage in dwelling units, - Article 4.2.4.6., which applies to storage in garages and sheds attached to dwelling units, - Subsection 4.2.6., which applies to non-residential schools, universities or colleges, - Article 4.1.5.8., which applies to the storage of Class I liquids in basements, - Sentence 4.1.1.1.(3), which applies to - appliances and their ancillary equipment within the scope of CAN/CSA-B139, - the storage of aerosol products covered under Subsection 3.2.5., - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act, - Sentence 4.2.1.1.(2), which applies to - distilled beverage alcohol in closed containers when stored in conformance with Part 3, - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

I1. To limit the probability of the spread of smoke from a fire involving flammable liquids, combustible liquids or unstable liquids to occupied parts of the building, which could lead to harm to persons.

I2. To override the [implied] permission in Subsection 4.2.9. for fire separations to have openings [protected with closures in accordance with the Alberta Building Code 2006].
4) Quantities of flammable liquids or combustible liquids exceeding those permitted in Sentence (1) are permitted, provided they are kept
   a) in storage cabinets conforming to Subsection 4.2.10. except that the total quantity of flammable liquids and combustible liquids stored in such cabinets shall not exceed the quantity permitted for one cabinet, or
   b) in a storage room conforming to Subsection 4.2.9. and having no openings that communicate directly with the public portions of the building.

Exception:
   except as stated in
   - Sentence 4.2.4.2.(4), which applies to storage in cabinets and storage rooms,
   - Article 4.2.4.5., which applies to storage in dwelling units,
   - Article 4.2.4.6., which applies to storage in garages and sheds attached to dwelling units,
   - Subsection 4.2.6., which applies to non-residential schools, universities or colleges,
   - Article 4.1.5.8., which applies to the storage of Class I liquids in basements,
   - Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
   - the storage of aerosol products covered under Subsection 3.2.5.,
   - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
   - Sentence 4.2.1.1.(2), which applies to distilled beverage alcohol in closed containers when stored in conformance with Part 3,
   - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
   - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Location of storage cabinets conforming to Subsection 4.2.10. and storage rooms conforming to Subsection 4.2.9., for
flammable liquids, combustible liquids or unstable liquids, where the liquids are
- in quantities in excess of those permitted in Sentences 4.2.4.2.(2) and 4.2.4.2.(3),
- in buildings classified as assembly occupancies or residential occupancies, and
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:
- except as stated in
  - Sentence 4.2.4.2.(4), which applies to storage in cabinets and storage rooms,
  - Article 4.2.4.5., which applies to storage in dwelling units,
  - Article 4.2.4.6., which applies to storage in garages and sheds attached to dwelling units,
  - Subsection 4.2.6., which applies to non-residential schools, universities or colleges,
  - Article 4.1.5.8., which applies to the storage of Class I liquids in basements,
  - Sentence 4.1.1.1.(3), which applies to prohibited use of storage in cabinets and storage rooms,

F12-OP1.2 and F01-OP1.1

Attribution - functional statement/objective

1) The storage cabinets and storage rooms referred to in Sentence 4.2.4.2.(4) shall not be located above or below the first storey.

CodeText

Alberta Fire Code 2006

4.2.4.4.(1)-01

Attribution - functional statement/objective

P03-OP1.2

Application

A1. Storage — on exterior balconies — of flammable liquids, combustible liquids or unstable liquids, where the liquids are
- in buildings classified as assembly occupancies or residential occupancies, and
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2500 L.

Exception:
- except as stated in
  - Subsection 4.2.6., which applies to non-residential schools, universities or colleges, and
  - Sentence 4.2.1.1.(2), which applies to
    - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
    - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
    - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

I1. To limit the probability that flammable liquids, combustible liquids or unstable liquids will be involved in a fire, which could lead to the spread of fire along the building exterior and to other storeys through openings in the exterior walls [that are not designed to act as a fire separation against such a fire hazard], which could lead to damage to the building.
Application and intent of Division B provisions

Alberta Fire Code 2006

4.2.4.4.(1)-02

A1. Storage – on exterior balconies – of flammable liquids, combustible liquids or unstable liquids, where the liquids are
- in buildings classified as assembly occupancies or residential occupancies, and
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2500 L.

Exception:
- except as stated in
  - Subsection 4.2.6., which applies to non-residential schools, universities or colleges, and
  - Sentence 4.2.1.1.(2), which applies to
    - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
    - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
    - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

I1. To limit the probability that flammable liquids, combustible liquids or unstable liquids will be involved in a fire, which could lead to the spread of fire along the building exterior and to other storeys through openings in the exterior walls [that are not designed to act as a fire separation against such a fire hazard], which could lead to harm to persons.

1) Not more than 15 L of flammable liquids and combustible liquids, of which not more than 5 L shall be Class I liquids, are permitted to be stored in each dwelling unit. (See Sentence 4.1.1.1.(3) for oil-burning appliances.)

Application

A1. Storage quantity limits – in dwelling units – of flammable liquids or combustible liquids, where the liquids are
- in buildings classified as assembly occupancies or residential occupancies, including single-family dwellings, and
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:
except as stated in
- Subsection 4.2.6., which applies to non-residential schools, universities or colleges,
- Article 4.1.5.8., which applies to the storage of Class I liquids in basements,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- Sentence 4.2.1.1.(2), which applies to distilled beverage alcohol in closed containers when stored in conformance with Part 3, food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids (with the remainder of the solution being non-flammable), when in closed containers having a capacity of not more than 5 L.

Intent

I1. To limit the probability that a large quantity of liquid will lead to an excessive fire load, which could lead to the spread of a fire involving flammable liquids, combustible liquids or unstable liquids beyond the point of fire origin, which could lead to damage to the building.
I2. To remove dwelling units from the application of the quantity limits in Article 4.2.4.2.
I3. To remove basements in dwelling units from the application of the quantity limits in Sentence 4.1.5.8.(1).

1) Not more than 50 L of flammable liquids and combustible liquids, of which not more than 30 L shall be Class I liquids, are permitted to be stored in a garage or shed attached to a dwelling unit.

Application

A1. Maximum quantities of flammable liquids, combustible liquids or unstable liquids stored in garages or sheds attached to dwelling units, where the liquids are
- in buildings classified as assembly occupancies or residential occupancies, including single-family dwellings, and
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:
- except as stated in
  - Subsection 4.2.6., which applies to non-residential schools, universities or colleges,
  - Article 4.1.5.8., which applies to the storage of Class I liquids in basements,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - Sentence 4.2.1.1.(2), which applies to
    - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
    - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
    - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

I1. To limit the probability that a large quantity of liquid will lead to an excessive fire load, which could lead to the spread of a fire involving flammable liquids, combustible liquids or unstable liquids beyond the point of fire origin, which could lead to damage to the building.

I2. To remove attached garages or sheds from the application of the quantity limits in Article 4.2.4.2.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Maximum quantities of flammable liquids, combustible liquids or unstable liquids stored in garages or sheds attached to dwelling units, where the liquids are
- in buildings classified as assembly occupancies or residential occupancies, including single-family dwellings, and
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception: except as stated in
- Subsection 4.2.6., which applies to non-residential schools, universities or colleges,
- Article 4.1.5.8., which applies to the storage of Class I liquids in basements,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- Sentence 4.2.1.1.(2), which applies to
- distilled beverage alcohol in closed containers when stored in conformance with Part 3.
- food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
- products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

I1. To limit the probability that a large quantity of liquid will lead to an excessive fire load, which could lead to the spread of a fire involving flammable liquids, combustible liquids or unstable liquids beyond the point of fire origin, which could lead to harm to persons.

I2. To remove attached garages or sheds from the application of the quantity limits in Article 4.2.4.2.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Maximum quantity – in mercantile occupancies – of flammable liquids, combustible liquids or unstable liquids, where the liquids are
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or
- in portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:
- except as stated in
  - Sentence 4.2.5.1.(5), which applies to the storage of liquids in a storage area conforming to Subsection 4.2.7.,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the Transportation of Dangerous Goods Regulations*,
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - Sentence 4.2.1.1.(2), which applies to
    - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
    - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
    - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent
I1. To direct Alberta Fire Code 2006 users to Sentences 4.2.5.1.(2) to 4.2.5.1.(4).
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Maximum quantity – within single suites in mercantile occupancies that are not sprinklered – of flammable liquids, combustible liquids or unstable liquids, where the liquids are
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or
- in portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:
- Sentence 4.2.5.1.(5), which applies to the storage of liquids in a storage area conforming to Subsection 4.2.7.,
- Sentence 4.1.1.1.(3), which applies to
- the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- Sentence 4.2.1.1.(2), which applies to
- distilled beverage alcohol in closed containers when stored in conformance with Part 3,
- food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
- products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Application

A1. Maximum quantity – within single suites in mercantile occupancies that are not sprinklered – of flammable liquids, combustible liquids or unstable liquids, where the liquids are
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or
- in portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:
- Sentence 4.2.5.1.(5), which applies to the storage of liquids in a storage area conforming to Subsection 4.2.7.,
- Sentence 4.1.1.1.(3), which applies to
- the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- Sentence 4.2.1.1.(2), which applies to
- distilled beverage alcohol in closed containers when stored in conformance with Part 3,
- food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
- products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

1. To limit the probability of an excessive amount of liquid [fire loading], which could lead to the spread of a fire involving flammable liquids, combustible liquids or unstable liquids beyond the point of fire origin, which could lead to damage to the building.
Application and intent of Division B provisions

Alberta Fire Code 2006

2) In unsprinklered mercantile occupancies, the maximum quantity of flammable liquids and combustible liquids permitted to be stored in a single suite shall be the lesser of

- a) 8 L/m² of the total area of the suite, provided that not more than 2 L/m² are Class I liquids, of which not more than 0.3 L/m² shall be Class IA, Class IB, or any combination of these 2 classes, or
- b) 8 000 L, provided that not more than 2 000 L are Class I liquids, of which not more than 300 L shall be Class IA, Class IB, or any combination of these 2 classes.

Exception:

- except as stated in Sentence 4.2.5.1.(5), which applies to the storage of liquids in a storage area conforming to Subsection 4.2.7.,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- Sentence 4.2.1.1.(2), which applies to-
  - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
  - food and pharmaceutical products when in closed containers having a capacity of not more than 2 L, and
  - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids (with the remainder of the solution being non-flammable), when in closed containers having a capacity of not more than 5 L.

Intent

H1. To limit the probability of an excessive amount of liquid [fire loading], which could lead to the spread of a fire involving flammable liquids, combustible liquids or unstable liquids beyond the point of fire origin, which could lead to harm to persons.

3) In sprinklered mercantile occupancies, the maximum quantity of flammable liquids and combustible liquids permitted to be stored in a single suite shall be the lesser of a) 24 L/m² of the total area of the suite, provided that not more than 6 L/m² are Class I liquids, of which not more than 1 L/m² shall be Class IA, Class IB, or any combination of these 2 classes, or b) 24 000 L, provided that not more than 6 000 L are Class I liquids, of which not more than 1 000 L shall be Class IA, Class IB, or any combination of these 2 classes.

Exception:
except as stated in
- Sentence 4.2.5.1.(5), which applies to the storage of liquids in a storage area conforming to Subsection 4.2.7.,
- Sentence 4.1.1.1.(3), which applies to
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations", 
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- Sentence 4.2.1.1.(2), which applies to
- distilled beverage alcohol in closed containers when stored in conformance with Part 3,
- food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
- products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

II. To limit the probability of an excessive amount of liquid [fire loading], which could lead to the spread of a fire involving flammable liquids, combustible liquids or unstable liquids beyond the point of fire origin, which could lead to damage to the building.
Application and intent of Division B provisions

3) In sprinklered mercantile occupancies, the maximum quantity of flammable liquids and combustible liquids permitted to be stored in a single suite shall be the lesser of:
   a) 24 L/m² of the total area of the suite, provided that not more than 6 L/m² are Class I liquids, of which not more than 1 L/m² shall be Class IA, Class IB, or any combination of these 2 classes, or
   b) 24 000 L, provided that not more than 6 000 L are Class I liquids, of which not more than 1 000 L shall be Class IA, Class IB, or any combination of these 2 classes.

Exception:
   except as stated in
   - Sentence 4.2.5.1.(5), which applies to the storage of liquids in a storage area conforming to Subsection 4.2.7.,
   - Sentence 4.1.1.1.(3), which applies to
   - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”.
   - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
   - the storage of aerosol products covered under Subsection 3.2.5.,
   - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
   - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
   - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
   - Sentence 4.2.1.1.(2), which applies to
   - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
   - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
   - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Application

A1. Maximum quantity – within single suites in sprinklered mercantile occupancies – of flammable liquids, combustible liquids or unstable liquids, where the liquids are:
   - in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or
   - in portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Intent

I1. To limit the probability of an excessive amount of liquid [fire loading], which could lead to the spread of a fire involving flammable liquids, combustible liquids or unstable liquids beyond the point of fire origin, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Method of calculation in Sentences 4.2.5.1.(2) and 4.2.5.1.(3) for determining the maximum quantity of flammable liquids, combustible liquids or unstable liquids permitted within mercantile occupancies having a floor area of less than 250 m² shall be assumed to be 250 m² in area.

Application

4) For the purposes of calculating permissible quantities in Sentences (2) and (3), mercantile occupancies of less than 250 m² floor area shall be assumed to be 250 m² in area.

Application

A1. Method of calculation in Sentences 4.2.5.1.(2) and 4.2.5.1.(3) for determining the maximum quantity of flammable liquids, combustible liquids or unstable liquids permitted within mercantile occupancies having a floor area of less than 250 m², where the liquids are

- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or
- in portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2500 L.

Exception:

- except as stated in Sentence 4.2.5.1.(5), which applies to the storage of liquids in a storage area conforming to Subsection 4.2.7.,
- the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- Sentence 4.2.1.1.(2), which applies to

- distilled beverage alcohol in closed containers when stored in conformance with Part 3,
- food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
- products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

I1. To clarify the calculations in Sentences 4.2.5.1.(2) and 4.2.5.1.(3).
Application and intent of Division B provisions

A1. Storage areas conforming to Subsection 4.2.7., for flammable liquids, combustible liquids or unstable liquids, where the liquids are

- in quantities in excess of those permitted in Sentences 4.2.5.1.(2) to 4.2.5.1.(5),
- in mercantile occupancies, and
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) having an individual capacity of not more than 2 500 L.

Exception:

- except as stated in Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139, the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- Sentence 4.2.1.1.(2), which applies to distilled beverage alcohol in closed containers when stored in conformance with Part 3, food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids (with the remainder of the solution being non-flammable), when in closed containers having a capacity of not more than 5 L.

5) Quantities of flammable liquids and combustible liquids in excess of those permitted in Sentences (2) to (4), shall be kept in a storage area conforming to Subsection 4.2.7.

Application

A1. Storage areas conforming to Subsection 4.2.7., for flammable liquids, combustible liquids or unstable liquids, where the liquids are

- in quantities in excess of those permitted in Sentences 4.2.5.1.(2) to 4.2.5.1.(5),
- in mercantile occupancies, and
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) having an individual capacity of not more than 2 500 L.

Exception:

- except as stated in Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139, the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- Sentence 4.2.1.1.(2), which applies to distilled beverage alcohol in closed containers when stored in conformance with Part 3, food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids (with the remainder of the solution being non-flammable), when in closed containers having a capacity of not more than 5 L.

Intent

11. To override the quantity limits calculated in Sentences 4.2.5.1.(2) to 4.2.5.1.(4) and permit more liquids in a mercantile building if the liquids are stored in a manner that will limit the probability of their involvement in a fire.

This is to limit the probability of the spread of fire, which could lead to damage to the building.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Storage areas conforming to Subsection 4.2.7., for flammable liquids, combustible liquids or unstable liquids, where the liquids are:
- in quantities in excess of those permitted in Sentences 4.2.5.1.(2) to 4.2.5.1.(5),
- in mercantile occupancies, and
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) having an individual capacity of not more than 2 500 L.

Exception:
everything except as stated in:
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- Sentence 4.2.1.1.(2), which applies to
  - distilled beverage alcohol in closed containers when stored in conformance with Part 3.
  - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
  - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

I1. To override the quantity limits calculated in Sentences 4.2.5.1.(2) to 4.2.5.1.(4) and permit more liquids in a mercantile building if the liquids are stored in a manner that will limit the probability of their involvement in a fire.

This is to limit the probability of the spread of fire, which could lead to harm to persons.

CodeText

5) Quantities of flammable liquids and combustible liquids in excess of those permitted in Sentences (2) to (4), shall be kept in a storage area conforming to Subsection 4.2.7.

Application

A1. Storage areas conforming to Subsection 4.2.7., for flammable liquids, combustible liquids or unstable liquids, where the liquids are
- in quantities in excess of those permitted in Sentences 4.2.5.1.(2) to 4.2.5.1.(5),
- in mercantile occupancies, and
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) having an individual capacity of not more than 2 500 L.

Exception: except as stated in
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”;
  - appliances and their ancillary equipment within the scope of the CAN/CSA-B139,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- Sentence 4.2.1.1.(2), which applies to
  - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
  - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
  - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids with the remainder of the solution being non-flammable, when in closed containers having a capacity of not more than 5 L.

Intent

11. To expand the application of Clause 4.2.7.2.(1)(a) and Sentence 4.2.7.5.(1) [and all related requirements in Subsection 4.2.7.],
Application and intent of Division B provisions

A1. Containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2,500 L, for flammable liquids, combustible liquids or unstable liquids, where the liquids are in mercantile occupancies.

Exception:
- except as stated in Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- Sentence 4.2.1.1.(2), which applies to distilled beverage alcohol in closed containers when stored in conformance with Part 3, food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids (with the remainder of the solution being non-flammable), when in closed containers having a capacity of not more than 5 L.

Intent
I1. To limit the probability of the unnecessary release of flammable vapours or the accidental escape of flammable liquids, which could lead to a fire or explosion hazard in the presence of an ignition source, which could lead to harm to persons.
A1. Maximum height of storage of Class I, Class II or unstable liquids in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2,500 L, for flammable liquids, combustible liquids or unstable liquids, where the liquids are in mercantile occupancies.

Exception:
- except as stated in Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- Sentence 4.2.1.1.(2), which applies to distilled beverage alcohol in closed containers when stored in conformance with Part 3,
- food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
- products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

I1. To limit the probability of the premature collapse of stored products in a fire situation, which could lead to the spread of fire across required aisles and clear spaces, which could lead to damage to the building.
A1. Maximum height of storage of Class I, Class II or unstable liquids in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2500 L, for flammable liquids, combustible liquids or unstable liquids, where the liquids are in mercantile occupancies.

Exception:
- except as stated in Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations";
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of aerosol products covered under Subsection 3.2.5,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- Sentence 4.2.1.1.(2), which applies to distilled beverage alcohol in closed containers when stored in conformance with Part 3,
- food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
- products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent
11. To limit the probability of the premature collapse of stored products, which could lead to the release of liquid and vapours, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Maximum height of storage of Class I, Class II or unstable liquids in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2500 L, for flammable liquids, combustible liquids or unstable liquids, where the liquids are in mercantile occupancies.

Exception: except as stated in:
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- Sentence 4.2.1.1.(2), which applies to distilled beverage alcohol in closed containers when stored in conformance with Part 3,
- food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
- products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Application

F20-OS1.1,OS1.2 and F04-OS1.5

Attribution - functional statement/objective

CodeReference (including record number) 4.2.5.2.(2)-03
CodeText 2) Closed containers of Class I and II liquids shall not be stacked more than 1.5 m high on floors, or 1 m high on individual fixed shelves.

Exception: except as stated in:
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- Sentence 4.2.1.1.(2), which applies to distilled beverage alcohol in closed containers when stored in conformance with Part 3,
- food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
- products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

I1. To limit the probability of the premature collapse of stored products, which could lead to the release of liquid and vapours, which could lead to a fire hazard, which could lead to harm to persons, including emergency responders.

I2. To limit the probability of the premature collapse of stored products during firefighting operations, which could lead to the obstruction of access aisles, which could lead to delays in the egress of persons or the movement of emergency responders.
A1. Storage of Class I liquids
- in closed containers,
- in basements of mercantile occupancies,
- in quantities not in excess of those permitted in Article 4.2.5.1., and
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2,500 L.

Exception: except as stated in
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- Sentence 4.2.1.1.(2), which applies to distilled beverage alcohol in closed containers when stored in conformance with Part 3.
- food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
- products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

Attribute - functional statement/objective

CodeReference (including record number) 4.2.5.3.(1)-01 F01,F43-O51.1

CodeText

1) In mercantile occupancies, the transfer of flammable liquids or combustible liquids from or into containers shall only be permitted in a storage room conforming to Subsection 4.2.9. (See Appendix A.)

Application

A1. Transfer – in mercantile occupancies – of flammable liquids, combustible liquids or unstable liquids into or from containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:

- except as stated in
  - Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - Sentence 4.2.1.1.(2), which applies to
  - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
  - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
  - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

11. To limit the probability of the accidental release of liquid or vapours, which could accumulate to ignitable concentrations, which could lead to a fire or explosion, which could lead to harm to persons.
Application and intent of Division B provisions

Application

1) In mercantile occupancies, the transfer of flammable liquids or combustible liquids from or into containers shall only be permitted in a storage room conforming to Subsection 4.2.9. (See Appendix A.)

Exception:

- except as stated in Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of aerosol products covered under Subsection 3.2.5,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- Sentence 4.2.1.1.(2), which applies to distilled beverage alcohol in closed containers when stored in conformance with Part 3.
- food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
- products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

11. To state the application of Subsection 4.2.9.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Storage, handling and use of flammable liquids, combustible liquids or unstable liquids, where the liquids are
- in business and personal services occupancies,
- in care or detention occupancies,
- in non-residential schools, universities and colleges, and
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:
except as stated in
- Article 4.1.5.8., which applies to the storage of Class I liquids in basements,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- Sentence 4.2.1.1.(2), which applies to
  - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
  - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
  - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent
H. To state the application of Subsection 4.2.6.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.2.6.2.(1)-01
Attribution - functional statement/objective F02.F03-OP1.2

CodeText

Application

A1. Quantities of flammable liquids, combustible liquids or unstable liquids, where the liquids are
- stored in storage cabinets conforming to Subsection 4.2.10. or storage rooms conforming to
  Subsection 4.2.9.,
- in business and personal services occupancies,
- in care or detention occupancies,
- in non-residential schools, universities and colleges,
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not
  more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual
  capacity of not more than 2 500 L, and
- in quantities in excess of those permitted in Sentences 4.2.6.3.(1) and 4.2.6.3.(2).

Exception:

except that the storage room shall not communicate with public portions of the
building, except as stated in
- Subsection 4.2.10., which applies to the total quantity of liquids stored in the cabinets [it shall not
  exceed the quantity permitted for one cabinet],
- Article 4.1.5.8., which applies to the storage of Class I liquids in basements,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of
    Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas
    regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas
    regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash
    points but that may be flammable under certain conditions, and
  - Sentence 4.2.1.1.(2), which applies to
    - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
    - food and pharmaceutical products when in closed containers having a capacity of not more
      than 5 L, and
    - products containing not more than 50% by volume of water-miscible flammable liquids or
      combustible liquids [with the remainder of the solution being non-flammable], when in closed
      containers having a capacity of not more than 5 L.

Intent

I1. To override the quantity limits in Sentences 4.2.6.3.(1) and 4.2.6.3.(2) and permit more liquids in
a building if the liquids are stored in a manner that will limit the probability of their involvement in a
fire occurring in the building.

This is to limit the probability of the spread of fire, which could lead to damage to the building.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

A1. Quantities of flammable liquids, combustible liquids or unstable liquids, where the liquids are
- stored in storage cabinets conforming to Subsection 4.2.10., or storage rooms conforming to Subsection 4.2.9.,
- in business and personal services occupancies,
- in care or detention occupancies,
- in non-residential schools, universities and colleges,
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d)) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L, and
- in quantities in excess of those permitted in Sentences 4.2.6.3.(1) and 4.2.6.3.(2).

Exception:
- except that the total quantity of liquids stored in the cabinets [shall not exceed the quantity permitted for one cabinet],
- Article 4.1.5.8., which applies to the storage of Class I liquids in basements,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- Sentence 4.2.1.1.(2), which applies to distilled beverage alcohol in closed containers when stored in conformance with Part 3,
- food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
- products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

I1. To override the quantity limits in Sentences 4.2.6.3.(1) and 4.2.6.3.(2) and permit more liquids in a building if the liquids are stored in a manner that will limit the probability of their involvement in a fire occurring in the building.

This is to limit the probability of the spread of fire, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Total quantities of flammable liquids, combustible liquids or unstable liquids, where the liquids are
- stored in storage cabinets conforming to Subsection 4.2.10.,
- in business and personal services occupancies,
- in care or detention occupancies,
- in non-residential schools, universities and colleges,
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L, and
- in quantities in excess of those permitted in Sentences 4.2.6.3.(1) and 4.2.6.3.(2).

Exception:
- except as stated in Subsection 4.2.10., which applies to the total quantity of liquids stored in the cabinets [it shall not exceed the quantity permitted for one cabinet],
- Article 4.1.5.B., which applies to the storage of Class I liquids in basements,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- Sentence 5.5.5.1.(2), which applies to laboratories, and
- Sentence 4.2.1.1.(2), which applies to distilled beverage alcohol in closed containers when stored in conformance with Part 3,
- food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
- products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

I1. To override the permission in Sentence 4.2.10.3.(1) to have 3 cabinets per fire compartment.

This is to limit flammable and combustible contents [fire loading] and limit the probability of the spread of a fire involving flammable liquids, combustible liquids or unstable liquids beyond the point of fire origin, which could lead to damage to the building.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.2.6.2.(1)-04

A1. Total quantity of flammable liquids, combustible liquids or unstable liquids, where the liquids are
- stored in storage cabinets conforming to Subsection 4.2.10.,
- in business and personal services occupancies,
- in care or detention occupancies,
- in non-residential schools, universities and colleges,
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L, and
- in quantities in excess of those permitted in Sentences 4.2.6.3.(1) and 4.2.6.3.(2).

Exception:
- except as stated in
  - Subsection 4.2.10., which applies to the total quantity of liquids stored in the cabinets [it shall not exceed the quantity permitted for one cabinet],
  - Article 4.1.5.8., which applies to the storage of Class I liquids in basements,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - Sentence 5.5.5.1.(2) which applies to laboratories, and
  - Sentence 4.2.1.1.(2), which applies to
    - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
    - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
    - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Application

1) Except as permitted in Article 4.2.6.3., flammable liquids and combustible liquids shall be kept in closed containers and stored
a) in cabinets conforming to Subsection 4.2.10., except that the total quantity of flammable liquids and combustible liquids stored in such cabinets shall not exceed the quantity permitted for one cabinet, or
b) in a room having no openings communicating directly with the public portions of the building and conforming to Subsection 4.2.9.

Intent

1) To override the permission in Sentence 4.2.10.3.(1) to have 3 cabinets per fire compartment.

This is to limit flammable and combustible contents [fire loading] and limit the probability of the spread of a fire involving flammable liquids, combustible liquids or unstable liquids beyond the point of fire origin, which could lead to harm to persons.

1) Except as permitted in Article 4.2.6.3., flammable liquids and combustible liquids shall be kept in closed containers and stored

a) in cabinets conforming to Subsection 4.2.10., except that the total quantity of flammable liquids and combustible liquids stored in such cabinets shall not exceed the quantity permitted for one cabinet, or
b) in a room having no openings communicating directly with the public portions of the building and conforming to Subsection 4.2.9.

Application

A1. Containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L, for flammable liquids, combustible liquids or unstable liquids, where the liquids are

- in business and personal services occupancies,
- in care or detention occupancies,
- in non-residential schools, universities and colleges, and
- in quantities in excess of those permitted in Sentences 4.2.6.3.(1) and 4.2.6.3.(2).

Exception:

except as stated in
- Article 4.1.5.8., which applies to the storage of Class I liquids in basements,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of the CAN/CSA-B139,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- Sentence 4.2.1.1.(2), which applies to distilled beverage alcohol in closed containers when stored in conformance with Part 3, food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
- products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids with the remainder of the solution being non-flammable, when in closed containers having a capacity of not more than 5 L.

Intent

1. To limit the probability of the release of flammable vapours or the accidental escape of liquids, which could lead to a fire or explosion hazard in the presence of an ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

CodeText

1) Except as permitted in Article 4.2.6.3., flammable liquids and combustible liquids shall be kept in closed containers and stored

a) in cabinets conforming to Subsection 4.2.10., except that the total quantity of flammable liquids and combustible liquids stored in such cabinets shall not exceed the quantity permitted for one cabinet, or

b) in a room having no openings communicating directly with the public portions of the building and conforming to Subsection 4.2.9.

A1. Storage cabinets and storage rooms for flammable liquids, combustible liquids or unstable liquids, where the liquids are

- in business and personal services occupancies,
- in care or detention occupancies,
- in non-residential schools, universities and colleges,
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L, and
- in quantities in excess of those permitted in Sentences 4.2.6.3.(1) and 4.2.6.3.(2).

Exception:

e except that the storage room shall not communicate with public portions of the building, except as stated in

- Subsection 4.2.10., which applies to the total quantity of liquids stored in the cabinets [it shall not exceed the quantity permitted for one cabinet],
- Article 4.1.5.B., which applies to the storage of Class I liquids in basements,
- Sentence 4.1.1.1.(3), which applies to
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- Sentence 4.2.1.1.(2), which applies to
- distilled beverage alcohol in closed containers when stored in conformance with Part 3,
- food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
- products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

H1. To state the application of Subsections 4.2.9. and 4.2.10.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Maximum quantities of flammable liquids, combustible liquids or unstable liquids stored outside cabinets or rooms required in Article 4.2.6.2., where the liquids are
- in business and personal services occupancies,
- in care or detention occupancies,
- in non-residential schools, universities and colleges, and
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception: except as stated in
- Article 4.1.5.8., which applies to the storage of Class I liquids in basements,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- Sentence 4.2.6.3.(2), which applies to storage in the automotive shops or industrial arts area of an educational facility, and
- Sentence 4.2.1.1.1.(2), which applies to distilled beverage alcohol in closed containers when stored in conformance with Part 3,
- food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
- products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

A2. Subclause 5.5.5.1.(1)(b)(ii) makes these quantity limits also applicable to laboratories [covered in Section 5.5.] when located in a Group B major occupancy [care or detention occupancy], provided these quantities do not exceed the supply necessary for normal laboratory operations.

Attribution - functional statement/objective 4.2.6.3.1-(1)-02

CodeText

1) Except as provided in Sentence (2), the storage of flammable liquids and combustible liquids outside of a cabinet or room required in Article 4.2.6.2. is permitted, provided such storage does not exceed
   a) 10 L, including not more than 5 L of Class I liquids, in a single room, or
   b) 250 L, including not more than 60 L of Class II liquids, or 10 L of Class I liquid, in a single fire compartment having at least a 45 min fire separation.

Application

A1. Maximum quantities of flammable liquids, combustible liquids or unstable liquids stored outside cabinets or rooms required in Article 4.2.6.2., where the liquids are
   - in business and personal services occupancies,
   - in care or detention occupancies,
   - in non-residential schools, universities and colleges, and
   - in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

   Exception:
   except as stated in
   - Article 4.1.5.8., which applies to the storage of Class I liquids in basements,
   - Sentence 4.1.1.1.(3), which applies to
     - appliances and their ancillary equipment within the scope of the "Transportation of Dangerous Goods Regulations",
     - the storage of aerosol products covered under Subsection 3.2.5.,
     - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
     - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
     - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
   - Sentence 4.2.6.3.(2), which applies to storage in the automotive shops or industrial arts area of an educational facility, and
   - Sentence 4.2.1.1.(2), which applies to
     - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
     - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
     - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids (with the remainder of the solution being non-flammable), when in closed containers having a capacity of not more than 5 L.

A2. Subclause 5.5.5.1.(1)(b)(ii) makes these quantity limits also applicable to laboratories [covered in Section 5.5.] when located in a Group B major occupancy [care or detention occupancy], provided these quantities do not exceed the supply necessary for normal laboratory operations.

Intent

I1. To limit flammable and combustible contents [fire loading] in order to limit the probability of the spread of a fire involving flammable liquids, combustible liquids or unstable liquids beyond the point of fire origin, which could lead to harm to persons.

I2. To remove the obligation in Sentence 4.2.6.2.(1) for liquids to be stored in cabinets or rooms if quantities are limited and storage is in a single room or fire compartment having at least a 45 min fire separation.
A1. Maximum quantities of flammable liquids, combustible liquids or unstable liquids stored outside of cabinets or rooms required in Article 4.2.6.2., where the liquids are:
- in automotive shops or industrial arts areas of an educational facility, and
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception: except as stated in:
- Article 4.1.5.8., which applies to the storage of Class I liquids in basements,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- Sentence 4.2.1.1.(2), which applies to the transportation of flammable liquids or combustible liquids in closed containers when stored in conformance with Part 3, food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

I1. To remove the automotive shops or industrial arts areas of educational facilities from the application of the quantity limits in Sentence 4.2.6.3.(1).

I2. To limit flammable and combustible contents [fire loading] in order to limit the probability of the spread of a fire involving flammable liquids, combustible liquids or unstable liquids beyond the point of fire origin, which could lead to damage to the building.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Maximum quantities of flammable liquids, combustible liquids or unstable liquids stored outside of cabinets or rooms required in Article 4.2.6.2., where the liquids are
- in automotive shops or industrial arts areas of an educational facility, and
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:
- Article 4.1.5.8., which applies to the storage of Class I liquids in basements,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- Sentence 4.2.1.1.(2), which applies to
  - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
  - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
  - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Application

4.2.6.3.(2)-02

CodeReference (including record number)

P02-OS1.2

CodeText

2) In the automotive shops or industrial arts area of an educational facility, storage of up to 75 L of flammable liquids and combustible liquids, including not more than 25 L of Class I liquid, shall be permitted outside of a cabinet or room as specified in Article 4.2.6.2.

Application

A1. Maximum quantities of flammable liquids, combustible liquids or unstable liquids stored outside of cabinets or rooms required in Article 4.2.6.2., where the liquids are
- in automotive shops or industrial arts areas of an educational facility, and
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:
- Article 4.1.5.8., which applies to the storage of Class I liquids in basements,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- Sentence 4.2.1.1.(2), which applies to
  - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
  - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
  - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

I1. To remove the automotive shops or industrial arts areas of educational facilities from the application of the quantity limits in Sentence 4.2.6.3.(1).

I2. To limit flammable and combustible contents [fire loading] in order to limit the probability of the spread of a fire involving flammable liquids, combustible liquids or unstable liquids beyond the point of fire origin, which could lead to harm to persons.
Application and intent of Division B provisions

Application

1) Where individual containers with a capacity of more than 5 L are required for storage of flammable liquids or combustible liquids in a building, safety containers conforming to ULC/ORD-C30, "Safety Containers," and of not more than 25 L capacity, shall be used.

Exception:
- except as stated in Article 4.1.5.8., which applies to the storage of Class I liquids in basements,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- Sentence 4.2.1.1.(2), which applies to distilled beverage alcohol in closed containers when stored in conformance with Part 3,
- food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
- products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

I. To override the options offered in Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(e) and limit the choice of containers to those that:
- will limit the probability of the release and ignition of vapours and the escape of liquids under normal conditions, which could lead to rupture or explosion of the container under fire conditions, and
- have a limited capacity and thus do not create a serious fire hazard.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Safety containers – with a capacity of more than 5 L and not more than 25 L and conforming to ULC/ORD-C30, “Safety Containers,” where the liquids are
- in business and personal services occupancies,
- in care or detention occupancies, and
- in non-residential schools, universities and colleges.

Exception: except as stated in
- Article 4.1.5.8., which applies to the storage of Class I liquids in basements,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- Sentence 4.2.1.1.(2), which applies to food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

I1. To direct the Alberta Fire Code 2006 user to Clause 4.2.3.1.(1)(d) for the standard pertaining to safety containers.
Application and intent of Division B provisions
Alberta Fire Code 2006

Application

A1. Separation – from other dangerous goods – of flammable liquids, combustible liquids or unstable liquids stored in cabinets or rooms, where the liquids are

- in business and personal services occupancies,
- in care or detention occupancies,
- in non-residential schools, universities and colleges, and
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2,500 L.

Exception:

except as stated in

- Article 4.1.5.8., which applies to the storage of Class I liquids in basements,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”.
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- Sentence 4.2.1.1.(2), which applies to
  - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
  - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
  - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids (with the remainder of the solution being non-flammable), when in closed containers having a capacity of not more than 5 L.

Intent

I1. To limit the probability of the spread of fire, which could lead to harm to persons.
A1. Separation – from other dangerous goods – of flammable liquids, combustible liquids or unstable liquids stored in cabinets or rooms, where the liquids are
- in business and personal services occupancies,
- in non-residential schools, universities and colleges, and
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:
except as stated in
- Sentence 4.1.1.1.(3), which applies to
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- Sentence 4.2.1.1.(2), which applies to
- distilled beverage alcohol in closed containers when stored in conformance with Part 3,
- food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
- products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent
I1. To direct Alberta Fire Code 2006 users to Article 4.2.2.3.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

1) This Subsection applies to the storage of flammable liquids and combustible liquids in closed containers in industrial occupancies.

Exception:

- Article 4.1.5.8., which applies to the storage of Class I liquids in basements,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

1) To state the application of Subsection 4.2.7.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Buildings used for the storage of flammable liquids, combustible liquids, or unstable liquids.

This applies to the storage of closed containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or closed portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L - in industrial occupancies, - in bulk plants as stated in Sentence 4.7.2.4.(1).

Exception:
except as stated in - Article 4.1.5.8., which applies to the storage of Class I liquids in basements, - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants, - Sentence 4.1.1.1.(3), which applies to - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations", - appliances and their ancillary equipment within the scope of CAN/CSA-B139, - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects, - the storage of aerosol products covered under Subsection 3.2.5., - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act, - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act, - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55, - Sentence 4.2.1.1.(2), which applies to - distilled beverage alcohol in closed containers when stored in conformance with Part 3, - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids (with the remainder of the solution being non-flammable), when in closed containers having a capacity of not more than 5 L.

Intent
Application and intent of Division B provisions

Application

A1. Storage of flammable liquids, combustible liquids or unstable liquids, where the liquids are
- in industrial occupancies,
- in bulk plants as stated in Sentence 4.2.10.,
- in closed containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or closed portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:
- except as stated in
  - Article 4.1.5.8., which applies to the storage of Class I liquids in basements,
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
    - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Sentence 4.2.1.1.(2), which applies to
    - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
    - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
    - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

I1. To offer storage options that will limit the probability that a fire involving the stored products will spread beyond the point of fire origin, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Storage of flammable liquids, combustible liquids or unstable liquids, where the liquids are
- in industrial occupancies,
- in bulk plants as stated in Sentence 4.7.2.4.(1), and
- in closed containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or closed portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:
- except as stated in
  - Article 4.1.5.8., which applies to the storage of Class I liquids in basements,
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
    - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Sentence 4.2.1.1.(2), which applies to
    - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
    - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
    - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

I1. To offer storage options that will limit the probability that a fire involving the stored products will spread beyond the point of fire origin, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Fire separations [in Table 4.2.7.5.A. and Table 4.2.7.5.B.]

1) Fire compartments regulated by this Subsection shall be separated from the remainder of the building by a fire separation having a fire-resistance rating of at least 2 h.

Application

- in storage areas as stated in Clause 4.2.7.2.(1)(a),
- in mercantile occupancies in quantities in excess of those permitted in Sentences 4.2.5.1.(2) to 4.2.5.1.(4) [as stated in Sentence 4.2.5.1.(5)], and
- in closed containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or closed portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:

except as stated in

- Article 4.1.5.8., which applies to the storage of Class I liquids in basements,
- Sentence 4.2.7.5.(2), which applies to storage in a separate building[i.e. Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
- the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.2.1.1.(2), which applies to
- distilled beverage alcohol in closed containers when stored in conformance with Part 3,
- food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
- products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

I1. To limit the probability that a fire involving the stored products will spread to other parts of the building, which could lead to damage to the building.

I2. To limit the probability that activities in other parts of the building will lead to a fire exposure hazard to the stored products, which could lead to damage to the building.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Fire separations [in Table 4.2.7.5.A. and Table 4.2.7.5.B.] for the indoor compartmentation of flammable liquids, combustible liquids or unstable liquids, where the liquids are

- in storage areas as stated in Clause 4.2.7.2.(1)(a),
- in mercantile occupancies in quantities in excess of those permitted in Sentences 4.2.5.1.(2) to 4.2.5.1.(4) [as stated in Sentence 4.2.5.1.(5)], and
- in closed containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or closed portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:

except as stated in

- Article 4.1.5.8., which applies to the storage of Class I liquids in basements,
- Sentence 4.2.7.5.(2), which applies to storage in a separate building,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.2.1.1.(2), which applies to
  - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
  - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
  - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

I1. To limit the probability that a fire involving the stored products will spread beyond the point of fire origin, which could lead to harm to persons in other parts of the building, including emergency responders.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

A1. Dispensing or transfer – indoors in industrial occupancies – of Class I or II liquids from or into - closed containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or - closed portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:
- except as stated in Article 4.1.5.8., which applies to the storage of Class I liquids in basements,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.2.8., which applies to incidental use and storage situations,
- Sentence 4.2.7.4.(2), which applies to small storage areas conforming to Article 4.2.7.5., and
- Sentence 4.2.1.1.(2), which applies to distilled beverage alcohol in closed containers when stored in conformance with Part 3,
- food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
- products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent
I1. To limit the probability that liquid handling operations will lead to a fire or explosion that could involve the entire storage area, which could lead to a very severe fire, which could lead to the spread of fire to other parts of the building, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Dispensing or transfer – indoors in industrial occupancies – of Class I or II liquids from or into:
- closed containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or
- closed portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:
- except as stated in Article 4.1.5.8., which applies to the storage of Class I liquids in basements,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.2.8., which applies to incidental use and storage situations,
- Sentence 4.2.7.4.(2), which applies to small storage areas conforming to Article 4.2.7.5., and
- Sentence 4.2.1.1.(2), which applies to distilled beverage alcohol in closed containers when stored in conformance with Part 3,
- food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
- products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids (with the remainder of the solution being non-flammable), when in closed containers having a capacity of not more than 5 L.

Intent

I1. To limit the probability that liquid handling operations will lead to a fire or explosion that could involve the entire storage area, which could lead to a very severe fire, which could lead to the spread of fire to other parts of the building, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Dispensing or transfer – indoors in industrial occupancies – of Class I or II liquids from or into:
- closed containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or
- closed portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:
- Article 4.1.5.8., which applies to the storage of Class I liquids in basements,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.2.8., which applies to incidental use and storage situations,

- Sentence 4.2.1.1.(2), which applies to distilled beverage alcohol in closed containers when stored in conformance with Part 3,
- food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
- products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids (with the remainder of the solution being non-flammable), when in closed containers having a capacity of not more than 5 L.

Application

Not applicable

Intent

11. To direct the Alberta Fire Code 2006 user to Subsection 4.2.9.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Dispensing or transfer of Class I or II liquids from or into closed containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or closed portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L

- in storage areas that do not exceed 100 m² and conform to Article 4.2.7.5., and
- where the dispensing or transfer operations conform to the applicable requirements of Subsection 4.2.9.

Exception:

- Article 4.1.5.8., which applies to the storage of Class I liquids in basements,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.2.1.1.(2), which applies to
  - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
  - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
  - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

I1. To remove the requirement in Sentence 4.2.7.4.(1) for transfer and dispensing operations to be conducted in specially equipped and protected rooms [conforming to Subsection 4.2.9.] provided

- the operations are conducted in a storage area of limited size, which would minimize the total fire load and thus not pose an undue hazard to other parts of the building if involved in a fire, and
- safety precautions are taken to limit the probability that the operations will lead to a fire or explosion, which could lead to damage to the building or facility.

2) It is permitted to dispense or transfer Class I or II liquids in a storage area conforming to Article 4.2.7.5. provided:
   a) the storage area does not exceed 100 m², and
   b) the dispensing or transfer operations conformance to the applicable requirements of Subsection 4.2.9.

Application

A1. Dispensing or transfer of Class I or II liquids from or into closed containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or closed portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L
   - in storage areas that do not exceed 100 m² and conform to Article 4.2.7.5., and
   - where the dispensing or transfer operations conform to the applicable requirements of Subsection 4.2.9.

Exception:

except as stated in
   - Article 4.1.5.8., which applies to the storage of Class I liquids in basements,
   - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
   - Sentence 4.1.1.1.(3), which applies to
     - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
     - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
   - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
   - the storage of aerosol products covered under Subsection 3.2.5.,
   - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
   - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
   - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
   - the storage and handling of flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
   - Sentence 4.2.1.1.(2), which applies to
     - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
     - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
     - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

I1. To remove the requirement in Sentence 4.2.7.4.(1) for transfer and dispensing operations to be conducted in specially equipped and protected rooms [conforming to Subsection 4.2.9.] provided
   - the operations are conducted in a storage area of limited size, which would minimize the total fire load and thus not pose an undue hazard to other parts of the building if involved in a fire or explosion, which could lead to harm to persons.

CodeText

1) Except as provided in Sentence (2), the storage of flammable liquids and combustible liquids in storage areas specified in Clause 4.2.7.2.(1)(a) shall

a) conform to Table 4.2.7.5.A.

i) where it consists of palletized or solid piled storage, or

ii) where stored in racks in buildings not protected in conformance with Article 4.2.7.6., or

b) conform to Table 4.2.7.5.B. where stored in racks in buildings protected in conformance with Article 4.2.7.6.

Application

A1. Size [total quantity] and location within a building [in Table 4.2.7.5.A. and Table 4.2.7.5.B.] of indoor storage of flammable liquids, combustible liquids or unstable liquids, where the liquids are

- in storage areas as specified in Clause 4.2.7.2.(1)(a),

- in bulk plants as stated in Sentence 4.7.2.4.(1),

- in mercantile occupancies in quantities in excess of those permitted in Sentences 4.2.5.1.(2) to 4.2.5.1.(4) [as stated in Sentence 4.2.5.1.(5)], and

- in closed containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or closed portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

A2. This also applies to the maximum quantities of Class I liquids stored in an unprotected storage room with a fire separation having a fire-resistance rating of not less than 2 h, as stated in Sentence 4.2.9.1.(3).

Exception:

except as stated in

- Article 4.1.5.8., which applies to the storage of Class I liquids in basements,

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,

- Sentence 4.1.1.1.(3), which applies to

- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",

- appliances and their ancillary equipment within the scope of the CAN/CSA-B139,

- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,

- the storage of aerosol products covered under Subsection 3.2.5.,

- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,

- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,

- the storage of liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and

- the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,

- Sentence 4.2.7.5.(2), which applies to buildings specially designed for liquid storage, and

- Sentence 4.2.1.1.(2), which applies to

- distilled beverage alcohol in closed containers when stored in conformance with Part 3,

- food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and

- products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

I1. To limit the probability that a fire involving the stored liquids will spread beyond the storage area to other parts of the building, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Application

F20-OH5

I1. To limit the probability of the premature collapse of stored products, which could lead to the release of liquid and vapours, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Height of indoor storage [in Table 4.2.7.5.A. and Table 4.2.7.5.B.] of flammable liquids, combustible liquids or unstable liquids, where the liquids are - in storage areas as specified in Clause 4.2.7.2.(1)(a), - in general storage areas for incidental use as specified in Sentence 4.2.8.4.(3), - in bulk plants as stated in Sentence 4.7.2.4.(1), - in mercantile occupancies in quantities in excess of those permitted in Sentences 4.2.5.1.(2) to 4.2.5.1.(4) [as stated in Sentence 4.2.5.1.(5)], and - in closed containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or closed portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:

except as stated in - Article 4.1.5.8., which applies to the storage of Class I liquids in basements, - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants, - Sentence 4.1.1.1.(3), which applies to - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”, - appliances and their ancillary equipment within the scope of CAN/CSA-B139, - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects, - the storage of aerosol products covered under Subsection 3.2.5., - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act, - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act, - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55, - Sentence 4.2.7.5.(2), which applies to buildings specially designed for liquid storage, and - Sentence 4.2.1.1.(2), which applies to - distilled beverage alcohol in closed containers when stored in conformance with Part 3, - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

I1. To limit the probability of the premature collapse of stored products, which could lead to the release of liquid and vapours, which could lead to a fire hazard, which could lead to harm to persons.

I2. To limit the probability of the premature collapse of stored products in a fire situation, which could lead to the spread of fire across required aisles and clear spaces, which could lead to harm to persons, including emergency responders.

I3. To limit the probability of the premature collapse of stored products during firefighting operations, which could lead to the obstruction of access aisles, which could negatively affect the safe egress of emergency responders, which could lead to harm to persons, including emergency responders.
Application and intent of Division B provisions

1) Except as provided in Sentence (2), the storage of flammable liquids and combustible liquids in storage areas specified in Clause 4.2.7.2.(1)(a) shall
a) conform to Table 4.2.7.5.A.
   i) where it consists of palletized or solid piled storage, or
   ii) where stored in racks in buildings not protected in conformance with Article 4.2.7.6., or
b) conform to Table 4.2.7.5.B. where stored in racks in buildings protected in conformance with Article 4.2.7.6.

Application

A1. Basement storage [in Table 4.2.7.5.A. and Table 4.2.7.5.B.] of Class I or unstable liquids, where the liquids are
- in storage areas as specified in Clause 4.2.7.2.(1)(a),
- in bulk plants as stated in Sentence 4.7.2.4.(1),
- in mercantile occupancies in quantities in excess of those permitted in Sentences 4.2.5.1.(2) to 4.2.5.1.(4) [as stated in Sentence 4.2.5.1.(5)], and
- in closed containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or closed portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

A2. This also applies to the maximum quantities of Class I liquids stored in an unprotected storage room with a fire separation having a fire-resistance rating of not less than 2 h, as stated in Sentence 4.2.9.1.(3).

Exception:
except as stated in
- Article 4.1.5.8., which applies to the storage of Class I liquids in basements,
- Article 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
   - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
   - appliances and their ancillary equipment within the scope of the Canada/CSA-B139,
   - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
   - the storage of aerosol products covered under Subsection 3.2.5.,
   - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
   - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
   - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
   - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.2.7.5.(2), which applies to buildings specially designed for liquid storage, and
- Sentence 4.2.7.5.(3), which applies to
   - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
   - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
   - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

I1. To limit the probability of the release of flammable vapour in low areas of a building where the vapour could accumulate to ignitable concentrations, which could lead to a fire or explosion, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.2.7.5.(2)-01
Attribution - functional statement/objective F03-OP1.2

CodeText

2) Where a building or part of building is designed for the storage of flammable liquids or combustible liquids, there is no limit on the total quantity of storage per fire compartment provided the building or part of building is separated from adjacent buildings or parts of buildings by
a) a firewall having a fire-resistance rating of at least 4 h, or
b) spatial separation in conformance with the Alberta Building Code 2006.
(See Appendix A.)

Application

A1. Size [total quantity] per fire compartment [in Table 4.2.7.5.A. and Table 4.2.7.5.B.] of indoor storage of flammable liquids, combustible liquids or unstable liquids, where the liquids are
- in storage areas as specified in Clause 4.2.7.2.(1)(a),
- in bulk plants as stated in Sentence 4.7.2.4.(1),
- in mercantile occupancies in quantities in excess of those permitted in Sentences 4.2.5.1.(2) to 4.2.5.1.(4) (as stated in Sentence 4.2.5.1.(5)),
- in closed containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or closed portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L, and
- in buildings separated from adjacent buildings by a firewall having a fire-resistance rating of at least 4 h, or by spatial separation in conformance with the Alberta Building Code 2006.

Exception:
except as stated in
- Article 4.1.5.8., which applies to the storage of Class I liquids in basements,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.2.1.1.(2), which applies to
- distilled beverage alcohol in closed containers when stored in conformance with Part 3,
- food and pharmaceutical products when in closed containers having a capacity of no more than 5 L, and
- products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

I1. To waive the total quantity limits per fire compartment in Sentence 4.2.7.5.(1) [in Table 4.2.7.5.A. and Table 4.2.7.5.B.] and allow unlimited quantities to be stored in a storage area if the storage area is isolated in such a manner as to limit the probability of:

- the spread of a fire involving the stored liquids beyond the storage area to other buildings or parts of the building, and

- the involvement of stored products in a fire originating outside of the storage area.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Size (total quantity) per fire compartment (in Table 4.2.7.5.A, and Table 4.2.7.5.B.) of indoor storage of flammable liquids, combustible liquids or unstable liquids, where the liquids are
- in storage areas as specified in Clause 4.2.7.2.(1)(a),
- in bulk plants as stated in Sentence 4.7.2.4.(1),
- in mercantile occupancies in quantities in excess of those permitted in Sentences 4.2.5.1.(2) to 4.2.5.1.(4) (as stated in Sentence 4.2.5.1.(5)),
- in closed containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or closed portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L, and
- in buildings separated from adjacent buildings by a firewall having a fire-resistance rating of at least 4 h, or by spatial separation in conformance with the Alberta Building Code 2006.

Exception:
- except as stated in - Article 4.1.5.8., which applies to the storage of Class I liquids in basements,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.2.1.1.(2), which applies to - distilled beverage alcohol in closed containers when stored in conformance with Part 3, - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids (with the remainder of the solution being non-flammable), when in closed containers having a capacity of not more than 5 L.

Intent

I1. To waive the total quantity limits per fire compartment in Sentence 4.2.7.5.(1) (in Table 4.2.7.5.A, and Table 4.2.7.5.B.) and allow unlimited quantities to be stored in a storage area if the storage area is isolated in such a manner as to limit the probability of - the spread of a fire involving the stored liquids beyond the storage area to other buildings or parts of the building, and - the involvement of stored products in a fire originating outside of the storage area.

A1. Size [quantity] and clearances of individual storage areas [in Table 4.2.7.5.B.] of indoor protected rack storage of flammable liquids, combustible liquids or unstable liquids, where the liquids are

- in storage areas as specified in Clause 4.2.7.2.(1)(a),
- in bulk plants as stated in Sentence 4.7.2.4.(1),
- in mercantile occupancies in quantities in excess of those permitted in Sentences 4.2.5.1.(2) to 4.2.5.1.(4)[as stated in Sentence 4.2.5.1.(5)],
- in closed containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or closed portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L, and
- in buildings separated from adjacent buildings by a firewall having a fire-resistance rating of at least 4 h, or by spatial separation in conformance with the Alberta Building Code 2006.

Exception:

except as stated in
- Article 4.1.5.8., which applies to the storage of Class I liquids in basements,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Article 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Sentence 4.2.1.1.(2), which applies to
    - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
    - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
    - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

I1. To clarify what quantity limits apply to a storage situation for which there would otherwise be no applicable requirement in Table 4.2.7.5.A. and Table 4.2.7.5.B., referenced in Sentences 4.2.5.1.(2) and 4.2.7.5.(1).

I2. To state the allowable quantities per individual storage area for protected rack storage.
Application of Division B provisions
Alberta Fire Code 2006

A1. Size [quantity] and clearances per individual storage area [in Table 4.2.7.5.A. and Table 4.2.7.5.B.] of indoor storage of more than one class of flammable liquid, combustible liquid or unstable liquid, where the liquids are
- in storage areas as specified in Clause 4.2.7.2.(1)(a),
- in bulk plants as stated in Sentence 4.7.2.4.(1),
- in mercantile occupancies in quantities in excess of those permitted in Sentences 4.2.5.1.(2) to 4.2.5.1.(3), and
- in closed containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or closed portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

A2. This also applies to the maximum quantities of Class I liquids stored in an unprotected storage room with a fire separation having a fire-resistance rating of not less than 2 h, as stated in Sentence 4.2.9.1.(3).

Exception: except as stated in
- Article 4.1.5.8., which applies to the storage of Class I liquids in basements,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to-
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.2.1.1.(2), which applies to-
  - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
  - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
  - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Application

A1. Size [quantity] and clearances per individual storage area [in Table 4.2.7.5.A. and Table 4.2.7.5.B.] of indoor storage of more than one class of flammable liquid, combustible liquid or unstable liquid, where the liquids are
- in storage areas as specified in Clause 4.2.7.2.(1)(a),
- in bulk plants as stated in Sentence 4.7.2.4.(1),
- in mercantile occupancies in quantities in excess of those permitted in Sentences 4.2.5.1.(2) to 4.2.5.1.(3), and
- in closed containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or closed portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

A2. This also applies to the maximum quantities of Class I liquids stored in an unprotected storage room with a fire separation having a fire-resistance rating of not less than 2 h, as stated in Sentence 4.2.9.1.(3).

Exception: except as stated in
- Article 4.1.5.8., which applies to the storage of Class I liquids in basements,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to-
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.2.1.1.(2), which applies to-
  - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
  - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
  - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

11. To clarify what quantity limits apply to a storage situation for which there would otherwise be no applicable requirement in Table 4.2.7.5.A. and Table 4.2.7.5.B., referenced in Sentences 4.2.5.1.(2) and 4.2.7.5.(1).
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Size [total quantity] per fire compartment [in Table 4.2.7.5.A.] of the indoor storage of more than one class of flammable liquid, combustible liquid or unstable liquid, where the liquids are:
- in storage areas as specified in Clause 4.2.7.2.(1)(a),
- in bulk plants as stated in Sentence 4.7.2.4.(1),
- in mercantile occupancies in quantities in excess of those permitted in Sentences 4.2.5.1.(2) to 4.2.5.1.(4) [as stated in Sentence 4.2.5.1.(5)], and
- in closed containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or closed portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

A2. This also applies to the maximum quantities of Class I liquids stored in an unprotected storage room with a fire separation having a fire-resistance rating of not less than 2 h, as stated in Sentence 4.2.9.1.(3).

Exception:
- except as stated in Article 4.1.5.8., which applies to the storage of Class I liquids in basements,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.2.1.1.(2), which applies to distilled beverage alcohol in closed containers when stored in conformance with Part 3,
- food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
- products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

I1. To clarify what quantity limits apply to a storage situation for which there would otherwise be no applicable requirement in Table 4.2.7.5.A. and Table 4.2.7.5.B., referenced in Sentences 4.2.5.1.(2) and 4.2.7.5.(1).
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.2.7.6.(1)-01
Attribution - functional statement/objective F02-OP1.1

CodeText
1) Where protection is required by this Code, storage areas for flammable liquids and combustible liquids shall be
a) sprinklered in conformance with NFPA 30, "Flammable and Combustible Liquids Code," or
b) protected by an automatic fire suppression system.
(See Appendix A.)

Application
A1. Design and installation of sprinkler and automatic fire suppression systems in areas used for the indoor storage of flammable liquids, combustible liquids or unstable liquids, where the liquids are
- in storage areas in industrial occupancies, as stated in Sentence 4.2.7.5.(1),
- in rooms for container storage and dispensing as stated in Sentence 4.2.9.1.(2),
- in rooms for storage tanks as stated in Clauses 4.3.12.4.(1)(b) and 4.3.12.4.(2)(a) and in Sentence 4.3.12.6.(1),
- in bulk plants as stated in Sentence 4.7.2.4.(1), and
- in closed containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or in closed portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:
except as stated in
- Article 4.1.5.8., which applies to the storage of Class I liquids in basements,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.2.1.1.(2), which applies to
  - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
  - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
  - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent
I. To limit the probability of the spread of a fire in stored products to other parts of the building, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

1) Where protection is required by this Code, storage areas for flammable liquids and combustible liquids shall be
   a) sprinklered in conformance with NFPA 30, "Flammable and Combustible Liquids Code," or
   b) protected by an automatic fire suppression system.
   (See Appendix A.)

Application

A1. Design and installation of sprinkler and automatic fire suppression systems in areas used for the indoor storage of flammable liquids, combustible liquids or unstable liquids, where the liquids are
   - in storage areas in industrial occupancies, as stated in Sentence 4.2.7.5.(1),
   - in rooms for container storage and dispensing as stated in Sentence 4.2.9.1.(2),
   - in rooms for storage tanks as stated in Clauses 4.3.12.4.(1)(b) and 4.3.12.4.(2)(a) and in Sentence 4.3.12.6.(1),
   - in bulk plants as stated in Sentence 4.7.2.4.(1), and
   - in closed containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or in closed portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:

except as stated in
   - Article 4.1.5.8., which applies to the storage of Class I liquids in basements,
   - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
   - Sentence 4.1.1.1.(3), which applies to
     - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
     - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
   - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
   - the storage of aerosol products covered under Subsection 3.2.5.,
   - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
   - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
   - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
   - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
   - Sentence 4.2.1.1.(2), which applies to
     - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
     - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
     - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

I1. To limit the probability of the spread of a fire in stored products to other parts of the building, which could lead to harm to persons.
Application and intent of Division B provisions

Application
A1. Design and installation of sprinkler and automatic fire suppression systems in areas used for the indoor storage of flammable liquids, combustible liquids or unstable liquids, where the liquids are
- in storage areas in industrial occupancies, as stated in Sentence 4.2.7.5.(1),
- in rooms for container storage and dispensing as stated in Sentence 4.2.9.1.(2),
- in rooms for storage tanks as stated in Clauses 4.3.12.4.(1)(b) and 4.3.12.4.(2)(a) and in Sentence 4.3.12.6.(1),
- in bulk plants as stated in Sentence 4.7.2.4.(1), and
- in closed containers as stated in Sentence 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or in closed portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:
except as stated in
- Article 4.1.5.8., which applies to the storage of Class I liquids in basements,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.2.1.1.(2), which applies to
- distilled beverage alcohol in closed containers when stored in conformance with Part 3,
- food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
- products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent
I1. To direct Alberta Fire Code 2006 users to Article 2.1.3.5. for the design and installation of automatic fire suppression systems.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Vertical clear space between the top of storage and the lowest structural members, in areas used for the storage of flammable liquids, combustible liquids or unstable liquids, where the liquids are

- in industrial occupancies,
- in mercantile occupancies in quantities in excess of those permitted by Sentences 4.2.5.1.(2) to 4.2.5.1.(4), as stated in Sentence 4.2.5.1.(5),
- in bulk plants, as stated in Sentence 4.7.2.4.(1), or
- in closed containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or in closed portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception: except as stated in

- Article 4.1.5.8., which applies to the storage of Class I liquids in basements,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- released halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.2.1.1.(2), which applies to distilled beverage alcohol in closed containers when stored in conformance with Part 3, and
- food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
- products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

I1. To limit the probability that, in a fire situation, excessively high temperatures will lead to the failure of structural members, which could lead to the premature collapse of the building, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number)  4.2.7.7.(1)-02
Attribution - functional statement/objective  F04-O51.3

CodeText

1) The clearance between the top of storage and the lowest structural members shall not be less than 450 mm.

Application

A1. Vertical clear space between the top of storage and the lowest structural members, in areas used for the storage of flammable liquids, combustible liquids or unstable liquids, where the liquids are:

- in industrial occupancies,
- in mercantile occupancies in quantities in excess of those permitted by Sentences 4.2.5.1.(2) to 4.2.5.1.(4), as stated in Sentence 4.2.5.1.(5),
- in bulk plants, as stated in Sentence 4.7.2.4.(1), or
- in closed containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or in closed portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:

except as stated in:

- Article 4.1.5.8., which applies to the storage of Class I liquids in basements,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to

- the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act, the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.2.1.1.(2), which applies to

- distilled beverage alcohol in closed containers when stored in conformance with Part 3,
- food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
- products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

I1. To limit the probability that, in a fire situation, excessively high temperatures will lead to the failure of structural members, which could lead to the premature collapse of the building, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Attribution - functional statement/objective F02-OP.1.2

2) The clearance between the top of storage and the ceiling sprinkler deflectors or other overhead fire protection systems shall be in accordance with the standard used for the design of the respective system.

Application

A1. Vertical clear space between the top of storage and sprinkler head deflectors or other overhead fire protection system components, in areas used for the storage of flammable liquids, combustible liquids or unstable liquids, where the liquids are

- in industrial occupancies,
- in mercantile occupancies in quantities in excess of those permitted by Sentences 4.2.5.1.(2) to 4.2.5.1.(4), as stated in Sentence 4.2.5.1.(5),
- in bulk plants, as stated in Sentence 4.7.2.4.(1), or
- in closed containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or in closed portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:

except as stated in

- Article 4.1.5.8., which applies to the storage of Class I liquids in basements,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.2.1.1.(2), which applies to
  - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
  - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
  - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids with the remainder of the solution being non-flammable, when in closed containers having a capacity of not more than 5 L.

Intent

I1. To limit the probability that obstructions or obstacles will impede the distribution of water from sprinkler systems, which could lead to the spread of fire beyond the point of origin, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.2.7.7.(2)-02
Attribution - functional statement/objective F02-O51.2

Application

A1. Vertical clear space between the top of storage and sprinkler head deflectors or other overhead fire protection system components, in areas used for the storage of flammable liquids, combustible liquids or unstable liquids, where the liquids are

- in industrial occupancies, where the liquids are in quantities in excess of those permitted by Sentences 4.2.5.1.(2) to 4.2.5.1.(4), as stated in Sentence 4.2.5.1.(5),
- in bulk plants, as stated in Sentence 4.7.2.4.(1), or
- in closed containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or in closed portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:

except as stated in

- Article 4.1.5.8., which applies to the storage of Class I liquids in basements,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.2.1.1.(2), which applies to
  - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
  - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
  - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

I1. To limit the probability that obstructions or obstacles will impede the distribution of water from sprinkler systems, which could lead to the spread of fire beyond the point of origin, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Minimum wall clearances between stored flammable liquids, combustible liquids, and unstable liquids, and walls where the width of storage adjacent to the wall is not more than 1.5 m, such wall clearance is not required. (See Appendix A.)

Exception:
each as stated in
- Article 4.1.5.8., which applies to the storage of Class I liquids in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.2.1.1.(2), which applies to
  - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
  - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
  - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

I1. To limit the probability that protrusions of the wall surface will lead to damage or puncture of containers of liquids, which could lead to the release of product, which could lead to a fire or explosion hazard, which could lead to harm to persons, including emergency responders.

I2. To limit the probability that unsafe storage conditions or leaking containers will remain unnoticed, which could lead to the release of product, which could lead to a fire or explosion hazard, which could lead to harm to persons, including emergency responders.

I3. To limit the probability that persons will be trapped in a dead-end aisle in a fire emergency situation, which could lead to delays in evacuation or emergency response, which could lead to harm to persons, including emergency responders.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Main aisles, access aisles and aisles defining individual storage areas, shall be in conformance with Article 3.2.2.2.

Exception:

- Article 4.1.5.8., which applies to the storage of Class I liquids in basements,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.2.1.1.(2), which applies to food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
- products containing not more than 5% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

I1. To direct Alberta Fire Code 2006 users to Article 3.2.2.2.
Application and intent of Division B provisions  
Alberta Fire Code 2006  

A1. Separation of flammable liquids, combustible liquids and unstable liquids from other dangerous goods in areas used for the indoor storage of these liquids, where the liquids are  
- in industrial occupancies,  
- in mercantile occupancies in quantities in excess of those permitted in Sentences 4.2.5.1.(2) to 4.2.5.1.(4) (as stated in Sentence 4.2.5.1.(5)),  
- in bulk plants as stated in Sentence 4.7.2.4.(1), and  
- in closed containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or closed portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:  
except as stated in  
- Article 4.1.5.8., which applies to the storage of Class I liquids in basements,  
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,  
- Sentence 4.1.1.1.(3), which applies to  
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,  
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,  
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,  
  - the storage of aerosol products covered under Subsection 3.2.5.,  
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,  
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,  
- Sentence 4.2.1.1.(2), which applies to  
  - distilled beverage alcohol in closed containers when stored in conformance with Part 3,  
  - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and  
  - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids (with the remainder of the solution being non-flammable), when in closed containers having a capacity of not more than 5 L.

Intent  
I1. To direct Alberta Fire Code 2006 users to Article 4.2.2.3.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Separation of flammable liquids, combustible liquids and unstable liquids from products listed in Sentence 3.2.1.1.(1) – other than Class I commodities – in areas used for the indoor storage of these liquids, where the liquids are
- in industrial occupancies,
- in mercantile occupancies in quantities in excess of those permitted by Sentences 4.2.5.1.(2) to 4.2.5.1.(4), as stated in Sentence 4.2.5.1.(5),
- in bulk plants, as stated in Sentence 4.7.2.4.(1), and
- in closed containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or in closed portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:
- Article 4.1.5.8., which applies to the storage of Class I liquids in basements,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
- the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 4.3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- volatile halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.2.1.1.(2), which applies to
- distilled beverage alcohol in closed containers when stored in conformance with Part 3,
- food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
- products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

I1. To limit the probability that a fire involving the products will spread to the stored liquids, which could impede firefighting operations, which could lead to the spread of fire, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Absorbent materials used to clean up spills of flammable liquids, combustible liquids or unstable liquids in areas used for the indoor storage of these liquids, where the liquids are
- in industrial occupancies,
- in mercantile occupancies in quantities in excess of those permitted in Sentences 4.2.5.1.(2) to 4.2.5.1.(4) (as stated in Sentence 4.2.5.1.(5)),
- in bulk plants as stated in Sentence 4.7.2.4.(1), and
- in closed containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or closed portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:
- except as stated in
  - Article 4.1.5.8., which applies to the storage of Class I liquids in basements,
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.2.1.1.(2), which applies to
  - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
  - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
  - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent
I1. To direct Alberta Fire Code 2006 users to Article 4.1.6.3.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.2.8.1.(1)-01
Attribution - functional statement/objective Not applicable

CodeText

1) Except as otherwise noted in this Part, this Subsection applies to industrial occupancies where the use, storage and handling of flammable liquids or combustible liquids is secondary to the principal activity. (See Appendix A.)

Application

A1. Indoor and outdoor storage, handling and use of flammable liquids, combustible liquids and unstable liquids
- where the storage, handling and use of the liquids is secondary to the principal activity,
- where the liquids are in industrial occupancies, and
- where the liquids are in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2,500 L.

Exception:
- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Article 4.1.5.8., which applies to the storage of Class I liquids in basements, and
  - Sentence 4.2.2.1.(2), which applies to
    - fuel-dispensing stations, bulk plants, refineries and distilleries,
    - liquids in motor or engine fuel tanks,
    - distilled beverage alcohol in closed containers when stored in conformance with Part 3.
  - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
  - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

I1. To state the application of Subsection 4.2.8.
I2. To clarify that more specific requirements in other parts of the Alberta Fire Code 2006 are intended to take precedence in the case of conflicts with the general provisions of this Subsection.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Maximum quantity of flammable liquids, combustible liquids and unstable liquids
- where the storage, handling and use of the liquids is secondary to the principal activity,
- where the liquids are in industrial occupancies,
- where the liquids are located in the open in any one fire compartment, and
- where the liquids are in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:
- except as stated in
  - Sentence 4.2.8.4.(1), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
    - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
    - Article 4.1.5.8., which applies to the storage of Class I liquids in basements,
    - Subsections 4.2.7., 4.2.9., and 4.2.10., which apply to container storage in rooms or cabinets,
    - Subsection 4.3.1.3., which applies to tank storage in rooms,
    - Sentence 5.4.6.2.(1), which applies to dipping and coating processes,
    - Sentence 5.5.5.1.(1), which applies to laboratories, and
    - Sentence 4.2.1.1.(2), which applies to
      - fuel-dispensing stations, bulk plants, refineries and distilleries,
      - liquids in motor or engine fuel tanks,
      - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
      - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
      - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent
I. To limit the probability that excessive quantities of liquids will be involved in a fire, which could contribute to the spread of fire beyond the point of fire origin, which could lead to damage to the building.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number)  4.2.8.2.(1)-02
Attribution - functional statement/objective  P02-O51.2

CodeText

1) Except as provided in Sentences (2) and (3) and in Article 4.2.8.4., the quantity of flammable liquids and combustible liquids permitted to be located outside of storage rooms conforming to Subsections 4.2.7., 4.2.9. or 4.3.13., or storage cabinets conforming to Subsection 4.2.10., in any one fire compartment of a building, shall not be more than

a) 600 L of flammable liquids and combustible liquids in closed containers, of which not more than 100 L shall be Class IA liquids, and
b) 5 000 L of Class IB, IC, II and IIIA liquids in storage tanks or portable tanks.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of the code made pursuant to the Safety Codes Act,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Article 4.1.5.6., which applies to the storage of Class I liquids in basements,
- Sentences 4.2.8.2.(2) and 4.2.8.2.(3), which apply where larger quantities are required for normal activity,
- Article 4.2.8.4., which applies to containers in general storage areas,
- Subsections 4.2.7., 4.2.9., and 4.2.10., which apply to container storage in rooms or cabinets,
- Subsection 4.3.1.3., which applies to tank storage in rooms,
- Sentence 5.4.6.2.1.(1), which applies to dipping and coating processes,
- Sentence 5.5.5.1.1.(1), which applies to laboratories, and
- Sentence 4.2.11.1.(2), which applies to
  - fuel-dispensing stations, bulk plants, refineries and distilleries,
- liquids in motor or engine fuel tanks,
- distilled beverage alcohol in closed containers when stored in conformance with Part 3,
- food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
- products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

I1. To limit the probability that excessive quantities of liquids will be involved in a fire, which could contribute to the spread of fire beyond the point of fire origin, which could lead to harm to persons.
Application and intent of Division B provisions
Alberta Fire Code 2006

Application
A1. Quantities – in excess of those specified in Sentence 4.2.8.2.(1) – of flammable liquids, combustible liquids and unstable liquids
- where the storage, handling and use of the liquids is secondary to the principal activity,
- where the quantities are not greater than the supply for one day of normal operation,
- where the liquids are in industrial occupancies,
- where the liquids are located in the open in any one fire compartment, and
- where the liquids are in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions,
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Article 4.1.5.8., which applies to the storage of Class I liquids in basements,
- Sentence 4.2.8.2.(3), which applies where larger quantities are required for normal activity,
- Article 4.2.8.4., which applies to containers in general storage areas,
- Subsections 4.2.7., 4.2.9., and 4.2.10., which apply to container storage in rooms or cabinets,
- Subsection 4.3.1.3., which applies to tank storage in rooms,
- Sentence 5.4.5.2.(1), which applies to spray coating operations,
- Sentence 5.4.6.2.(1), which applies to dipping and coating processes,
- Sentence 5.5.5.1.(1), which applies to laboratories, and
- Sentence 4.2.1.1.(2), which applies to
- fuel-dispensing stations, bulk plants, refineries and distilleries,
- liquids in motor or engine fuel tanks,
- distilled beverage alcohol in closed containers when stored in conformance with Part 3,
- food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
- products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids with the remainder of the solution being non-flammable, when in closed containers having a capacity of not more than 5 L.

Intent
I1. To override the limits in Sentence 4.2.8.2.(1) and permit more liquids in a building if the liquid quantities are required for normal plant activity and the quantities are limited to a level not greater than the supply for one day of normal operation.

This is to limit the probability that excessive quantities of liquids will become involved in a fire occurring in the building, which could contribute to the spread of fire, which could lead to damage to the building.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeText

2) Where required for normal plant activity, quantities of flammable liquids and combustible liquids are permitted to exceed those specified in Sentence (1), but shall not be greater than the supply for one day of normal operation.

Application

A1. Quantities – in excess of those specified in Sentence 4.2.8.2.(1) – of flammable liquids, combustible liquids and unstable liquids
- where the storage, handling and use of the liquids is secondary to the principal activity,
- where the quantities are not greater than the supply for one day of normal operation,
- where the liquids are in industrial occupancies,
- where the liquids are located in the open in any one fire compartment, and
- where the liquids are in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
- the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Article 4.1.5.8., which applies to the storage of Class I liquids in basements,
- Sentence 4.2.8.2.(3), which applies where larger quantities are required for normal activity,
- Article 4.2.8.4., which applies to containers in general storage areas,
- Subsections 4.2.7., 4.2.9., and 4.2.10., which apply to container storage in rooms or cabinets,
- Subsection 4.3.1.3, which applies to tank storage in rooms,
- Sentence 5.4.5.2.(1), which applies to spray coating operations,
- Sentence 5.4.6.2(1), which applies to dipping and coating processes,
- Sentence 5.5.5.1.(1), which applies to laboratories, and
- Sentence 4.2.1.1.(2), which applies to
- fuel-dispensing stations, bulk plants, refineries and distilleries,
- liquids in motor or engine fuel tanks,
- distilled beverage alcohol in closed containers when stored in conformance with Part 3,
- food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
- products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids (with the remainder of the solution being non-flammable), when in closed containers having a capacity of not more than 5 L.

Intent

I1. To override the limits in Sentence 4.2.8.2.(1) and permit more liquids in a building if the liquid quantities are required for normal plant activity and the quantities are limited to a level not greater than the supply for one day of normal operation.

This is to limit the probability that excessive quantities of liquids will become involved in a fire occurring in the building, which could contribute to the spread of fire, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Storage tanks – installed in conformance with Sentence 4.3.12.4.(2) – for flammable liquids, combustible liquids and unstable liquids:
- where the storage, handling and use of the liquids is secondary to the principal activity,
- where the quantities of the liquids are larger than are permitted by Sentence 4.2.8.2.(2),
- where the quantities are required for normal plant activity,
- where the liquids are in industrial occupancies,
- where the liquids are located in the open in any one fire compartment, and
- where the liquids are in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:
except as stated in:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Article 4.1.5.8., which applies to the storage of Class I liquids in basements,
- Article 4.2.8.4., which applies to containers in general storage areas,
- Subsections 4.2.7., 4.2.9., and 4.2.10., which apply to container storage in rooms or cabinets,
- Subsection 4.3.1.3., which applies to tank storage in rooms,
- Sentence 5.4.5.2.(1), which applies to spray coating operations,
- Sentence 5.4.6.2.(1), which applies to dipping and coating processes,
- Sentence 5.5.5.1.(1), which applies to laboratories, and
- Sentence 4.2.1.1.(2), which applies to:
  - fuel-dispensing stations, bulk plants, refineries and distilleries,
  - liquids in motor or engine fuel tanks,
  - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
  - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
  - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids (with the remainder of the solution being non-flammable), when in closed containers having a capacity of not more than 5 L.

Intent
I1. To override the limits in Sentence 4.2.8.2.(2) and permit more liquids in a building if the liquid quantities are required for normal plant activity and the quantities are stored in tanks.

This is to limit the probability that the liquids will become involved in a fire occurring in the building, which could contribute to the spread of fire, which could lead to damage to the building.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Storage tanks – installed in conformance with Sentence 4.3.12.4.(2) – for flammable liquids, combustible liquids and unstable liquids,
- where the storage, handling and use of the liquids is secondary to the principal activity,
- where the quantities of the liquids are larger than are permitted by Sentence 4.2.8.2.(2),
- where the quantities are required for normal plant activity,
- where the liquids are in industrial occupancies,
- where the liquids are located in the open in any one fire compartment, and
- where the liquids are in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,

A1. Separation – from possible sources of ignition – of areas used for the transfer of flammable liquids, combustible liquids or unstable liquids, or the separation – from possible sources of ignition – of areas used in such a way as to release potentially explosive concentrations of flammable vapours, shall be separated from possible sources of ignition by a spatial separation of not less than 6 m, or by a fire separation. (See Appendix A.) (See also A-4.1.5.2.(1) in Appendix A.)

Application

1) Areas in which flammable liquids or combustible liquids are transferred from one container or storage tank to another, or where they are used in such a way as to release potentially explosive concentrations of flammable vapours, shall be separated from possible sources of ignition by a spatial separation of not less than 6 m, or by a fire separation. (See Appendix A.) (See also A-4.1.5.2.(1) in Appendix A.)

Application

A1. Separation – from possible sources of ignition – of areas used for the transfer of flammable liquids, combustible liquids or unstable liquids, or the separation – from possible sources of ignition – of areas used in such a way as to release potentially explosive concentrations of flammable vapours:
- where the transfer or use of the liquids is secondary to the principal activity,
- where the transfer of the liquids is from or into containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or from or into portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L, and
- where the transfer or use of the liquids is in industrial occupancies.

Exception:
- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”;
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139;
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects;
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
    - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Article 4.1.5.8., which applies to the storage of Class I liquids in basements,
  - Sentence 4.2.1.1.(2), which applies to:
    - fuel-dispensing stations, bulk plants, refineries and distilleries,
    - liquids in motor or engine fuel tanks,
    - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
    - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
    - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

11. To limit the probability of the ignition of flammable liquids or combustible liquids, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Storage of flammable liquids, combustible liquids and unstable liquids in quantities in excess of the quantities specified in Clause 4.2.8.2.1(a) per fire compartment, where the liquids are stored
- where the storage is secondary to the principal activity,
- in industrial occupancies,
- in a general storage area covered in Subsection 3.2.3., and
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

1) In a general storage area covered in Subsection 3.2.3., quantities of flammable liquids and combustible liquids are permitted to exceed those in Sentence 4.2.8.2.1 provided the storage area is in conformance with Sentences (2) to (6).

Application

1) In a general storage area covered in Subsection 3.2.3., quantities of flammable liquids and combustible liquids are permitted to exceed those in Sentence 4.2.8.2.1 provided the storage area is in conformance with Sentences (2) to (6).

Application

I1. To override the limits in Sentence 4.2.8.2.1 and permit more liquids in a building if the liquids are stored in a manner that will limit the probability of the spread of fire, which could lead to damage to the building.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

Application

A1. Storage of flammable liquids, combustible liquids and unstable liquids in quantities in excess of the quantities specified in Clause 4.2.8.2.1(a) per fire compartment, where the liquids are stored
- where the storage is secondary to the principal activity,
- in industrial occupancies,
- in a general storage area covered in Subsection 3.2.3., and
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,

- Article 4.1.5.8., which applies to the storage of Class I liquids in basements;
- Subsections 4.2.7., 4.2.9. and 4.2.10., which apply to container storage in rooms or cabinets, Subsection 4.3.1.3., which applies to tank storage in rooms, and Sentence 4.2.1.1.(2), which applies to fuel-dispensing stations, bulk plants, refineries and distilleries,
- liquids in motor or engine fuel tanks,
- distilled beverage alcohol in closed containers when stored in conformance with Part 3, food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

I. To override the limits in Sentence 4.2.8.2.1(1) and permit more liquids in a building if the liquids are stored in a manner that will limit the probability of the spread of fire, which could lead to harm to persons.

Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Storage of flammable liquids, combustible liquids and unstable liquids in quantities in excess of the quantities specified in Clause 4.2.8.2.(1)(a) per fire compartment, where the liquids are stored - where the storage is secondary to the principal activity, - in industrial occupancies, - in a general storage area covered in Subsection 3.2.3., and - in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception: except as stated in - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants, - Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”, - appliances and their ancillary equipment within the scope of CAN/CSA-B139, - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects, - the storage of aerosol products covered under Subsection 3.2.5., - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act, - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act, - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55, - Article 4.1.5.8., which applies to the storage of Class I liquids in basements, - Subsections 4.2.7., 4.2.9. and 4.2.10., which apply to container storage in rooms or cabinets, - Subsection 4.3.1.3., which applies to tank storage in rooms, and - Sentence 4.2.1.1.(2), which applies to: - fuel-dispensing stations, bulk plants, refineries and distilleries, - liquids in motor or engine fuel tanks, - distilled beverage alcohol in closed containers when stored in conformance with Part 3, - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

1) In a general storage area covered in Subsection 3.2.3., quantities of flammable liquids and combustible liquids are permitted to exceed those in Sentence 4.2.8.2.(1) provided the storage area is in conformance with Sentences (2) to (6).

Application

2) The storage area referred to in Sentence (1) shall be sprinklered in conformance with Article 3.2.3.3., providing a level of protection not less than that required for Class IV commodities stored up to a height of 6 m.

Application

A1. Design and installation of sprinkler systems protecting the storage of flammable liquids, combustible liquids and unstable liquids in quantities in excess of the quantities specified in Clause 4.2.8.2.(1)(a) per fire compartment, where the liquids are stored
- where the storage is secondary to the principal activity,
- in industrial occupancies,
- in a general storage area covered in Subsection 3.2.3., and
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:
- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
    - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Article 4.1.5.8., which applies to the storage of Class I liquids in basements,
  - Subsections 4.2.8., 4.2.9. and 4.2.10., which apply to container storage in rooms or cabinets,
  - Subsection 4.3.1.1.3. which applies to tank storage in rooms, and
  - Sentence 4.2.1.1.(2), which applies to:
    - fuel-dispensing stations, bulk plants, refineries and distilleries,
    - liquids in motor or engine fuel tanks,
    - distilled beverage alcohol in closed containers when stored in conformance with Part 3, and
    - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
    - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

I1. To expand the application of Article 3.2.3.3. and clarify how it should apply to the incidental storage of liquids that are otherwise covered in this Article.
A1. Maximum height of storage of flammable liquids and combustible liquids shall be not more than that permitted for unprotected storage in Table 4.2.7.5.A.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent
I1. To expand the application of the storage height limitations in Table 4.2.7.5.A. for unprotected storage.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Maximum quantity per fire compartment of a single class of flammable liquid, combustible liquid or unstable liquid, where the liquid is stored:
- in industrial occupancies where the storage is secondary to the principal activity,
- in a general storage area covered in Subsection 3.2.3., and
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Article 4.1.2.8., which applies to the storage of Class I liquids in basements,
- Subsections 4.2.7., 4.2.9. and 4.2.10., which apply to container storage in rooms or cabinets,
- Subsection 4.3.1.3., which applies to tank storage in rooms, and
- Sentence 4.2.2.1.(2), which applies to fuel-dispensing stations, bulk plants, refineries and distilleries,
- distilled beverage alcohol in closed containers when stored in conformance with Part 3,
- food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
- products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

4) When a single class of liquid is stored, the total quantity in a single fire compartment shall be not more than:

a) 2 500 L of Class IB and IC liquids,
b) 5 000 L of Class II liquids, or
c) 10 000 L of Class IIIA liquids.

CodeText

I1. To limit the probability of the spread of a fire involving excessive quantities of liquids beyond the point of fire origin, which could lead to damage to the building.
Application and intent of Division B provisions

Application

A1. Maximum quantity per fire compartment of a single class of flammable liquid, combustible liquid or unstable liquid, where the liquid is stored:
- in industrial occupancies where the storage is secondary to the principal activity,
- in a general storage area covered in Subsection 3.2.3., and
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects.

5) When 2 or more classes of liquid are stored in the same fire compartment, the total quantity permitted for each class of liquid shall be calculated as follows:

\[ q/2500 + q/5000 + q_{III}/10,000 \leq 1 \]

where

- \( q_1 \) = the actual quantity of Class IB and IC liquids present,
- \( q_2 \) = the actual quantity of Class II liquids present,
- \( q_{III} \) = the actual quantity of Class IIIA liquids present.

Application

A1. Maximum quantity per fire compartment of more than one class of flammable liquid, combustible liquid or unstable liquid, where the liquid is stored

- in industrial occupancies where the storage is secondary to the principal activity,
- in a general storage area covered in Subsection 3.2.3., and
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:

- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Article 4.1.5.8., which applies to the storage of Class I liquids in basements,
  - Subsections 4.2.7., 4.2.9. and 4.2.10., which apply to container storage in rooms or cabinets,
  - Subsection 4.3.1.3., which applies to tank storage in rooms, and
  - Sentence 4.2.1.1.(2), which applies to:
    - fuel-dispensing stations, bulk plants, refineries and distilleries,
    - liquids in motor or engine fuel tanks,
    - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
    - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
    - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

11. To clarify what quantity limits apply to a storage situation for which there would otherwise be no applicable requirement in Sentence 4.2.8.4.(4).
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.2.8.4.(6)-01
Attribution - functional statement/objective Not applicable

CodeText

6) When 2 or more classes of liquid are stored in the same individual storage area, the maximum quantity permitted in the individual storage area shall be that permitted for the liquid with the lowest limit listed in Sentence (4).

Application

A1. Maximum size [quantity] and clearances of individual storage areas with more than one class of flammable liquid, combustible liquid or unstable liquid [per individual storage area], where the liquid is stored
- in industrial occupancies where the storage is secondary to the principal activity,
- in a general storage area covered in Subsection 3.2.3., and
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Article 4.1.5.B, which applies to the storage of Class I liquids in basements,
- Subsections 4.2.7., 4.2.9. and 4.2.10., which apply to container storage in rooms or cabinets,
- Subsection 4.3.1.3., which applies to tank storage in rooms, and
- Sentence 4.2.1.1.(2), which applies to:
  - fuel-dispensing stations; bulk plants, refineries and distilleries,
  - liquids in motor or engine fuel tanks,
  - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
  - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
  - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

H1. To clarify what quantity limits apply to a storage situation for which there would otherwise be no applicable requirement in Sentence 4.2.8.4.(4).
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Storage densities – averaged over the total room area [as stated in Table 4.2.9.1.] – of flammable liquids, combustible liquids and unstable liquids, where the liquids are stored
- in quantities in excess of those permitted in the open as stated in Sentences 4.2.5.3.(1), 4.2.7.4. (2), 4.2.8.2.(1) and 5.5.5.1.(2) and Clauses 4.2.4.2.(4)(b) and 4.2.6.2.(1)(b), and
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2,500 L.

A2. This also applies to pump rooms as stated in Sentence 4.5.9.2.(1).

Exception:
- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquefied hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.2.9.1.(2), which applies to storage rooms protected by automatic fire suppression systems,
- Sentence 4.2.9.1.(3), which applies to unprotected, fire separated storage rooms,
- Article 4.1.5.6., which applies to the storage of Class I liquids in basements, and
- Sentence 4.2.1.1.(2), which applies to:
  - fuel-dispensing stations, bulk plants, refineries and distilleries,
  - liquids in motor or engine fuel tanks,
  - distilled beverage alcohol in closed containers when stored in conformance with Part 3
  - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
  - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

I1. To limit the probability that a fire in stored products will spread beyond the point of fire origin, which could lead to damage to the building.
Application and intent of Division B provisions

Application

A1. Total quantities [as stated in Table 4.2.9.1.] of flammable liquids, combustible liquids and unstable liquids, where the liquids are stored
- in quantities in excess of those permitted in the open as stated in Sentences 4.2.5.3.(1), 4.2.7.4. (2), 4.2.8.2.(1) and 5.5.5.1.(2) and Clauses 4.2.4.2.(4)(b) and 4.2.6.2.(1)(b), and
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

A2. This also applies to pump rooms as stated in Sentence 4.5.9.2.(1).

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of the CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

- Sentence 4.2.9.1.(2), which applies to storage rooms protected by automatic fire suppression systems,
- Sentence 4.2.9.1.(3), which applies to unprotected, fire separated storage rooms,
- Article 4.1.5.6., which applies to the storage of Class I liquids in basements, and
- Sentence 4.2.1.1.(2), which applies to:
  - fuel-dispensing stations, bulk plants, refineries and distilleries,
  - liquids in motor or engine fuel tanks,
  - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
  - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
  - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

H1. To limit the probability that a fire involving stored liquids will spread beyond the storage area to other parts of the building, which could lead to damage to the building.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Storage densities – averaged over the total room area [as stated in Table 4.2.9.1.] – of flammable liquids, combustible liquids and unstable liquids, where the liquids are stored:
- in quantities in excess of those permitted in the open as stated in Sentences 4.2.5.3.(1), 4.2.7.4. (2), 4.2.8.2.(1) and 5.5.5.1.(2) and Clauses 4.2.4.2.(4)(b) and 4.2.6.2.(1)(b), and
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

A2. This also applies to pump rooms as stated in Sentence 4.5.9.2.(1).

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.2.9.1.(2), which applies to storage rooms protected by automatic fire suppression systems,
- Sentence 4.2.9.1.(3), which applies to unprotected, fire separated storage rooms,
- Article 4.1.5.8., which applies to the storage of Class I liquids in basements, and
- Sentence 4.2.1.1.(2), which applies to:
  - fuel-dispensing stations, bulk plants, refineries and distilleries,
  - liquids in motor or engine fuel tanks,
  - distilled beverage alcohol in closed containers when stored in conformance with Part 3
  - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
  - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent
1. To limit the probability that a fire involving the stored products will spread beyond the point of fire origin, which could lead to harm to persons.
Application and intent of Division B provisions
Alberta Fire Code 2006

A1. Total quantities [as stated in Table 4.2.9.1.] of flammable liquids, combustible liquids and unstable liquids, where the liquids are stored-
- in quantities in excess of those permitted in the open as stated in Sentences 4.2.5.3.(1), 4.2.7.4.(2), 4.2.8.2.(1) and 5.5.5.1.(2) and Clauses 4.2.4.2.(4)(b) and 4.2.6.2.(1)(b), and
- in containers conforming to Clauses 4.2.3.1.(1)(a) and 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

A2. This also applies to pump rooms as stated in Sentence 4.5.9.2.(1)

Exception:
- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the ‘Transportation of Dangerous Goods Regulations’,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the monitoring, storage, or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Sentence 4.2.9.1.(2), which applies to storage rooms protected by automatic fire suppression systems,
  - Sentence 4.2.9.1.(3), which applies to unprotected, fire separated storage rooms,
  - Article 4.1.5.B., which applies to the storage of Class I liquids in basements, and
  - Sentence 4.2.1.1.(2), which applies to:
    - fuel-dispensing stations, bulk plants, refineries and distilleries,
    - liquids in motor or engine fuel tanks,
    - distilled beverage alcohol in closed containers when stored in conformance with Part 3
    - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
    - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

I1. To limit the probability that a fire involving stored liquids will spread beyond the storage area to other parts of the building, which could lead to harm to persons.

CodeReference (including record number) 4.2.9.1.(1)-04
Attribution - functional statement/objective F02-OS1.2

CodeText

1) Except as provided in Sentences (2) and (3), where flammable liquids and combustible liquids are stored in a room required in this Part, the storage densities averaged over the total room area and the total quantities of such liquids shall conform to Table 4.2.9.1.
A1. Fire-resistance ratings of fire separations [as stated in Table 4.2.9.1.] for rooms used for the storage of flammable liquids, combustible liquids and unstable liquids, where the liquids are stored - in quantities in excess of those permitted in the open as stated in Sentences 4.2.5.3.(1), 4.2.7.4. (2), 4.2.8.2.(1) and 5.5.5.1.(2) and Clauses 4.2.4.2.(4)(b) and 4.2.6.2.(1)(b), and - in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

A2. This also applies to pump rooms as stated in Sentence 4.5.9.2.(1).

Exception:
except as stated in - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants, - Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”, - appliances and their ancillary equipment within the scope of CAN/CSA-B139, - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects, - the storage of aerosol products covered under Subsection 3.2.5., - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act, - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act, - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55, - Sentence 4.2.9.1.(2), which applies to storage rooms protected by automatic fire suppression systems, - Sentence 4.2.9.1.(3), which applies to unprotected, fire separated storage rooms, - Article 4.1.5.8., which applies to the storage of Class I liquids in basements, and - Sentence 4.2.1.1.(2), which applies to: - fuel-dispensing stations, bulk plants, refineries and distilleries, - liquids in motor or engine fuel tanks, - distilled beverage alcohol in closed containers when stored in conformance with Part 3. - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids (with the remainder of the solution being non-flammable), when in closed containers having a capacity of not more than 5 L.

I1. To limit the probability that a fire involving the stored products will spread to other parts of the building, which could lead to damage to the building.

I2. To limit the probability that activities in other parts of the building will lead to a fire exposure hazard to the stored products, which could lead to damage to the building.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Fire-resistance ratings of fire separations [as stated in Table 4.2.9.1.] for rooms used for the storage of flammable liquids, combustible liquids and unstable liquids, where the liquids are stored:
- in quantities in excess of those permitted in the open as stated in Sentences 4.2.5.3.(1), 4.2.7.4. (2), 4.2.8.2.(1) and 5.5.5.1.(2) and Clauses 4.2.4.2.(4)(b) and 4.2.6.2.(1)(b), and
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

A2. This also applies to pump rooms as stated in Sentence 4.5.9.2.(1)

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
- the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.2.9.1.(2), which applies to storage rooms protected by automatic fire suppression systems,
- Sentence 4.2.9.1.(3), which applies to unprotected, fire separated storage rooms,
- Article 4.1.5.8., which applies to the storage of Class I liquids in basements, and
- Sentence 4.2.1.1.(2), which applies to:
- fuel-dispensing stations, bulk plants, refineries and distilleries,
- liquids in motor or engine fuel tanks,
- distilled beverage alcohol in closed containers when stored in conformance with Part 3,
- food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
- products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Application

I1. To limit the probability that a fire involving stored products will spread to other parts of the building, which could lead to harm to persons, including emergency responders.

I2. To limit the probability that activities in other parts of the building will lead to a fire exposure hazard to the stored products, which could lead to harm to persons, including emergency responders.
Application and intent of Division B provisions

Alberta Fire Code 2006

**Application**

A1. Rooms for the storage and dispensing of flammable liquids, combustible liquids and unstable liquids, where the liquids are stored:
- in quantities in excess of those permitted in the open as stated in Sentences 4.2.5.3.(1), 4.2.7.4.(2), 4.2.8.2.(1) and 5.5.5.1.(2), and Clauses 4.2.4.2.(4)(b) and 4.2.6.2.(1)(b), and
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2,500 L.

A2. This also applies to pump rooms, as stated in Sentence 4.5.9.2.(1).

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Article 4.1.5.8., which applies to the storage of Class I liquids in basements, and
- Sentence 4.2.1.1.(2), which applies to:
  - fuel-dispensing stations, bulk plants, refineries and distilleries,
  - liquids in motor or engine fuel tanks,
  - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
  - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
  - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

**Intent**

I1. To state the application of Subsection 4.2.9.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Storage densities and total quantities [as stated in Table 4.2.9.1.] – in rooms protected with an automatic fire suppression system – for the storage and dispensing of flammable liquids, combustible liquids and unstable liquids, where the liquids are stored:
- in quantities in excess of those permitted in the open as stated in Sentences 4.2.5.3.(1), 4.2.7.4.2), 4.2.8.2.(1) and 5.5.5.1.(2) and Clauses 4.2.4.2.(4)(b) and 4.2.6.2.(1)(b), and
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

A2. This also applies to pump rooms as stated in Sentence 4.5.9.2.(1).

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
- the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- solid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Article 4.1.5.8., which applies to the storage of Class I liquids in basements, and
- Sentence 4.2.1.1.(2), which applies to:
  - fuel-dispensing stations, bulk plants, refineries and distilleries,
  - liquids in motor or engine fuel tanks,
  - distilled beverage alcohol in closed containers when stored in conformance with Part 3, food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
  - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

I1. To limit the probability that a fire involving stored liquids will spread beyond the point of fire origin to other parts of the building, which could lead to damage to the building.

I2. To require the storage room to be protected with an automatic fire suppression system when liquid quantities are increased.

CodeReference (including record number) 4.2.9.1.(2)-01
Attribution - functional statement/objective F02-OP1.2
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Storage densities and total quantities [as stated in Table 4.2.9.1.] – in rooms protected with an automatic fire suppression system – for the storage and dispensing of flammable liquids, combustible liquids and unstable liquids, where the liquids are stored:
- in quantities in excess of those permitted in the open as stated in Sentences 4.2.5.3.(1), 4.2.7.4. (2), 4.2.8.2.(1) and 5.5.5.1.(2) and Clauses 4.2.4.2.(4)(b) and 4.2.6.2.(1)(b), and
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

A2. This also applies to pump rooms as stated in Sentence 4.5.9.2.(1).

Exception:
- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Article 4.1.5.8., which applies to the storage of Class I liquids in basements, and
  - Sentence 4.2.1.1.(2), which applies to:
    - fuel-dispensing stations, bulk plants, refineries and distilleries,
    - liquids in motor or engine fuel tanks,
    - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
    - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
    - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

I1. To limit the probability that a fire involving stored liquids will spread beyond the point of fire origin to other parts of the building, which could lead to harm to persons, including emergency responders.

I2. To require the storage room to be protected with an automatic fire suppression system when liquid quantities are increased.
Application

A1. Automatic fire suppression systems in rooms used for the storage and dispensing of flammable liquids, combustible liquids and unstable liquids, where the liquids are stored:
- in quantities in excess of those permitted in the open as stated in Sentences 4.2.5.3.(1), 4.2.7.4. (2), 4.2.8.2.(1) and 5.5.5.1.(2) and Clauses 4.2.4.2.(4)(b) and 4.2.6.2.(1)(b), and
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

A2. This also applies to pump rooms as stated in Sentence 4.5.9.2.(1).

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Article 4.1.5.8., which applies to the storage of Class I liquids in basements, and
- Sentence 4.2.1.1.(2), which applies to:
  - fuel-dispensing stations, bulk plants, refineries and distilleries,
  - liquids in motor or engine fuel tanks,
  - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
  - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
  - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Maximum quantities (as stated in Table 4.2.9.1.) of Class I liquids stored in an unprotected storage room with a fire separation having a fire-resistance rating of not less than 2 h shall:

a) not exceed those specified for unprotected storage in Table 4.2.7.5.A., and

b) comply with Sentences 4.2.7.5.(3) and (4).

Application

A1. Maximum quantities [as stated in Table 4.2.9.1.] of Class I liquids stored in an unprotected storage room with a fire separation having a fire-resistance rating of not less than 2 h, where the liquids are stored:

- in quantities in excess of those permitted in the open as stated in Sentences 4.2.5.3.(1), 4.2.7.4. (2), 4.2.8.2.(1) and 5.5.5.1.(2) and Clauses 4.2.4.2.(4)(b) and 4.2.6.2.(1)(b), and

- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have a capacity of not more than 2 500 L.

Exception:

- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Article 4.1.5.8., which applies to the storage of Class I liquids in basements, and
  - Sentence 4.2.1.1.(2), which applies to:
    - fuel-dispensing stations, bulk plants, refineries and distilleries,
    - liquids in motor or engine fuel tanks,
    - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
    - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L., and
    - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

I1. To supersede the total quantity limits in Table 4.2.9.1. [referenced in Sentence 4.2.9.1.(1)] and reduce the maximum quantity levels to those permitted in Table 4.2.7.5.A. for a comparable storage situation.

I2. To expand the application of Sentences 4.2.7.5.(1), 4.2.7.5.(3) and 4.2.7.5.(4).
Application and intent of Division B provisions

Application

A1. Wall-to-floor joints of rooms used for the storage and dispensing of flammable liquids, combustible liquids and unstable liquids, where the liquids are stored:
- in quantities in excess of those permitted in the open as stated in Sentences 4.2.5.3.(1), 4.2.7.4.(2), 4.2.8.2.(1) and 5.5.5.1.(2) and Clauses 4.2.4.2.(4)(b) and 4.2.6.2.(1)(b), and
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

A2. This also applies to pump rooms as stated in Sentence 4.5.9.2.(1).

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Article 4.1.5.8., which applies to the storage of Class I liquids in basements, and
- Sentence 4.2.1.1.(2), which applies to:
  - fuel-dispensing stations, bulk plants, refineries and distilleries,
  - liquids in motor or engine fuel tanks,
  - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
  - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
  - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent
H. To limit the probability of the escape of liquids through joints, which could lead to harm to the public.
Application and intent of Division B provisions

Application

A1. Wall-to-floor joints of rooms used for the storage and dispensing of flammable liquids, combustible liquids and unstable liquids, where the liquids are stored:

- in quantities in excess of those permitted in the open as stated in Sentences 4.2.5.3.(1), 4.2.7.4.(2), 4.2.8.2.(1) and 5.5.5.1.(2) and Clauses 4.2.4.2.(4)(b) and 4.2.6.2.(1)(b), and
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

A2. This also applies to pump rooms as stated in Sentence 4.5.9.2.(1).

Exception:

- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

F44-OP1.2

1) Storage rooms referred to in Article 4.2.9.1. shall be liquid-tight where the walls join the floor.

Intent

I1. To limit the probability of the escape of liquids through joints, which could lead to a fire hazard and the spread of fire outside of the storage room, which could lead to damage to the building.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application of Division B provisions

A1. Wall-to-floor joints of rooms used for the storage and dispensing of flammable liquids, combustible liquids and unstable liquids, where the liquids are stored

- in quantities in excess of those permitted in the open as stated in Sentences 4.2.5.3.(1), 4.2.7.4.(2), 4.2.8.2.(1) and 5.5.5.1.(2) and Clauses 4.2.4.2.(4)(b) and 4.2.6.2.(1)(b), and
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

A2. This also applies to pump rooms as stated in Sentence 4.5.9.2.(1).

Exception:

- except as stated in

  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of the CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Article 4.1.5.8., which applies to the storage of Class I liquids in basements, and
  - Sentence 4.2.1.1.(2), which applies to:
    - fuel-dispensing stations, bulk plants, refineries and distilleries,
    - liquids in motor or engine fuel tanks,
    - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
    - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
    - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

II. To limit the probability of the escape of liquids through joints, which could lead to a fire hazard outside of the storage room, which could lead to harm to persons in other parts of the building.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Minimum aisle widths in rooms used for the storage and dispensing of flammable liquids, combustible liquids and unstable liquids, where the liquids are stored

- in quantities in excess of those permitted in the open as stated in Sentences 4.2.5.3.(1), 4.2.7.4.(2), 4.2.8.2.(1) and 5.5.5.1.(2) and Clauses 4.2.4.2.(4)(b) and 4.2.6.2.(1)(b), and
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

A2. This also applies to pump rooms as stated in Sentence 4.5.9.2.(1).

Exception:

except as stated in

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Article 4.1.5.6., which applies to the storage of Class I liquids in basements, and
- Sentence 4.2.1.1.(2), which applies to:
  - fuel-dispensing stations, bulk plants, refineries and distilleries,
  - liquids in motor or engine fuel tanks,
  - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
  - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
  - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

I1. To limit the probability of delays or ineffectiveness in conducting manual firefighting operations, which could lead to the spread of fire beyond the point of fire origin, which could lead to damage to the building.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Minimum aisle widths in rooms used for the storage and dispensing of flammable liquids, combustible liquids and unstable liquids, where the liquids are stored-
- in quantities in excess of those permitted in the open as stated in Sentences 4.2.5.3.(1), 4.2.7.4.(2), 4.2.8.2.(1) and 5.5.5.1.(2) and Clauses 4.2.4.2.(4)(b) and 4.2.6.2.(1)(b), and
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

A2. This also applies to pump rooms as stated in Sentence 4.5.9.2.(1).

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Article 4.1.5.B., which applies to the storage of Class I liquids in basements, and
- Sentence 4.2.1.1.(2), which applies to:
  - fuel-dispensing stations, bulk plants, refineries and distilleries,
  - liquids in motor or engine fuel tanks,
  - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
  - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
  - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

I1. To limit the probability of accidental damage to containers, which could lead to the unwanted release of contents, which could lead to a fire hazard, which could lead to harm to persons.
I2. To limit the probability that a leak from a container will remain unnoticed, which could lead to a fire hazard, which could lead to harm to persons.
I3. To limit the probability of delays or ineffectiveness in conducting manual firefighting operations, which could lead to the spread of fire beyond the point of fire origin, which could lead to harm to persons, including emergency responders.
I4. To limit the probability that egress from the room will become impeded, which could lead to delays in evacuation and emergency response, which could lead to harm to persons, including emergency responders.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Dispensing [transfer] from containers having a capacity of more than 30 L in rooms used for the storage and dispensing of flammable liquids, combustible liquids and unstable liquids, where the liquids are stored
- in quantities in excess of those permitted in the open as stated in Sentences 4.2.5.3.(1), 4.2.7.4. (2), 4.2.8.2.(1) and 5.5.5.1.(2) and Clauses 4.2.4.2.(4)(b) and 4.2.6.2.(1)(b), and
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

A2. This also applies to pump rooms as stated in Sentence 4.5.9.2.(1).

Exception:
- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”.
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Article 4.1.5.B., which applies to the storage of Class I liquids in basements, and
  - Sentence 4.2.1.1.(2), which applies to:
    - fuel-dispensing stations, bulk plants, refineries and distilleries,
    - liquids in motor or engine fuel tanks,
    - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
    - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
    - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

I1. To limit the probability of the unnecessary release of flammable vapours or the accidental escape of flammable liquids, which could lead to a fire or explosion hazard in the presence of an ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Explosion venting where Class IA or IB liquids are dispensed in rooms used for the storage and dispensing of flammable liquids, combustible liquids and unstable liquids, where the liquids are stored

- in quantities in excess of those permitted in the open as stated in Sentences 4.2.5.3.(1), 4.2.7.4.(2), 4.2.8.2.(1) and 5.5.5.1.(2) and Clauses 4.2.4.2.(4)(b) and 4.2.6.2.(1)(b), and
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(d) that have a capacity of not more than 2 500 L.

A2. This also applies to pump rooms as stated in Sentence 4.5.9.2.(1).

Exception: except as stated in

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Article 4.1.5.8., which applies to the storage of Class I liquids in basements, and
- Sentence 4.2.1.1.(2), which applies to
  - fuel-dispensing stations, bulk plants, refineries and distilleries,
  - liquids in motor or engine fuel tanks,
  - distilled beverage alcohol in closed containers when stored in conformance with Part 3, food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
  - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

I1. To limit the probability that deflagration in a room will lead to critical structural and mechanical damage to a building.
Application and intent of Division B provisions

CodeText
1) Flammable liquids and combustible liquids stored in cabinets required in this Part shall be in closed containers conforming to Article 4.2.3.1.

Application

A1. Closed containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or closed portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L, in cabinets used for the indoor storage of flammable liquids, combustible liquids and unstable liquids, where the liquids are stored in quantities in excess of those permitted in the open, as stated in Sentences 4.2.8.2.(1) and 5.5.5.1.(2) and Clauses 4.2.4.2.(4)(b) and 4.2.6.2.(1)(b).

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
- the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Article 4.1.5.8., which applies to basement storage,
- Sentence 4.2.1.1.(2), which applies to:
  - bulk plants, refineries and distilleries,
  - liquids in motor or engine fuel tanks,
  - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
  - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
  - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent
I1. To direct Alberta Fire Code 2006 users to Article 4.2.3.1.
A1. Maximum individual capacity of cabinets used for the indoor storage of flammable liquids, combustible liquids and unstable liquids, where the liquids are stored
- in quantities in excess of those permitted in the open as stated in Sentences 4.2.8.2.(1) and 5.5.5.1.(2) and Clauses 4.2.6.2.(1)(b), and
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Article 4.1.5.8., which applies to basement storage,
- Sentence 4.2.1.1.(2), which applies to: bulk plants, refineries and distilleries,
- distilled beverage alcohol in closed containers when stored in conformance with Part 3,
- food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
- products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent
I1. To limit the probability that a fire will involve excessive quantities of liquids, which could lead to the spread of liquids outside of cabinets, which could lead to a fire or explosion, which could lead to damage to the building.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Maximum individual capacity of cabinets used for the indoor storage of flammable liquids, combustible liquids and unstable liquids, where the liquids are stored

- in quantities in excess of those permitted in the open as stated in Sentences 4.2.8.2.(1) and 5.5.5.1.(2) and Clauses 4.2.6.2.(1)(b), and
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:

- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Article 4.1.5.8., which applies to basement storage,
- Sentence 4.2.1.1.(2), which applies to:
  - bulk plants, refineries and distilleries,
  - liquids in motor or engine fuel tanks,
  - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
  - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
  - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

H1. To limit the probability that a fire will involve excessive quantities of liquids, which could lead to the spread of liquids outside of cabinets, which could lead to a fire or explosion, which could lead to harm to persons.
Application and intent of Division B provisions
Alberta Fire Code 2006

A1. Maximum total [aggregate] capacity – in a single fire compartment – of cabinets used for the indoor storage of flammable liquids, combustible liquids and unstable liquids, where the liquids are stored:
- in quantities in excess of those permitted in the open as stated in Sentences 4.2.8.2.(1) and 5.5.5.1.(2) and Clauses 4.2.4.2.(4)(b) and 4.2.6.2.(1)(b), and
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:
- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
    - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Article 4.1.5.8., which applies to basement storage,
  - Sentence 4.2.10.3.(2), which applies to industrial occupancies,
  - Sentence 4.2.10.3.(3) and Clause 4.2.6.2.(1)(a), which apply to care or detention occupancies,
  - Sentence 5.5.5.1.(2), which applies to laboratories,
  - Clause 4.2.4.2.(4)(a), which applies to assembly or residential occupancies,
  - Clause 4.2.6.2.(1)(a), which applies to business and personal services occupancies and care or detention occupancies, and
  - Sentence 4.2.1.1.(2), which applies to:
    - bulk plants, refineries and distilleries,
    - liquids in motor or engine fuel tanks,
    - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
    - food and pharmaceutical products when in closed containers having a capacity of not more than 3 L. and
    - products containing not more than 50% by volume of watermiscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent
H1. To limit the probability that a fire involving the stored liquids will spread to other parts of the building, which could lead to damage to the building.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

CodeReference (including record number) 4.2.10.3.(1)-02
Attribution - functional statement/objective F02-O5-1.2

CodeText

1) Except as provided in Sentences (2) and (3), the total quantity of flammable liquids and combustible liquids stored in cabinets in a single fire compartment shall not exceed the quantity permitted in Article 4.2.10.2. for 3 cabinets.

Application

A1. Maximum total [aggregate] capacity – in a single fire compartment – of cabinets used for the indoor storage of flammable liquids, combustible liquids and unstable liquids, where the liquids are stored:

- in quantities in excess of those permitted in the open as stated in Sentences 4.2.8.2.(1) and 5.5.5.1.(2) and Clauses 4.2.4.2.(4)(b) and 4.2.6.2.(1)(b), and
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to:
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Article 4.1.5.5., which applies to basement storage,
- Sentence 4.2.10.3.(2), which applies to industrial occupancies,
- Sentence 4.2.10.3.(3) and Clause 4.2.6.2.(1)(a), which apply to care or detention occupancies,
- Sentence 5.5.5.1.(2), which applies to laboratories,
- Clause 4.2.4.2.(4)(a), which applies to assembly or residential occupancies,
- Clause 4.2.6.2.(1)(a), which applies to business and personal services occupancies and care or detention occupancies, and
- Sentence 4.2.1.1.(2), which applies to:
  - bulk plants, refineries and distilleries,
  - liquids in motor or engine fuel tanks,
  - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
  - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
  - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

I. To limit the probability that a fire involving the stored liquids will spread to other parts of the building, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Maximum total [aggregate] capacity – in a single fire compartment – of cabinets used for the indoor storage of flammable liquids, combustible liquids and unstable liquids, where the liquids are stored in industrial occupancies:

- in quantities in excess of those permitted in the open as stated in Sentences 4.2.8.2.(1) and 5.5.5.1.(2), and
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2,500 L.

Exception:

except as stated in:

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to:
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Article 4.1.5.8., which applies to basement storage,
- Sentence 4.2.1.1.(2), which applies to:
  - bulk plants, refineries and distilleries,
  - liquids in motor or engine fuel tanks,
  - distilled beverage alcohol in closed containers when stored in conformance with Part 3.
- food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
- products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

H. To waive the total capacity limits in Sentence 4.2.10.3.(1) if measures are taken to limit the probability that a fire involving the maximum quantities of liquids in cabinets [as stated in Sentence 4.2.10.3.(1)] will spread and involve liquids in the other [additional] cabinets within the same fire compartment.

This is to limit the probability that a fire involving the stored liquids will spread to other parts of the building, which could lead to damage to the building.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

A1. Maximum total [aggregate] capacity – in a single fire compartment – of cabinets used for the indoor storage of flammable liquids, combustible liquids and unstable liquids, where the liquids are stored in industrial occupancies - in quantities in excess of those permitted in the open as stated in Sentences 4.2.8.2.(1) and 5.5.5.1.(2), and - in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:
- except as stated in - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants, - Sentence 4.1.1.1.(3), which applies to - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations", - appliances and their ancillary equipment within the scope of CAN/CSA-B139, - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects, - the storage of aerosol products covered under Subsection 3.2.5., - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act, - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act, - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55, - Article 4.1.5.8., which applies to basement storage, - Sentence 4.2.1.1.(2), which applies to - bulk plants, refineries and distilleries, - liquids in motor or engine fuel tanks, - distilled beverage alcohol in closed containers when stored in conformance with Part 3, - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent
I1. To waive the total capacity limits in Sentence 4.2.10.3.(1) if measures are taken to limit the probability that a fire involving the maximum quantities of liquids in cabinets [as stated in Sentence 4.2.10.3.(1)] will spread and involve liquids in the other [additional] cabinets within the same fire compartment. This is to limit the probability that a fire involving the stored liquids will spread to other parts of the building, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Maximum total [aggregate] capacity – in a single fire compartment – of cabinets used for the indoor storage of flammable liquids, combustible liquids and unstable liquids, where the liquids are stored in care or detention occupancies - in quantities in excess of those permitted in the open as stated in Clause 4.2.6.2.(1)(b), and - in containers conforming to Clauses 4.2.3.1.(1)(b) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:
except as stated in
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Article 4.1.5.8., which applies to basement storage,
- Sentence 5.5.5.1.(2), which applies to laboratories,
- Clause 4.2.6.2.(1)(a), which applies to business and personal services occupancies and care or detention occupancies, and
- Sentence 4.2.1.1.(2), which applies to:
  - bulk plants, refineries and distilleries,
  - liquids in motor or engine fuel tanks,
  - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
  - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
  - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent
I1. To override the permission in Sentence 4.2.10.3.(1) that allows 3 such cabinets per fire compartment, in order to limit flammable and combustible contents [fire loading].

This is to limit the probability that a fire involving the stored liquids will spread to other parts of the building, which could lead to damage to the building.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeText

A1. Maximum total [aggregate] capacity – in a single fire compartment – of cabinets used for the indoor storage of flammable liquids, combustible liquids and unstable liquids, where the liquids are stored in care or detention occupancies - in quantities in excess of those permitted in the open as stated in Clause 4.2.6.2.(1)(b), and - in containers conforming to Clauses 4.2.3.1.(1)(b) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2,500 L.

Exception:
except as stated in
- Sentence 4.1.1.1.(3), which applies to
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Article 4.1.5.8., which applies to basement storage,
- Sentence 5.5.5.1.(2), which applies to laboratories,
- Clause 4.2.6.2.(1)(a), which applies to business and personal services occupancies and care or detention occupancies, and
- Sentence 4.2.1.1.1.(2), which applies to
- bulk plants, refineries and distilleries,
- liquids in motor or engine fuel tanks,
- distilled beverage alcohol in closed containers when stored in conformance with Part 3,
- food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
- products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

I1. To override the permission in Sentence 4.2.10.3.(1) that allows 3 such cabinets per fire compartment, in order to limit flammable and combustible contents [fire loading].

This is to limit the probability that a fire involving the stored liquids will spread to other parts of the building, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Cabinet signs indicating the need to keep ignition sources away from cabinets used for the indoor storage of flammable liquids, combustible liquids and unstable liquids, where the liquids are stored:
- in quantities in excess of those permitted in the open as stated in Sentences 4.2.8.2.(1) and 5.5.5.1.(2) and Clauses 4.2.4.2.(4)(b) and 4.2.6.2.(1)(b), and
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(d) that have an individual capacity of not more than 2500 L.

Exception:
- except as stated in:
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to:
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Article 4.1.5.8., which applies to basement storage,
- Sentence 4.2.1.1.(2), which applies to:
  - bulk plants, refineries and distilleries,
  - liquids in motor or engine fuel tanks,
  - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
  - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
  - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

I1. To limit the probability of vapour ignition, which could lead to a fire or explosion, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.2.10.5.(1)-01
Attribution - functional statement/objective F01-051.1

CodeText

1) Storage cabinets required in this Part shall conform to ULC/ORD-C1275, “Storage Cabinets for Flammable Liquid Containers.”

Application

A1. Construction [spark-proof] of cabinets used for the indoor storage of flammable liquids, combustible liquids and unstable liquids, where the liquids are stored - in quantities in excess of those permitted in the open as stated in Sentences 4.2.8.2.(1) and 5.5.5.1.(2) and Clauses 4.2.4.2.(4)(b) and 4.2.6.2.(1)(b), and - in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:
except as stated in - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants, - Sentence 4.1.1.1.(3), which applies to - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”, - appliances and their ancillary equipment within the scope of CAN/CSA-B139, - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects, - the storage of aerosol products covered under Subsection 3.2.5., - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act, - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act, - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55, - Article 4.1.5.B., which applies to basement storage, - Sentence 4.2.1.1.(2), which applies to: - bulk plants, refineries and distilleries, - liquids in motor or engine fuel tanks, - distilled beverage alcohol in closed containers when stored in conformance with Part 3, - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L; and - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids (with the remainder of the solution being non-flammable), when in closed containers having a capacity of not more than 5 L.

Intent
H. To limit the probability of vapour ignition, which could lead to a fire or explosion, which could lead to harm to persons nearby.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Construction [fire endurance] of cabinets used for the indoor storage of flammable liquids, combustible liquids and unstable liquids, where the liquids are stored
- in quantities in excess of those permitted in the open as stated in Sentences 4.2.8.2.(1) and 5.5.5.1.(2) and Clauses 4.2.4.2.(4)(b) and 4.2.6.2.(1)(b), and
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:
- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Article 4.1.5.B., which applies to basement storage,
  - Sentence 4.2.1.1.(2), which applies to:
    - bulk plants, refineries and distilleries,
    - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
    - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent
- To limit the probability that liquids stored in cabinets will become involved in a fire originating outside of the cabinets, which could lead to the spread of fire beyond the point of origin, which could lead to damage to the building.
Application and intent of Division B provisions

Alberta Fire Code 2006

1) Storage cabinets required in this Part shall conform to ULC/ORD-C1275, “Storage Cabinets for Flammable Liquid Containers.”

Application

A1. Construction [fire endurance] of cabinets used for the indoor storage of flammable liquids, combustible liquids and unstable liquids, where the liquids are stored
- in quantities in excess of those permitted in the open as stated in Sentences 4.2.8.2.(1) and 5.5.5.1.(2) and Clauses 4.2.4.2.(4)(b) and 4.2.6.2.(1)(b), and
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:
- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”;
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
    - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Article 4.1.5.8., which applies to basement storage,
  - Sentence 4.2.1.1.(2), which applies to:
    - bulk plants, refineries and distilleries,
    - liquids in motor or engine fuel tanks,
    - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
    - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
    - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

H1. To limit the probability that liquids stored in cabinets will be involved in a fire originating outside of the cabinets, which could lead to the spread of fire beyond the point of origin, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

1) Storage cabinets required in this Part shall conform to ULC/ORD-C1275, “Storage Cabinets for Flammable Liquid Containers.”

Application

A1. Construction [spill containment] of cabinets used for the indoor storage of flammable liquids, combustible liquids and unstable liquids, where the liquids are stored
- in quantities in excess of those permitted in the open as stated in Sentences 4.2.8.2.(1) and 5.5.5.1.(2) and Clauses 4.2.6.2.(4)(b) and 4.2.6.2.(4)(b), and
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:
- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
    - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Article 4.1.5.8., which applies to basement storage,
  - Sentence 4.2.1.1.(2), which applies to:
    - bulk plants, refineries and distilleries,
    - liquids in motor or engine fuel tanks,
    - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
    - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
    - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

1. To limit the probability of the spread of an unwanted release of liquid in cabinets to adjacent areas, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

4.2.10.5.(1)-05

A1. Construction [spill containment] of cabinets used for the indoor storage of flammable liquids, combustible liquids and unstable liquids, where the liquids are stored:
- in quantities in excess of those permitted in the open as stated in Sentences 4.2.8.2.(1) and 5.5.5.1.(2) and Clauses 4.2.6.2.(1)(b), and
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Article 4.1.5.8., which applies to basement storage,
- Sentence 4.2.1.1.(2), which applies to:
  - bulk plants, refineries and distilleries,
  - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
  - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

I1. To limit the probability of the spread of an unwanted release of liquid in cabinets to adjacent areas, which could lead to a fire hazard, which could lead to damage to the building.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Construction [spill containment] of cabinets used for the indoor storage of flammable liquids, combustible liquids and unstable liquids, where the liquids are stored

- in quantities in excess of those permitted in the open as stated in Sentences 4.2.8.2.(1) and 5.5.5.1.(2) and Clauses 4.2.6.2.(1)(b) and (4)(b), and
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:
- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Article 4.1.5.8., which applies to basement storage,
  - Sentence 4.2.1.1.(2), which applies to:
- bulk plants, refineries and distilleries,
- food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
- products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent
- To limit the probability of the spread of an unwanted release of liquid in cabinets to adjacent areas, which could lead to a fire hazard, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Fire protection of vent piping and ventilation openings of cabinets used for the indoor storage of flammable liquids, combustible liquids and unstable liquids, where the liquids are stored:

- in quantities in excess of those permitted in the open as stated in Sentences 4.2.5.1.(5), 4.2.5.3.1., 4.2.7.4.(2), 4.2.8.2.(1) and 5.5.5.1.(2) and Clauses 4.2.4.2.(4)(b) and 4.2.6.2.(1)(b), and
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:

- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Article 4.1.5.8., which applies to basement storage,
- Sentence 4.2.1.1.(2), which applies to:
  - bulk plants, refineries and distilleries,
  - liquids in motor or engine fuel tanks,
  - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
  - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
- products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

I1. To limit the probability that a fire in the vicinity of the storage cabinet or the ventilation system could ignite flammable vapours in, or leaking out of, the ventilation system, which could lead to a fire or explosion, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Exhaust ventilation to outdoors of cabinets used for the indoor storage of flammable liquids, combustible liquids and unstable liquids, where the liquids are stored:
- in quantities in excess of those permitted in the open as stated in Sentences 4.2.5.1.(5), 4.2.5.3.(1), 4.2.7.4.(2), 4.2.8.2.(1) and 5.5.5.1.(2) and Clauses 4.2.4.2.(4)(b) and 4.2.6.2.(1)(b), and
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have a capacity of not more than 2 500 L.

Exception:
- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Article 4.1.5.8., which applies to basement storage,
  - Sentence 4.2.1.1.(2), which applies to:
    - bulk plants, refineries and distilleries,
    - liquids in motor or engine fuel tanks,
    - distilled beverage alcohol in closed containers when stored in conformance with Part 3.
    - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
    - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids (with the remainder of the solution being non-flammable), when in closed containers having a capacity of not more than 5 L.

Application

F01-OS1.1 Attribution - functional statement/objective

4.2.10.6.(1)-02 CodeReference (including record number)

1) When a storage cabinet required in this Part is provided with ventilation openings, a) the ventilation openings shall be sealed with materials providing a fire protection at least equivalent to that required for the construction of the cabinet, or b) the cabinet shall be vented outdoors using vent piping providing a fire protection at least equivalent to that required in Clause (a) for seals.

I1. To limit the probability that ignitable concentrations of vapours generated inside cabinets will come in contact with external sources of ignition (outside the cabinets), which could lead to a fire or explosion, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Quantities [sizes] per pile – and the clearances around piles [as stated in Table 4.2.11.1.] – of flammable liquids, combustible liquids and unstable liquids, where the liquids are stored:

- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L, and
- in outdoor areas.

Exception: except as stated in:

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to:
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.2.11.1.(2), which applies to clearances to liquid storage buildings,
- Sentence 4.7.2.4.(2), which applies to bulk plants when container storage does not present a hazard to neighbouring properties, and
- Sentence 4.2.1.1.(2), which applies to:
  - bulk plants, refineries and distilleries,
  - liquids in motor or engine fuel tanks,
  - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
  - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
  - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

11. To limit the probability that a fire in the outdoor stored products will spread to other piles and to adjacent buildings, which could lead to damage to adjacent buildings or facilities.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Quantities [sizes] per pile – and the clearances around piles [as stated in Table 4.2.11.1.] – of flammable liquids, combustible liquids and unstable liquids, where the liquids are stored
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L, and
- in outdoor areas.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.2.11.1.(2), which applies to clearances to liquid storage buildings,
- Sentence 4.7.2.4.(2), which applies to bulk plants when container storage does not present a hazard to neighbouring properties, and
- Sentence 4.7.2.1.1.(2), which applies to:
  - bulk plants, refineries and distilleries,
  - liquids in motor or engine fuel tanks,
  - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
  - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
  - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent
I1. To limit the probability that a fire in the outdoor stored products will spread to other piles or to adjacent buildings, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference: 4.2.11.1.(2)-01
Attribution - functional statement/objective: F03.F02-OP3.1

CodeText

2) The clearances required in Sentence (1) do not apply where not more than 5 000 L of flammable liquids or combustible liquids are stored adjacent to a building on the same property, provided that either
a) the building is limited to 1 storey in building height and is used primarily for the storage or handling of flammable liquids or combustible liquids, or
b) the exposed wall has a fire-resistance rating of at least 2 h and has no openings within 3 m of such outdoor storage.

Application

A1. Clearances to buildings on the same property – or the clearances to property lines [as stated in Table 4.2.11.1.] – of piles of flammable liquids, combustible liquids and unstable liquids
- where the liquids are stored in outdoor areas,
- where the liquids are stored in aggregate quantities of not more than 5 000 L,
- where the liquids are stored in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L, and
- where the building is limited to 1 storey in building height and is used primarily for the storage or handling of flammable liquids, combustible liquids or unstable liquids, or the exposed wall of the building has a fire-resistance rating of at least 2 h and has no openings within 3 m of the outdoor storage.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.2.11.1.(2), which applies to:
  - bulk plants, refineries and distilleries,
  - liquids in motor or engine fuel tanks,
  - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
  - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
  - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

I1. To waive the clearances [to buildings as required in Sentence 4.2.11.1.(1) and Table 4.2.11.1.] if the quantity of liquids stored outdoors [fire load] is limited and the building or facility
- is small and used primarily for the storage or handling of liquids, or
- is protected in such a manner that a fire in the outdoor container storage area is unlikely to spread inside the adjacent building, and a fire originating inside the building is unlikely to spread to the storage area.

This is to limit the probability of the spread of fire, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Application

A1. Clearances to buildings on the same property – or the clearances to property lines [as stated in Table 4.2.11.1.] – of piles of flammable liquids, combustible liquids and unstable liquids
- where the liquids are stored in outdoor areas,
- where the liquids are stored in aggregate quantities of not more than 5 000 L,
- where the liquids are stored in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L, and
- where the building is limited to 1 storey in building height and is used primarily for the storage or handling of flammable liquids, combustible liquids or unstable liquids, or the exposed wall of the building has a fire-resistance rating of at least 2 h and has no openings within 3 m of such outdoor storage.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the ‘Transportation of Dangerous Goods Regulations’,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- bulk plants, refineries and distilleries,
- liquids in motor or engine fuel tanks,
- distilled beverage alcohol in closed containers when stored in conformance with Part 3,
- food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
- products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

I1. To waive the clearances [to buildings as required in Sentence 4.2.11.1.(1) and Table 4.2.11.1.] if the quantity of liquids stored outdoors [fire load] is limited and the building
- is small and used primarily for the storage or handling of liquids, or
- is protected in such a manner that a fire in the outdoor container storage area is unlikely to spread inside the adjacent building, and a fire originating inside the building is unlikely to spread to the storage area.

This is to limit the probability of the spread of fire, which could lead to harm to persons, including emergency responders.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.2.11.2.(1)-01
Attribution - functional statement/objective Not applicable

CodeText

**Application**

A1. Size [quantity] of individual storage piles located outdoors [as stated in Table 4.2.11.1] and used for the storage of more than one class of flammable liquid, combustible liquid or unstable liquid, where the liquids are stored

- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or
- in portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2,500 L.

Exception:

except as stated in

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.2.1.1.(2), which applies to:
  - bulk plants, refineries and distilleries,
  - liquids in motor or engine fuel tanks,
  - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
  - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
  - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

Intent

H1. To clarify what quantity limits apply to a storage situation for which there would otherwise be no applicable requirement in Table 4.2.11.1. [referenced in Sentence 4.2.11.1.(1)].
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Construction and location of fire department access routes at sites for the outdoor storage of flammable liquids, combustible liquids and unstable liquids, where the liquids are stored:
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L, or
- in portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2 500 L.

Exception:
- except as stated in:
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to:
    - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
    - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.2.1.1.(2), which applies to:
  - bulk plants, refineries and distilleries,
  - liquids in motor or engine fuel tanks,
  - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
  - food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
  - products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids [with the remainder of the solution being non-flammable], when in closed containers having a capacity of not more than 5 L.

I1. To limit the probability that firefighters will be delayed or impeded in conducting firefighting operations, which could lead to the spread of a fire involving the stored products to adjacent buildings, which could lead to damage to adjacent buildings or facilities.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

Application

A1. Spill control measures at sites for the outdoor storage of flammable liquids, combustible liquids, and unstable liquids, where the liquids are stored:
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L,
- in portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2500 L.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.2.1.1.(2), which applies to bulk plants, refineries and distilleries,
- distilled beverage alcohol in closed containers when stored in conformance with Part 3.
- food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
- products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids (with the remainder of the solution being non-flammable), when in closed containers having a capacity of not more than 5 L.

Intent

Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Design, construction, location and securing of fencing at sites for the outdoor storage of flammable liquids, combustible liquids and unstable liquids, where the liquids are stored:
- in containers conforming to Clauses 4.2.3.1.(1)(a) to 4.2.3.1.(1)(d) that have a capacity of not more than 230 L,
- in portable tanks conforming to Clause 4.2.3.1.(1)(e) that have an individual capacity of not more than 2500 L.

Exception: except as stated in:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to:
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.2.1.1.(2), which applies to:
  - bulk plants, refineries and distilleries,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - distilled beverage alcohol in closed containers when stored in conformance with Part 3,
- food and pharmaceutical products when in closed containers having a capacity of not more than 5 L, and
- products containing not more than 50% by volume of water-miscible flammable liquids or combustible liquids (with the remainder of the solution being non-flammable), when in closed containers having a capacity of not more than 5 L.

Not applicable
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Storage tanks and portable tanks that have a capacity greater than 2 500 L [as stated in Sentence 4.2.1.1.(3)] for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139, the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act, the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Subsection 4.10.3., which applies to distilled beverage alcohol at distilleries.

Intent

I1. To state the application of Section 4.3.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Design and construction of atmospheric storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

A2. This also applies to the refurbishing of storage tanks for reuse, as stated in Sentence 4.3.1.10. (1).

Intent
I. To limit the probability of the escape of liquid from the tank, which could lead to harm to the public.
A1. Design and construction of atmospheric storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5., liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.1.3.1.2,(2), which applies to distilled beverage alcohol at distilleries,
- Sentence 4.1.3.1.2,(3), which applies when necessitated by possible contamination of the liquid or possible rapid corrosion of the tank, and
- Sentence 4.1.3.1.2,(4), which applies when the temperature of the liquid is at or above its boiling point.

A2. This also applies to the refurbishing of storage tanks for reuse, as stated in Sentence 4.3.1.10. (1).

Intent
I1. To limit the probability of the escape of liquid from the tank, which could lead to the release and subsequent ignition of vapour, which could lead to harm to persons.
I2. To limit the probability of the release and subsequent ignition of vapour from the tank, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Design and construction of atmospheric storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas, where there is
- possible contamination of the liquid being stored from contact of the liquid or its vapours with the tank, or
- possible rapid corrosion of the tank from contact with the liquid being stored or its vapours.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to distilled beverage alcohol at distilleries.

Application

A1. Design and construction of atmospheric storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas, where there is
- possible contamination of the liquid being stored from contact of the liquid or its vapours with the tank, or
- possible rapid corrosion of the tank from contact with the liquid being stored or its vapours.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to distilled beverage alcohol at distilleries.

Intent

11. To remove tanks from the application of Sentence 4.3.1.2.(1) if the tanks are designed and constructed to limit the probability of the escape of liquid and vapour, but only if there is a situation of
- possible contamination of the liquid being stored from contact of the liquid or its vapour with the tank, or
- possible rapid deterioration of the tank from contact with the liquid being stored or its vapour, which could lead to the premature failure of the tank and the escape of its contents.
Application and intent of Division B provisions

Application

A1. Atmospheric storage tanks for flammable liquids and combustible liquids at a temperature at or above their boiling point, in buildings, structures and open areas.

Exception:

- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”.
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Subsection 4.10.3., which applies to distilled beverage alcohol at distilleries.

Intent

I1. To limit the probability of the release and subsequent ignition of vapour from the tank, which could lead to harm to persons.

I2. To limit the probability of the buildup of excessive internal pressure in the tank, which could lead to the failure of the tank, which could lead to the escape of liquid, which could lead to the ignition of vapour, which could lead to a fire or explosion, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

4.1.1.1.1 Atmospheric storage tanks for flammable liquids and combustible liquids at a temperature at or above their boiling points, in buildings, structures and open areas.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to distilled beverage alcohol at distilleries.

Intent
I1. To limit the probability of the buildup of excessive internal pressure in the tank, which could lead to the failure of the tank, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Design and construction of low pressure storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:

except as stated in

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to distilled beverage alcohol at distilleries.

I1. To limit the probability of the escape of liquid from the tank, which could lead to harm to the public.
I2. To limit the probability of the buildup of excessive internal pressure in the tank, which could lead to the failure of the tank, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Intent

I1. To limit the probability of the escape of liquid from the tank, which could lead to the ignition of vapour, which could lead to a fire or explosion, which could lead to harm to persons.

I2. To limit the probability of the release and subsequent ignition of vapour from the tank, which could lead to a fire or explosion, which could lead to harm to persons.

I3. To limit the probability of the buildup of excessive internal pressure in the tank, which could lead to the failure of the tank, which could lead to the escape of liquid, which could lead to the ignition of vapour, which could lead to a fire or explosion, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Use of low pressure storage tanks and pressure vessels for flammable liquids and combustible liquids at pressures from atmospheric to 3.5 kPa (gauge), in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to distilled beverage alcohol at distilleries.

A11. To permit flexibility in the use of tanks designed for higher pressures for use as atmospheric storage tanks.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Maximum operating pressure of storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:

- Sentence 4.1.1.1.2, which applies to unique hazards in process plants,
- Sentence 4.1.1.1.3, which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to distilled beverage alcohol at distilleries.

I1. To limit the probability of the buildup of excessive internal pressure in the tank, which could lead to the failure of the tank, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Maximum operating pressure of storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:

- except as stated in - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to distilled beverage alcohol at distilleries.

Intent

I1. To limit the probability of the buildup of excessive internal pressure in the tank, which could lead to the failure of the tank, which could lead to the escape of liquid, which could lead to the ignition of vapour, which could lead to a fire or explosion, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.3.1.5.(1)-01
Attribution - functional statement/objective F80-OH5

Coatings of exposed surfaces of aboveground storage tanks – and portable tanks that have a capacity greater than 2,500 L [as stated in Sentence 4.2.1.1.(3)] – made of ferrous material and used for flammable liquids or combustible liquids that is fabricated of any ferrous substance shall be thoroughly coated with a rust-resisting material that is compatible with the tank.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to distilled beverage alcohol at distilleries.

Application

A1. Coatings of exposed surfaces of aboveground storage tanks – and portable tanks that have a capacity greater than 2,500 L [as stated in Sentence 4.2.1.1.(3)] – made of ferrous material and used for flammable liquids or combustible liquids in open areas.

I1. To limit the probability of the premature corrosion of the tank, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

CodeReference (including record number) 4.3.1.5.(1)-02
Attribution - functional statement/objective F80-OS1.1

CodeText

1) The exposed surface of every aboveground storage tank for flammable liquids or combustible liquids that is fabricated of any ferrous substance shall be thoroughly coated with a rust-resisting material that is compatible with the tank.

Application

A1. Coatings of exposed surfaces of aboveground storage tanks made of ferrous material and used for flammable liquids or combustible liquids in open areas.

Exception:

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to distilled beverage alcohol at distilleries.

Intent

11. To limit the probability of the premature corrosion of the tank, which could lead to the escape of liquid or vapour, which could lead to a fire or explosion hazard, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Construction of floating roof assemblies or internal floating covers installed in storage tanks for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:
except for perimeter sealing material, except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to distilled beverage alcohol at distilleries.

Intent

I1. To limit the probability that exposure to fire will lead to the failure of the tank roof or covers, which could lead to the release and subsequent ignition of vapour from the tank, which could lead to a fire or explosion, which could lead to harm to persons.
Application and intent of Division B provisions

Application
A1. Identification of storage tanks for flammable liquids and combustible liquids and their filling and emptying connections, in buildings, structures and open areas.

Exception:
- except as stated in Sentences 4.3.1.7.(2) and 4.3.1.7.(3), which apply to the legibility and location of signs.
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to distilled beverage alcohol at distilleries.

Intent
I1. To limit the probability of delays or inefficiencies in responding to a fire emergency, which could lead to the spread of fire beyond the point of fire origin, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

A1. Identification of storage tanks for flammable liquids and combustible liquids and their filling and emptying connections, in buildings, structures and open areas.

Exception:
   - Sentences 4.3.1.7.(2) and 4.3.1.7.(3), which apply to the legibility and location of signs.
   - Sentences 4.1.1.1.(2), which applies to unique hazards in process plants,
   - Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
   - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
   - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
   - the storage of aerosol products covered under Subsection 3.2.5.,
   - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
   - the storage of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
   - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
   - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
   - Subsection 4.10.3., which applies to distilled beverage alcohol at distilleries.

Intent
   I1. To limit the probability of the mixing of incompatible products — or the mixing of Class I liquids with Class II or III liquids — during normal operations, which could lead to a fire or explosion, which could lead to harm to persons.

   I2. To limit the probability of delays or inefficiencies in responding to a fire emergency, which could lead to the spread of fire beyond the point of fire origin, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference: 4.3.1.7.(2)-01
Attribution: functional statement/objective F12-OP1.2

Application

A1. Legibility of signs that identify contents of storage tanks for flammable liquids and combustible liquids in buildings, structures and open areas.

Exception:

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to distilled beverage alcohol at distilleries.

Intent

I1. To limit the probability of delays, inefficiencies, or inappropriate action in responding to a fire emergency, which could lead to the spread of fire beyond the point of fire origin, which could lead to damage to the building or facility.
A1. Legibility of signs that identify contents of storage tanks for flammable liquids and combustible liquids in buildings, structures and open areas. 

Exception: 
- except as stated in - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants, - Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations", - appliances and their ancillary equipment within the scope of CAN/CSA-B139, - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects, - the storage of aerosol products covered under Subsection 3.2.5., - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act, - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act, - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55, - Subsection 4.10.3., which applies to distilled beverage alcohol at distilleries.

I1. To limit the probability of delays, inefficiencies, or inappropriate action in responding to a fire emergency, which could lead to the spread of fire beyond the point of fire origin, which could lead to harm to persons.
Application and intent of Division B provisions

3) Signs installed in accordance with Sentence (2) shall be located on at least two sides of a storage tank.

Application

A1. Location of signs that identify contents of storage tanks for flammable liquids and combustible liquids in buildings, structures and open areas.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to distilled beverage alcohol at distilleries.

Intent

I1. To limit the probability of delays, inefficiencies, or inappropriate action in responding to a fire emergency, which could lead to the spread of fire beyond the point of fire origin, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Location of signs that identify contents of storage tanks for flammable liquids and combustible liquids in buildings, structures and open areas.

Exception:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of Dangerous Goods Regulations,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to distilled beverage alcohol at distilleries.

Intent

I1. To limit the probability of delays, inefficiencies, or inappropriate action in responding to a fire emergency, which could lead to the spread of fire beyond the point of fire origin, which could lead to harm to persons.
Application and intent of Division B provisions

**Application**

A1. Overfill protection of storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas.

**Exception:**

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to distilled beverage alcohol at distilleries.

**Intent**

1. To limit the probability of the escape of liquid from the tank, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Overfill protection of storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to distilled beverage alcohol at distilleries.

Application

1. Overfill protection of storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas.

Intent
11. To limit the probability of the escape of liquid from the tank, which could lead to the ignition of vapour, which could lead to a fire or explosion, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Installation and use of storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants;
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”;
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries.

1) Unless otherwise specified in this Code, a storage tank shall be installed and used in conformance with the applicable installation and use provisions of the design document to which the storage tank was built as required by this Section.

Application

A1. Installation and use of storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas.

Intent

I1. To limit the probability of the escape of liquid from the tank, which could lead to harm to the public.

I2. To limit the probability of the buildup of excessive pressure inside the tank, which could lead to the failure of the tank, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Application
A1. Installation and use of storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries.

Intent
I1. To limit the probability of the escape of liquid from the tank, which could lead to the ignition of vapour from a nearby ignition source, which could lead to a fire or explosion, which could lead to harm to persons.
I2. To limit the probability of the release and subsequent ignition of vapour from the tank, which could lead to a fire or explosion, which could lead to harm to persons.
I3. To limit the probability of the buildup of excessive pressure inside the tank, which could lead to the failure of the tank, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to a fire or explosion, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

2) Except for storage tanks being withdrawn from service in accordance with Subsections 4.3.15. and 4.3.16. or that are exempt from registration under Article 2.2.5.1. of Division C, no person shall deliver or remove flammable liquids or combustible liquids to or from a storage tank, unless

a) the storage tank is registered under Article 2.2.5.2. of Division C, and

b) the registration certificate is displayed as required by Sentence 2.2.5.2.(5) of Division C.

Application

A1. Prohibition on delivering or removing flammable liquids and combustible liquids to or from storage tanks in buildings, structures and open areas.

Exception:

except as stated in

- Subsections 4.3.15. and 4.3.16., which apply to a storage tank being withdrawn from service,

- Article 2.2.5.1. of Division C, which applies to a storage tank that is exempt from registration,

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,

- Sentence 4.1.1.1.(3), which applies to

  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,

  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,

  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,

  - the storage of aerosol products covered under Subsection 3.2.5.,

  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,

  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,

  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and

  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,

- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries.

Intent

I1. To direct the user of the Alberta Fire Code 2006 to the requirements of Article 2.2.5.2. of Division C pertaining to the registration of storage tanks.
Application of Division B provisions

Alberta Fire Code 2006

A1. Documentation pertaining to storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries.

Application

A1. Documentation pertaining to storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries.

Intent

I1. To enable the authority having jurisdiction to assess compliance with the Alberta Fire Code 2006.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

The owner shall make the documentation described in Sentence (3) available in conformance with Article 2.2.1.2. of Division C.

Intent

To state the application of Article 2.2.1.2. of Division C.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.3.1.10.(1)-01
Attribution - functional statement/objective Not applicable

1) Except as permitted by Subsection 4.3.15., a storage tank that has been taken out of service shall not be reused for the storage of flammable liquids or combustible liquids unless it has been:
   a) refurbished so as to conform to one of the standards listed in Sentence 4.3.1.2.(1), or
   b) refurbished in conformance with Sentence (2) or (3).

Application

A1. Refurbishing [for reuse] of flammable liquid and combustible liquid storage tanks that have been removed, abandoned or taken out of service, in buildings, structures and open areas.

Exception:

- except as stated in Sentences 4.3.1.10.(2) and 4.3.1.10.(3), which apply to the refurbishing of storage tanks in conformance with certain standards, and
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to:
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,

Intent

I1. To expand the application of Sentence 4.3.1.2.(1) and require that the same standards used for building new tanks be applied to the refurbishing of tanks for reuse.
Application and intent of Division B provisions

CodeReference (including record number)  4.3.1.10.(1)-02

Intention

I1. To limit the probability of the escape of liquid from tanks, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons.

I2. To limit the probability of the escape of vapour from tanks, which could lead to the ignition of the vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Relocation [for reuse] of riveted storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,

Application

F81-OH5

Attribution - functional statement/objective

4) A riveted storage tank shall not be relocated.

4.3.1.10.(4)-01

CodeReference (including record number)

CodeText

I1. To limit the probability that the tank will be damaged during relocation operations, which could lead to the escape of liquid, which could lead to harm to the public.

I2. To limit the probability that the relocated tank will be reused, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Application

A1. Relocation [for reuse] of riveted storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
    - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that the tank will be damaged during relocation operations, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.

I2. To limit the probability that the relocated tank will be reused, which could lead to the escape of liquid or vapour, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
A1. Location of outside aboveground storage tanks – and portable tanks that have a capacity greater than 2 500 L [as stated in Sentence 4.2.1.1.(3)] – for the storage of flammable liquids and combustible liquids.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries.

I1. To direct Alberta Fire Code 2006 users to Sentences 4.3.2.1.(2) to 4.3.2.1.(5).
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.3.2.1.(2)-01
Attribution - functional statement/objective F03-OP3.1

CodeText

2) Except as provided in Sentences (6) and (7), every aboveground storage tank containing stable liquids and having a working pressure of not more than 17 kPa (gauge) shall be separated from a property line or a building on the same property by distances

a) half those in Table 4.3.2.1., where protection is provided against fire or explosion in the tank in conformance with Sentence 4.3.2.5.(2), or

b) equal to those in Table 4.3.2.1., where protection referred to in Clause (a) is not provided.

Application

A1. Minimum spatial separation distances to property lines, or to a building on the same property, for outside aboveground storage tanks – and portable tanks that have a capacity greater than 2 500 L [as stated in Sentence 4.2.1.1.(3)] – that have a working pressure of not more than 17 kPa (gauge) and contain stable flammable liquids or combustible liquids.

Exception:

except as stated in
- Sentence 4.3.2.1.(6), which applies to certain sized storage tanks containing only Class II or IIIA liquids,
- Sentence 4.3.2.1.(7), which applies to storage tanks conforming to ULC-S655 and having a capacity not greater than 50 000 L,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries.

Intent

I1. To limit the probability that a fire in or associated with tanks and their liquids will spread to adjacent buildings or facilities, which could lead to damage to adjacent buildings or facilities.
A1. Minimum spatial separation distances to property lines, or to a building on the same property, for outside aboveground storage tanks — and portable tanks that have a capacity greater than 2 500 L (as stated in Sentence 4.2.1.1.(3)) — that have a working pressure of not more than 17 kPa (gauge) and contain stable flammable liquids or combustible liquids.

Exception:
- except as stated in Sentence 4.3.2.1.(6), which applies to certain sized storage tanks containing only Class II or IIIA liquids,
- Sentence 4.3.2.1.(7), which applies to storage tanks conforming to ULC-S655 and having a capacity not greater than 50 000 L,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries.

I1. To limit the probability that a fire in or associated with tanks and their liquids will lead to harm to persons in outdoor areas or adjacent buildings.
Application and intent of Division B provisions

4) Every aboveground storage tank containing boil-over liquids shall be separated from a property line or a building on the same property by distances
a) 0.75 times those in Table 4.3.2.1., where protection is provided against fire or explosion in the tank in conformance with Sentence 4.3.2.5.(2), or
b) equal to those in Table 4.3.2.1., where protection referred to in Clause (a) is not provided.
(See Appendix A.)

Application

A1. Minimum spatial separation distances to property lines, or to a building on the same property, for outside aboveground storage tanks – and portable tanks that have a capacity greater than 2 500 L as stated in Sentence 4.2.1.1.(3) – that contain boil-over flammable liquids or combustible liquids.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,

CodeText

5) Where a storage tank containing stable liquids or unstable liquids has a working pressure greater than 17 kPa (gauge), the distances from a property line or a building on the same property shall be those specified in Sentences (2) and (3) multiplied by 1.5, but shall be not less than 7.5 m.

Application

A1. Minimum spatial separation distances to property lines, or to a building on the same property, for outside aboveground storage tanks – and portable tanks that have a capacity greater than 2 500 L [as stated in Sentence 4.2.1.1.3] – that have a working pressure greater than 17 kPa (gauge) and contain stable liquids or unstable liquids.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries.

Intent

11. To limit the probability that a fire in or associated with tanks and their liquids will lead to harm to persons in outdoor areas or adjacent buildings.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Minimum spatial separation distances to a building on the same property, for storage tanks that have a capacity of not more than 50 000 L – or portable tanks that have a capacity greater than 2 500 L but not more than 50 000 L – containing only Class II or IIIA liquids and having a working pressure of not more than 17 kPa (gauge).

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries.

Intent

I1. To reduce the clearances required in Sentence 4.3.2.1.(2) if the tank
- contains only liquids that will not produce vapour at normal ambient temperatures, and
- has a capacity that does not pose a fire hazard.

This is to limit the probability of damage to adjacent buildings or facilities.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Minimum spatial separation distances to a building on the same property, for storage tanks that have a capacity of not more than 50 000 L – or portable tanks that have a capacity greater than 2 500 L [as stated in Sentence 4.2.1.1.(3)] but not more than 50 000 L – containing only Class II or IIIA liquids and having a working pressure of not more than 17 kPa (gauge).

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries.

Application

F03-OS1.2

4.3.2.1.(6)-02

6) The minimum distance required in Sentence (2) from a storage tank containing only Class II or IIIA liquids to a building on the same property is permitted to be reduced to:

a) 1.5 m provided the tank capacity is not more than 50 000 L,

b) 0.5 m provided the tank capacity is not more than 5 000 L, or

c) zero provided the tank capacity is not more than 2 500 L.

CodeReference (including record number)

Attribution - functional statement/objective

I1. To reduce the clearances required in Sentence 4.3.2.1.(2) if the tank
- contains only liquids that will not produce vapour at normal ambient temperatures, and
- has a capacity that does not pose a fire hazard, which could lead to a fire or explosion, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

4.3.2.1.(6)-03

A1. Minimum spatial separation distances to a building on the same property, for storage tanks that have a capacity of not more than 50 000 L – or portable tanks that have a capacity greater than 2 500 L [as stated in Sentence 4.2.1.1.(3)] but not more than 50 000 L – containing only Class II or IIIA liquids and having a working pressure of not more than 17 kPa (gauge).

Exception:

- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
    - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries.

Intent

I1. To reduce the clearances to a building on the same property required in Sentence 4.3.2.1.(2) if the tank

- contains only liquids that will not produce vapour at normal ambient temperatures, and
- has a capacity not exceeding that of tanks permitted by CAN/CSA-B139 to be installed adjacent to a detached building unit.

This is to limit the probability of damage to adjacent buildings or facilities.
Application and intent of Division B provisions

Application

A1. Minimum spatial separation distances to a building on the same property, for storage tanks that have a capacity of not more than 50 000 L – or portable tanks that have a capacity greater than 2 500 L [as stated in Sentence 4.2.1.1.(3)] but not more than 50 000 L – containing only Class II or IIIA liquids and having a working pressure of not more than 17 kPa (gauge).

Exception:
- except as stated in - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries.

Intent

I1. To reduce the clearances to a building on the same property required in Sentence 4.3.2.1.(2) if the tank - contains only liquids that will not produce vapour at normal ambient temperatures, and - has a capacity not exceeding that of tanks permitted by CAN/CSA-B139 to be installed adjacent to a detached building unit, which could lead to a fire or explosion, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Spatial separation distances to a property line, or to a building on the same property, for storage tanks that
- have a capacity of not more than 50 000 L,
- contain flammable liquids or combustible liquids,
- have a working pressure of not more than 17 kPa (gauge), and
- conform to ULC-S655.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries.

I1. To reduce the clearances required in Sentence 4.3.2.1.(2) if the tank will not fail for a period of 2 h when submitted to a high intensity furnace test and has a capacity that does not pose a fire hazard.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Spatial separation distances to a property line, or to a building on the same property, for storage tanks that
- have a capacity of not more than 50 000 L,
- contain flammable liquids or combustible liquids,
- have a working pressure of not more than 17 kPa (gauge), and
- conform to ULC-S655.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries.

I1. To reduce the clearances required in Sentence 4.3.2.1.(2) if the tank will not fail for a period of 2 h when submitted to a high intensity furnace test and has a capacity that does not pose a fire hazard.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Location and orientation of outside aboveground horizontal storage tanks — and portable tanks that have a capacity greater than 2,500 L [as stated in Sentence 4.2.1.1.(3)] — for flammable liquids and combustible liquids.

Exception:

- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries.

Intent

I1. To limit the probability of the axial travelling (rocketing) of tanks upon tank failure when exposed to fire, which could lead to damage to adjacent buildings or facilities.
A1. Computation of minimum distance between every combination of two outside aboveground storage tanks or portable tanks that have a capacity greater than 2,500 L [as stated in Sentence 4.2.1.(1).3] – for flammable liquids and combustible liquids.

Exception:
- except as stated in Sentence 4.3.2.2.(2), which applies to tanks that do not have a capacity greater than 250,000 L,
- Sentence 4.3.2.2.(3) where either one of the tanks contains an unstable liquid,
- Article 4.3.2.3., which applies to clearances from liquefied petroleum gas cylinders or tanks,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries.

I1. To limit the probability of the spread of fire from one tank to another, which could lead to damage to the facility.

I2. To limit the probability of delays or inefficiencies in conducting firefighting operations, which could lead to the spread of fire from one tank to another, which could lead to damage to the facility.
A1. Minimum 1 m distance between every combination of two outside aboveground storage tanks—
or portable tanks that have a capacity greater than 2,500 L [as stated in Sentence 4.2.1.1.(3)]—for flammable liquids and combustible liquids.

Exception:
- except as stated in Sentence 4.3.2.2.(2), which applies to tanks that do not have a capacity greater than 250,000 L,
- Sentence 4.3.2.2.(3) where either one of the tanks contains an unstable liquid,
- Article 4.3.2.3., which applies to clearances from liquefied petroleum gas cylinders or tanks,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries.

I1. To limit the probability that the escape of liquid will remain unnoticed, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

A1. Minimum 1 m distance between every combination of two aboveground storage tanks shall be 0.25 times the sum of their diameters, but shall be not less than 1 m.

Exception:
- except as stated in Sentence 4.3.2.2.(2), which applies to tanks that do not have a capacity greater than 250,000 L,
- Sentence 4.3.2.2.(3) where either one of the tanks contains an unstable liquid,
- Article 4.3.2.3., which applies to clearances from liquefied petroleum gas cylinders or tanks,
- Sentence 4.1.1.1.(3), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”.
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries.

Intent
I1. To limit the probability that the escape of liquid will remain unnoticed, which could lead to the ignition of vapour, which could lead to the spread of fire to another tank, which could lead to damage to the facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Minimum 1 m distance between every combination of two aboveground storage tanks shall be 0.25 times the sum of their diameters, but shall be not less than 1 m.

Exception:
- except as stated in Sentence 4.2.1.1.(3) – for flammable liquids and combustible liquids.
- Sentence 4.3.2.2.(2), which applies to tanks that do not have a capacity greater than 250 000 L,
- Sentence 4.3.2.2.(3) where either one of the tanks contains an unstable liquid,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries.

Intent
I1. To limit the probability that tank defects, premature deterioration, or the escape of liquid will remain unnoticed, which could lead to the ignition of vapour, which could lead to a fire or explosion, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Minimum distance between any 2 outside aboveground storage tanks – or portable tanks that have a capacity greater than 2 500 L [as stated in Sentence 4.2.1.1.(3)] – for flammable liquids and combustible liquids, where neither of the tanks has a capacity of more than 250 000 L.

Exception:
- except as stated in Sentence 4.3.2.2.(3) where either one of the tanks contains an unstable liquid,
- Article 4.3.2.3., which applies to clearances from liquefied petroleum gas cylinders or tanks,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries,
- Sentence 4.3.2.2.(3), which applies where either one of the tanks contains unstable liquids.

Intent
I1. To reduce the required spacing [in Sentence 4.3.2.2.(1)] intended to avoid the spread of fire from one tank to another for tanks of such limited capacities that they are deemed to pose a lesser fire hazard.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Minimum distance between any two outside aboveground storage tanks – or portable tanks that have a capacity greater than 2 500 L [as stated in Sentence 4.2.1.1.(3)] – where either of the tanks contain unstable liquids.

Exception:
- Article 4.3.2.3., which applies to clearances from liquefied petroleum gas cylinders or tanks,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries,
- Sentence 4.3.2.2.(3), which applies where either one of the tanks contains unstable liquids.

Intent
1. To increase the required spacing intended to limit the probability of the spread of fire from one tank to another if either tank contains liquids that can undergo violent decomposition or reaction.
Application and intent of Division B provisions

Alberta Fire Code 2006

**Application and intent of Division B provisions**

**CodeReference** (including record number) 4.3.2.3.(1)-01
**Attribution - functional statement/objective** F03-OP1.2

### CodeText

1) The minimum separation between a flammable liquid or combustible liquid storage tank and a liquefied petroleum gas cylinder or tank shall be 6 m.

#### Application

A1. Minimum distance between outside aboveground storage tanks for flammable liquids or combustible liquids – or portable tanks that have a capacity greater than 2 500 L [as stated in Sentence 4.2.1.1.(3)] – and liquefied petroleum gas cylinders or tanks.

Exception:

- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries.

#### Intent

I1. To limit the probability that a fire in or associated with liquid storage tanks will spread to adjacent liquefied petroleum gas cylinders or tanks, which could lead to damage to the liquid storage tanks.

I2. To limit the probability that a fire or explosion associated with liquefied petroleum gas cylinders or tanks will lead to a fire exposure hazard to the liquid storage tanks, which could lead to damage to the facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Secondary containments for outside aboveground storage tanks for flammable liquids and combustible liquids – or portable tanks that have a capacity greater than 2,500 L [as stated in Sentence 4.2.1.1.(3)] – and for liquefied petroleum gas cylinders or tanks.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries.

I1. To limit the probability that a spill fire in the secondary containment will spread to adjacent liquefied petroleum gas cylinders or tanks, which could lead to damage to the liquid storage tank.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Spacing between outside aboveground storage tanks for flammable liquids or combustible liquids shall be spaced so that each storage tank is accessible for firefighting purposes.

Application

1) Except as provided in Sentences (2) and (3), storage tanks for flammable liquids or combustible liquids shall be spaced so that each storage tank is accessible for firefighting purposes.

Exception:

except as stated in
- Sentence 4.3.2.4.(2), which applies to fire department access routes,
- Sentence 4.3.2.4.(3), which applies where fire extinguishing measures are provided for storage tanks containing Class I or II liquids,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries.

Intent

I1. To limit the probability of delays and inefficiencies in conducting firefighting operations, which could lead to the spread of fire from adjacent tanks, buildings or property to the tank, which could lead to damage to the facility.

I2. To limit the probability of delays and inefficiencies in conducting firefighting operations, which could lead to the spread of fire in or associated with the tank to adjacent tanks, which could lead to damage to the facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Location and arrangement of fire department access routes in outdoor storage areas for aboveground storage tanks for flammable liquids or combustible liquids, or portable tanks that have a capacity greater than 2,500 L [as stated in Sentence 4.2.1.1.(3)].

Exception:
- except as stated in Sentence 4.3.2.4.(3), which applies where fire extinguishing measures are provided for tanks containing Class I or II liquids,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries.

Application

F12-OP1.2

I1. To limit the probability that firefighters will be delayed or impeded in conducting firefighting operations, which could lead to the spread of fire from adjacent tanks, buildings or property to the tank, which could lead to damage to the facility.

I2. To limit the probability that firefighters will be delayed or impeded in conducting firefighting operations, which could lead to the spread of fire in or associated with the tank to adjacent tanks, which could lead to damage to the facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

CodeReference (including record number)  4.3.2.4.(3)-01
Attribution - functional statement/objective  F02,F03-OP1.2

CodeText

3) Where firefighting access to storage tanks containing Class I or II liquids is not provided, fire extinguishing measures conforming to Sentence 4.3.2.5,(2) shall be provided.

Application

A1. Firefighting access to outdoor aboveground storage tanks – or portable tanks that have a capacity greater than 2 500 L [as stated in Sentence 4.2.1.1.(3)] – containing Class I or II liquids and provided with fire extinguishing measures [conforming to Sentence 4.3.2.5,(2)].

Exception:

- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries.

Intent

I1. To remove such tanks from the requirements of Sentences 4.3.2.4.(1) and 4.3.2.4.(2), and to provide an access route and spacing between tanks, if automatic fire protection measures are provided:
- to control and limit fire to the tank of fire origin, and
- to protect the tank from fire exposure.
A1. Fixed protection systems for outside aboveground storage tanks – or portable tanks that have a capacity greater than 2 500 L [as stated in Sentence 4.2.1.1.(3)] – containing Class I or II liquids when a fire department access route and spacing between tanks [in conformance with Sentences 4.3.2.4.(1) and 4.3.2.4.(2)] are not provided.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries.
Application and intent of Division B provisions

Application

A1. Fixed protection of outside aboveground storage tanks for flammable liquids or combustible liquids that have a diameter greater than 45 m.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries.

Intent

I1. To state [part of] the application of Sentence 4.3.2.5.(2).
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.3.2.5.(2)-01
Attribution - functional statement/objective F02-OS1.2

CodeText

A1. Design of fixed protection systems for outside aboveground storage tanks for flammable liquids or combustible liquids that have a diameter greater than 45 m (as stated in Sentence 4.3.2.5.(1)) where
- spacing of the tanks or an access route [as stated in Sentences 4.3.2.4.(1) and 4.3.2.4.(2)] is not provided,
- firefighting access to storage tanks containing Class I or II liquids is not provided [as stated in Sentence 4.3.2.4.(3)], or
- clearances of the tanks from property lines or from buildings on the same property require protection against fires or explosions [as stated in Clauses 4.3.2.1.(2)(a), 4.3.2.1.(3)(a) and 4.3.2.1.(4)(a)].

A2. This also applies to fixed protection systems for outdoor processing equipment at process plants, as required in Article 4.9.2.1.

Exception:
- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
    - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries.

Intent

I1. To limit the probability that a fire in or associated with the tank will lead to harm to persons in adjacent buildings or on adjacent properties.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

CodeReference (including record number) 4.3.2.5.(2)-02
Attribution - functional statement/objective P02,F03-OP1.2

CodeText

2) Protection against fires or explosions required for a storage tank shall consist of fixed protection systems designed in conformance with good engineering practice such as described in a) NFPA 11, “Low-, Medium-, and High-Expansion Foam,”
b) NFPA 15, “Water Spray Fixed Systems for Fire Protection,” and
c) NFPA 69, “Explosion Prevention Systems.”

Application

A1. Design of fixed protection systems for outside aboveground storage tanks for flammable liquids or combustible liquids that have a diameter greater than 45 m [as stated in Sentence 4.3.2.5.(1)] where
- spacing of the tanks or an access route [as stated in Sentences 4.3.2.4.(1) and 4.3.2.4.(2)] is not provided,
- firefighting access to storage tanks containing Class I or II liquids is not provided [as stated in Sentence 4.3.2.4.(3)], or
- clearances of the tanks from property lines or from buildings on the same property require protection against fires or explosions [as stated in Clauses 4.3.2.1.(2)(a), 4.3.2.1.(3)(a) and 4.3.2.1.(4)(a)].

A2. This also applies to fixed protection systems for outdoor processing equipment at process plants, as required in Article 4.9.2.1.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries.

Intent

I1. To limit the probability that a fire in or associated with the tank will spread to adjacent tanks on the same property, which could lead to damage to the facility.

I2. To limit the probability of the spread of fire from adjacent buildings, tanks or property to the tank, which could lead to damage to the facility.
A1. Materials of foundations, supports and pilings for aboveground storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:
except as stated in
- Sentence 4.3.12.9.(2), which applies to indoor suspended tanks,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.3.2.(1), which applies to timber supports for distilled beverage alcohol at distilleries.

I1. To limit the probability of excessive movement of the tank, which could lead to the failure of the tank and associated piping, which could lead to the escape of liquid from the tank, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

CodeReference (including record number) 4.3.3.1.(1)-02

Application

A1. Materials of foundations, supports and pilings for aboveground storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in
- Sentence 4.3.12.9.(2), which applies to indoor suspended tanks,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.3.2.(1), which applies to timber supports for distilled beverage alcohol at distilleries.

Intent

I1. To limit the probability of excessive movement of the tank, which could lead to the failure of the tank and associated piping, which could lead to the escape of liquid from the tank, which could lead to the ignition of vapour, which could lead to a fire or explosion, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Noncombustible materials for foundations, supports and pilings for aboveground storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.3.12.9.(2), which applies to indoor suspended tanks,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.3.2.(1), which applies to timber supports for distilled beverage alcohol at distilleries.

Application

A1. Noncombustible materials for foundations, supports and pilings for aboveground storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in
  - Sentence 4.3.12.9.(2), which applies to indoor suspended tanks,
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Sentence 4.10.3.2.(1), which applies to timber supports for distilled beverage alcohol at distilleries.

Intent

I1. To limit the probability that combustible supports will contribute to a fire under the tank, which could lead to the failure of the tank from exposure to the fire, which could lead to the growth and spread of fire, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Design and construction of firm foundations and the installation of supports for aboveground storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception: except as stated in
- Sentence 4.3.12.9.(2), which applies to indoor suspended tanks, and
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

2) Tank supports shall be installed on firm foundations designed to minimize uneven settling of the tank and to minimize corrosion of the part of the tank resting on the foundation.

Exception:
- Sentence 4.3.12.9.(2), which applies to indoor suspended tanks, and
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability of excessive movement of the tank, which could lead to the failure of the tank and associated piping, which could lead to the escape of liquid from the tank, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Design and construction of firm foundations and the installation of supports for aboveground storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.3.12.9.(2), which applies to indoor suspended tanks, and
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquified petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Design and construction of firm foundations and the installation of supports for aboveground storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.3.12.9.(2), which applies to indoor suspended tanks, and
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquified petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

CodeText

2) Tank supports shall be installed on firm foundations designed to minimize uneven settling of the tank and to minimize corrosion of the part of the tank resting on the foundation.

Application

A1. Design and construction of firm foundations and the installation of supports for aboveground storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.3.12.9.(2), which applies to indoor suspended tanks, and
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquified petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

11. To limit the probability of excessive movement of the tank, which could lead to the failure of the tank and associated piping, which could lead to the escape of liquid from the tank, which could lead to the ignition of vapour, which could lead to a fire or explosion, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Design and construction of foundations and the installation of supports that minimize corrosion for aboveground storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.3.12.9.(2), which applies to indoor suspended tanks, and
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

F80-OH5

I1. To limit the probability of the premature corrosion of the tank, which could lead to the escape of liquid from the tank, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Design and construction of foundations and the installation of supports that minimize corrosion for aboveground storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.3.12.9.(2), which applies to indoor suspended tanks, and
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliance and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

11. To limit the probability of the premature corrosion of the tank, which could lead to the escape of liquid from the tank, which could lead to the ignition of vapour, which could lead to a fire or explosion, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

Exception:

- Except for steel saddles that are less than 300 mm high at their highest point.

Exception:

- Sentence 4.10.3.2.(2), which applies to storage tanks for distilled beverage alcohol in distilleries where the supports are protected by an automatic fire suppression system,
- Sentence 4.3.12.9.(2), which applies to indoor suspended tanks,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

3) Except for steel saddles that are less than 300 mm high at their highest point, supports for storage tanks shall provide a fire-resistance rating of not less than 2 h.

Exception:

except for steel saddles that are less than 300 mm high at their highest point.

Exception:

- except as stated in Sentence 4.3.12.9.(2), which applies to indoor suspended tanks,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that exposure to fire will lead to the premature collapse of tank supports, which could lead to the escape of liquid from the tank, which could lead to the spread of fire to adjacent areas, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.3.3.1.(3)-02
Attribution - functional statement/objective F04-OS1.2

CodeText

3) Except for steel saddles that are less than 300 mm high at their highest point, supports for storage tanks shall provide a fire-resistance rating of not less than 2 h.

Application

A1. Waiver of minimum fire-resistance rating of steel supports less than 300 mm high for aboveground storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:
except as stated in
- Sentence 4.10.3.2.(2), which applies to storage tanks for distilled beverage alcohol in distilleries where the supports are protected by an automatic fire suppression system,
- Sentence 4.3.12.9.(2), which applies to indoor suspended tanks,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To remove the requirement for tank supports to provide a 2 h fire-resistance rating if the tank supports are of a noncombustible material with a high melting point and are of sufficiently low height that the fire exposure underneath would not be sufficient to make the tank collapse.

This is to limit the probability of the escape of liquid from the tank, which could lead to the spread of fire, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) F20,F81-OH5

4) Every aboveground storage tank shall be supported in a manner that will prevent the allowable design stress of the tank from being exceeded.

Application

A1. Design of supports for aboveground storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

II. To limit the probability of an excessive concentration of loads on the supporting portion of the tank, which could lead to the failure of the tank, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

4) Every aboveground storage tank shall be supported in a manner that will prevent the allowable design stress of the tank from being exceeded.

Application
A1. Design of supports for aboveground storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent
I1. To limit the probability of an excessive concentration of loads on the supporting portion of the tank, which could lead to the failure of the tank, which could lead to the escape of liquid, which could lead to the ignition of vapour, which could lead to a fire or explosion, which could lead to harm to persons.
Application and intent of Division B provisions

Application

A1. Design [to resist earthquake forces] of supports, connections and aboveground storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas subject to earthquake forces.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability of excessive movement or deformation of the tank, associated piping or supports due to an earthquake, which could lead to the failure of the tank or associated piping, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

4.3.3.2.(1)-02

F22-OS1.1

Application

A1. Design to resist earthquake forces of supports, connections and aboveground storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas subject to earthquake forces.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability of excessive movement or deformation of the tank, associated piping or supports due to an earthquake, which could lead to the failure of the tank or associated piping, which could lead to the escape of liquid, which could lead to a fire or explosion, which could lead to harm to persons.
A1. Anchoring [to prevent floating] of aboveground storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas that may be subjected to flooding.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of Dangerous Goods Regulations,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Anchoring [to prevent floating] of aboveground storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas that may be subjected to flooding.

Exception:
- Sentence 4.1.1.1.2, which applies to unique hazards in process plants,
- Sentence 4.1.1.1.3, which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

1) When aboveground storage tanks are located in an area that is subject to flooding, the tanks shall be securely anchored to prevent floating.

Intent

11. To limit the probability that buoyant forces will lead to the tank being floated from its supports and foundation, which could lead to damage to the tank or its associated piping, which could lead to the escape of liquid, which could lead to a fire or explosion hazard, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Provision of barriers at aboveground storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas if there is potential for mechanical damage from vehicles and other sources.

Exception:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

1) The authority having jurisdiction is permitted to require that an aboveground storage tank be provided with barriers, if there is potential for mechanical damage to the storage tank from vehicles or other sources.

1) To limit the probability that mechanical damage caused by impact from vehicles or other sources would lead to damage to the tank or its associated piping, which could lead to the escape of liquid, which could lead to a fire or explosion hazard, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

4.3.3.4.(1)-02

A1. Provision of barriers at aboveground storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas if there is potential for mechanical damage from vehicles and other sources.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants;
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations";
- appliances and their ancillary equipment within the scope of CAN/CSA-B139;
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects;
- the storage of aerosol products covered under Subsection 3.2.5., liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act;
- the storage of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act;
- production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act;
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

1. To limit the probability that mechanical damage caused by impact from vehicles or other sources would lead to damage to the tank or its associated piping, which could lead to the escape of liquid, which could lead to harm to the public.

1) Atmospheric and low pressure storage tanks shall be provided with normal and emergency venting in conformance with
a) API 2000, “Venting Atmospheric and Low-Pressure Storage Tanks: Nonrefrigerated and Refrigerated,” or
b) the tank design standards listed in Sentence 4.3.1.2.(1).

Application

A1. Emergency venting of aboveground atmospheric storage tanks and low pressure storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.3.3.(1), which applies to distilled beverage alcohol at distilleries.

Intent

I1. To limit the probability that exposure to fire will lead to excessive internal tank pressure, which could lead to the failure of the tank, which could lead to the escape of liquid, which could lead to the ignition of vapour, which could lead to a fire or explosion, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

CodeReference (including record number) 4.3.4.1.(1)-02
Attribution - functional statement/objective F20,F81-OH5

Application

A1. Normal venting of aboveground atmospheric storage tanks and low pressure storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- as provided in Sentence 4.10.3.3.(1), which applies to distilled beverage alcohol at distilleries.

Intent

I1. To limit the probability that atmospheric temperature changes – or liquids entering or leaving the tank – will lead to an excessive internal tank vacuum or pressure, which could lead to the failure of the tank, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

Application

A1. Normal venting of aboveground atmospheric storage tanks and low pressure storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:

- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.3.3.(1), which applies to distilled beverage alcohol at distilleries.

Intent

I1. To limit the probability that atmospheric temperature changes – or liquids entering or leaving the tank – will lead to an excessive internal tank vacuum or pressure, which could lead to the failure of the tank, which could lead to the escape of liquid, which could lead to the ignition of vapour, which could lead to a fire or explosion, which could lead to harm to persons.
Application and intent of Division B provisions

Application

A1. Normal and emergency venting of aboveground storage tanks for unstable liquids, in buildings, structures and open areas.

Exception:

- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”;
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.1,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that chemical reaction or exposure to fire will lead to excessive internal tank pressure, which could lead to the failure of the tank, which could lead to the escape of liquid, which could lead to harm to the public.
ALBERTA FIRE CODE 2006

APPLICATION AND INTENT OF DIVISION B PROVISIONS

APPLICATION

A1. Normal and emergency venting of aboveground storage tanks for unstable liquids, in buildings, structures and open areas.

Exception:

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

INTENT

I1. To limit the probability that chemical reaction or exposure to fire will lead to excessive internal tank pressure, which could lead to the failure of the tank, which could lead to the escape of liquid, which could lead to the ignition of vapour, which could lead to a fire or explosion, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Materials for and construction of normal and emergency vent piping for aboveground storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas.

Application

1) Except at distilleries covered in Section 4.10., vent piping materials and construction shall conform to Subsections 4.5.2., 4.5.3. and 4.5.5.

Exception:

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.5.1.(1) and Clause 4.5.1.1.(2)(d), which apply to piping and pumping systems for distilled beverage alcohol at distilleries.

Intent

11. To direct Alberta Fire Code 2006 users to Subsections 4.5.2., 4.5.3. and 4.5.5.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.3.5.2.(1)-01
Attribution - functional statement/objective F01-O51.1

CodeText

1) Normal vent pipe outlets for storage tanks of Class I liquids
   a) shall be located outside buildings not less than
      i) 3.5 m above the adjacent ground level, and
      ii) 1.5 m from any building opening, and
   b) shall discharge so that flammable vapours will not enter the building or be trapped near any part
      of the building.

Exception:
   except as stated in
   - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
   - Sentence 4.1.1.1.(3), which applies to
     - the transportation of flammable liquids or combustible liquids under the "Transportation of
       Dangerous Goods Regulations",
     - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
     - the storage of flammable liquids or combustible liquids on farms for individual farm use and on
       isolated construction projects,
     - the storage of aerosol products covered under Subsection 3.2.5.,
     - liquefied petroleum gas-burning appliances and equipment within the scope of the gas
       regulations made pursuant to the Safety Codes Act,
     - the production, storage or handling of liquefied natural gas within the scope of the gas
       regulations made pursuant to the Safety Codes Act,
     - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash
       points but that may be flammable under certain conditions, and
     - the production, storage and handling of natural gas within the scope of the gas
       regulations made pursuant to the Safety Codes Act,
     - the storage and handling of raw production flammable liquids or combustible liquids and the
       incidental storage and handling of hydrocarbon-based chemicals resulting from or used during
       crude oil or natural gas exploration, production or transmission as mandated under the scope
       of EUB Guide 55,
   - Sentence 4.10.5.1.(1) and Clause 4.5.1.1.(2)(d), which apply to piping and pumping systems for
     distilled beverage alcohol at distilleries.

Application

A1. Location of normal vent piping outlets for aboveground storage tanks for Class I liquids, in
buildings, structures and open areas.

Exception:

 except as stated in
   - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
   - Sentence 4.1.1.1.(3), which applies to
     - the transportation of flammable liquids or combustible liquids under the "Transportation of
       Dangerous Goods Regulations",
     - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
     - the storage of flammable liquids or combustible liquids on farms for individual farm use and on
       isolated construction projects,
     - the storage of aerosol products covered under Subsection 3.2.5.,
     - liquefied petroleum gas-burning appliances and equipment within the scope of the gas
       regulations made pursuant to the Safety Codes Act,
     - the production, storage or handling of liquefied natural gas within the scope of the gas
       regulations made pursuant to the Safety Codes Act,
     - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash
       points but that may be flammable under certain conditions, and
     - the production, storage and handling of raw production flammable liquids or combustible liquids and the
       incidental storage and handling of hydrocarbon-based chemicals resulting from or used during
       crude oil or natural gas exploration, production or transmission as mandated under the scope
       of EUB Guide 55,
   - Sentence 4.10.5.1.(1) and Clause 4.5.1.1.(2)(d), which apply to piping and pumping systems for
     distilled beverage alcohol at distilleries.

Intent

I1. To limit the probability of the accumulation of vapour near buildings and its subsequent ignition
    by indoor or outdoor ignition sources, which could lead to harm to persons.

I2. To limit the probability of the release of vapour in buildings or its re-entry into buildings, which
    could lead to the accumulation and subsequent ignition of vapour, which could lead to harm to
    persons.
Application and intent of Division B provisions

Application
A1. Location of normal vent piping outlets for aboveground storage tanks for Class II or IIIA liquids, in buildings, structures and open areas.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.5.1.(1) and Clause 4.5.1.1.(2)(d), which apply to piping and pumping systems for distilled beverage alcohol at distilleries.

Intent
I1. To limit the probability of the accumulation of vapour near buildings and its subsequent ignition by outdoor ignition sources, which could lead to harm to persons.
I2. To limit the probability of the release of vapour in buildings or its re-entry into buildings, which could lead to the accumulation and subsequent ignition of vapour, which could lead to harm to persons.

A1. Manifolding and sizing of normal vent piping for 2 or more aboveground storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in:
  - Sentence 4.3.5.3.(2), which applies to the connection of vent pipes between tanks containing Class I liquids and Class II or IIIA liquids,
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Sentence 4.10.5.1.(1), which applies to distilled beverage alcohol at distilleries.

Application

1. To limit the probability that atmospheric temperature changes – or liquids entering or leaving the tank – will lead to excessive internal tank vacuum or pressure, which could lead to the failure of the tank, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Application

1. Manifolding and sizing of normal vent piping for 2 or more aboveground storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.3.5.3.(2), which applies to the connection of vent pipes between tanks containing Class I liquids and Class II or IIIA liquids,

2) Vent piping for storage tanks for Class I liquids shall not be connected to vent piping for storage tanks for Class II or IIIA liquids unless an effective arrangement is provided to prevent the vapours from the Class I liquids from entering the other tanks.

Application
A1. Manifolding of normal vent piping for aboveground storage tanks containing Class I liquids with vent piping for such tanks containing Class II or IIIA liquids, in buildings, structures and open areas.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- as provided in Sentence 4.10.5.1.(1), which applies to distilled beverage alcohol at distilleries.

Intent
11. To limit the probability of the contamination of Class II or IIIA liquid vapours with Class I liquid vapours, which could lead to the accumulation and subsequent ignition of vapour, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Shut-off valves on connections – through which liquid can normally flow – to aboveground storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception: except for vents, except as stated in:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to:
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries.

Application

A1. Shut-off valves on connections – through which liquid can normally flow – to aboveground storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception: except for vents, except as stated in:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to:
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries.

Intent

I1. To limit the probability that damage or malfunction of tank-associated piping will lead to the escape of liquid, which could lead to the spread of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Shut-off valves on connections – through which liquid can normally flow – to aboveground storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:

1) Each connection to an aboveground storage tank through which the liquid can normally flow shall be provided with an internal or external shut-off valve located as close as practical to the shell of the tank.

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries.

Application

F44-OP1.1

Attribution - functional statement/objective

1) Each connection to an aboveground storage tank through which the liquid can normally flow shall be provided with an internal or external shut-off valve located as close as practical to the shell of the tank.

Intent

II. To limit the probability that damage or malfunction of tank-associated piping will lead to the escape of liquid, which could lead to the spread of liquid, which could lead to the ignition of vapour, which could lead to a fire or explosion, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

1) Each connection to an aboveground storage tank through which the liquid can normally flow shall be provided with an internal or external shut-off valve located as close as practical to the shell of the tank.

Application

A1. Shut-off valves on connections – through which liquid can normally flow – to aboveground storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:

except for vents, except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries.

Intent

I1. To limit the probability that damage or malfunction of tank-associated piping will lead to the escape of liquid, which could lead to the spread of liquid, which could lead to the ignition of vapour, which could lead to a fire or explosion, which could lead to harm to persons.
Application and intent of Division B provisions

Application

A1. Shut-off valves on connections – through which liquid does not normally flow – to aboveground storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:
- except for vents,
- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
    - the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries.

Intent

I1. To limit the probability that damage or malfunction of tank-associated piping will lead to the escape of liquid, which could lead to the spread of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

A1. Shut-off valves on connections — through which liquid does not normally flow — to aboveground storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:

- except for vents,
- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
    - the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries.

Intent

I1. To limit the probability that damage or malfunction of tank-associated piping will lead to the escape of liquid, which could lead to the spread of liquid, which could lead to the ignition of vapour, which could lead to a fire or explosion, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

[CodeReference] 4.3.6.1.(2)-03
[Attribution] functional statement/objective

2) Each connection to an aboveground storage tank that is below the liquid level and through which liquid does not normally flow shall be provided with a liquid-tight closing device.

A1. Shut-off valves on connections – through which liquid does not normally flow – to aboveground storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas.

Application

Exception:

except for vents, except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”;
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries.

Intent

I1. To limit the probability that damage or malfunction of tank-associated piping will lead to the escape of liquid, which could lead to the spread of liquid, which could lead to the ignition of vapour, which could lead to a fire or explosion, which could lead to harm to persons.

CodeText

1) Valves and their connections to a storage tank shall be made of steel, except that when the chemical characteristics of the liquid stored are incompatible with steel, materials other than steel are permitted to be used.

Application

A1. Steel for valves and their connections to aboveground storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:

except where the chemical characteristics of the liquid are incompatible with steel, except for vent pipe connections, except as stated in

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.5.1.(1), which applies to distilled beverage alcohol at distilleries.

Intent

I1. To limit the probability that the inability of valves or connections to resist stresses, impacts or high temperatures created by a fire exposure will lead to the failure of the valves or connections, which could lead to the escape of liquid from the tank, which could lead to harm to the public.
Application and intent of Division B provisions

Application

A1. Steel for valves and their connections to aboveground storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:

except where the chemical characteristics of the liquid are incompatible with steel, except for vent pipe connections, except as stated in

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.5.1.(1), which applies to distilled beverage alcohol at distilleries.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Material of valves and their connections to aboveground storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception: except where the chemical characteristics of the liquid are incompatible with steel, except for vent pipe connections, except as stated in:

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.5.1.(1), which applies to distilled beverage alcohol at distilleries.

I1. To remove the requirement to use steel if the chemical characteristics of the liquid are incompatible with steel in such a manner that using steel would

- lead to a fire or explosion hazard, or
- lead to premature failure of the valves or connections.

2) Materials for valves and their connections to a storage tank shall be suitable for the pressures, stresses and temperatures that may be expected, including those of possible fire exposure.

Application
A1. Material for valves and their connections to aboveground storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:
except for vent pipe connections,
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.5.1.(1), which applies to distilled beverage alcohol at distilleries.

Intent
1. To limit the probability that the inability of valves or connections to resist pressures, stresses, impacts or temperatures created by normal and fire exposure conditions will lead to the failure of the valves or connections, which could lead to the escape of liquid from the tank, which could lead to the ignition of vapour, which could lead to a fire or explosion, which could lead to harm to persons.
Application and intent of Division B provisions

Application

A1. Material, suitable for the pressures, stresses and temperatures that may be expected, for valves and their connections to aboveground storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:

except for vent pipe connections, except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.5.1.(1), which applies to distilled beverage alcohol at distilleries.

Intent

II. To limit the probability that the inability of valves or connections to resist pressures, stresses, impacts or temperatures created by normal and fire exposure conditions will lead to the failure of the valves or connections, which could lead to the escape of liquid from the tank, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Caps or covers for openings used to measure liquid levels for aboveground storage tanks for Class I liquids, in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.5.1.(1), which applies to distilled beverage alcohol at distilleries.

Intent
I1. To limit the probability that liquid or vapour will escape through the opening, which could lead to the ignition of vapour, which could lead to a fire or explosion, which could lead to harm to persons.
I2. To limit the probability of tampering or entry of foreign objects into the tank, which could lead to the ignition of vapour, which could lead to a fire or explosion, which could lead to harm to persons.
I3. To limit the probability of entry of precipitation into the tank, which could lead to the escape of liquid, which could lead to the ignition of vapour, which could lead to a fire or explosion, which could lead to harm to persons.
Application and intent of Division B provisions

1) Openings for measuring liquid levels in storage tanks for Class I liquids shall be equipped with caps or covers which shall be opened only when measuring the liquid level.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.5.1.(1), which applies to distilled beverage alcohol at distilleries.

Intent

I1. To limit the probability that liquid will escape through the opening, which could lead to harm to the public.

I2. To limit the probability of tampering or entry of foreign objects into the tank, which could lead to the escape of liquid, which could lead to harm to the public.

I3. To limit the probability of the entry of precipitation into the tank, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Application

A1. Location, away from buildings and sources of ignition, of connections used as part of normal operating conditions for filling or emptying aboveground storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:

except as stated in
- Sentence 4.3.6.4.(3), which applies to filling connections for special processes or the collection of used liquids,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.5.1.(1), which applies to distilled beverage alcohol at distilleries.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Location, away from buildings and building openings, of connections used as part of normal operating conditions for filling or emptying aboveground storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:

- except as stated in Sentence 4.3.6.4.(3), which applies to filling connections for special processes or the collection of used liquids,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.5.1.(1), which applies to distilled beverage alcohol at distilleries.

Intent

I1. To limit the probability of the release of vapour in – or the re-entry of vapour into – the building, which could lead to the accumulation and subsequent ignition of vapour, which could lead to harm to persons in the building.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Closure of connections for filling or emptying aboveground storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.5.1.(1), which applies to distilled beverage alcohol at distilleries.

2) Connections for filling or emptying storage tanks shall be kept closed to prevent leakage when not in use.

Application

A1. Closure of connections for filling or emptying aboveground storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Sentence 4.10.5.1.(1), which applies to distilled beverage alcohol at distilleries.

Intent

I1. To limit the probability that liquid or vapour will escape through the opening, which could lead to the ignition of vapour, which could lead to a fire or explosion, which could lead to harm to persons.

I2. To limit the probability of tampering or entry of foreign objects into the tank, which could lead to the ignition of vapour, which could lead to a fire or explosion, which could lead to harm to persons.

I3. To limit the probability of entry of precipitation into the tank, which could lead to the escape of liquid, which could lead to the ignition of vapour, which could lead to a fire or explosion, which could lead to harm to persons.

2) Connections for filling or emptying storage tanks shall be kept closed to prevent leakage when not in use.

Application

A1. Closing of connections for filling or emptying aboveground storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.5.1.(1), which applies to distilled beverage alcohol at distilleries.

Intent

I1. To limit the probability that liquid will escape through the opening, which could lead to harm to the public.
I2. To limit the probability of tampering or entry of foreign objects into the tank, which could lead to the escape of liquid, which could lead to harm to the public.
I3. To limit the probability of entry of precipitation into the tank, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Location of connections used as part of normal operating conditions for filling aboveground storage tanks for flammable liquids and combustible liquids, in buildings, structures or open areas

- the tanks are directly associated to a process or activity located indoors, or are used for the collection of used liquids, and
- the fill piping is provided with means to prevent flammable vapours from returning to the building.

Exception:

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.5.1.(1), which applies to distilled beverage alcohol at distilleries.

Application

A1. Location of connections used as part of normal operating conditions for filling aboveground storage tanks for flammable liquids and combustible liquids, in buildings, structures or open areas

- the tanks are directly associated to a process or activity located indoors, or are used for the collection of used liquids, and
- the fill piping is provided with means to prevent flammable vapours from returning to the building.

Exception:

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.5.1.(1), which applies to distilled beverage alcohol at distilleries.

Intent

I1. To remove the requirement in Sentence 4.3.6.4.(1) for filling connections to be located outdoors if the tank has a certain use [collection of used liquids] or indoor association, and if measures are taken to limit the probability of vapour accumulation in the building, which could lead to a fire or explosion, which could lead to harm to persons.
A1. Spill control measures for aboveground storage tanks – and portable tanks that have a capacity greater than 2,500 L [as stated in Sentence 4.2.1.1.(3)] – for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.5.1.(1), which applies to distilled beverage alcohol at distilleries.

I1. To direct Alberta Fire Code 2006 users to Subsection 4.1.6.
Application and intent of Division B provisions

Application

A1. Secondary spill containment for aboveground storage tanks – and portable tanks that have a capacity greater than 2,500 L [as stated in Sentence 4.2.1.1.(3)] – for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.5.1.(1) and Subsection 4.10.3., which apply to distilled beverage alcohol at distilleries.

Intent

I1. To state part of the application of Subsection 4.3.7.
A1. Aboveground storage tanks that have a capacity not greater than 50,000 L for flammable liquids and combustible liquids, in buildings, structures and open areas, and where the tanks - conform to one of the ULC standards listed in Clause 4.3.7.4.(2)(a) and incorporate secondary spill containment,
- are protected by a physical barrier when exposed to collision damage, and
- are used and maintained in conformance with Articles 4.3.7.8. and 4.3.7.9.

Exception:
except as stated in
- Sentence 4.3.7.4.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.5.1.(1) and Subsection 4.10.3., which apply to distilled beverage alcohol at distilleries.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Design, construction and maintenance [to withstand full hydrostatic head, and b) provide a permeability of not more than $10^{-6}$ cm/s to the flammable liquids or combustible liquids contained in the storage tanks.

Exception:
- except as stated in Sentence 4.2.1.1.3, which applies to unique hazards in process plants,
- the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”;
- appliances and their ancillary equipment within the scope of CAN/CSA-B139;
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.1.1.2 and Subsection 4.10.3., which apply to distilled beverage alcohol at distilleries.

Application

1) Except as provided in Sentence (2), the base and walls of a secondary containment shall be made of noncombustible materials, and shall be designed, constructed and maintained to a) withstand full hydrostatic head, and b) provide a permeability of not more than $10^{-6}$ cm/s to the flammable liquids or combustible liquids contained in the storage tanks.

Exception:
- except as stated in Sentence 4.1.1.1.2, which applies to unique hazards in process plants,
- Sentence 4.1.1.1.3, which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”;
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.1.1.2 and Subsection 4.10.3., which apply to distilled beverage alcohol at distilleries.

Intent

I. To limit the probability that the inability of the secondary containment to resist the hydrostatic load of the liquid it holds will lead to failure of the secondary containment, which could lead to the escape and spread of liquid outside of the secondary containment, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Design, construction and maintenance [to withstand full hydrostatic head, and]
b) provide a permeability of not more than $10^{-6}$ cm/s to the flammable liquids or combustible liquids contained in the storage tanks.

Exception:

- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.1.1.(2) and Subsection 4.10.3., which apply to distilled beverage alcohol at distilleries.

I1. To limit the probability that the inability of the secondary containment to resist the hydrostatic load of the liquid it holds will lead to failure of the secondary containment, which could lead to the escape and spread of liquid outside of the secondary containment, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Design, construction and maintenance [to control permeability] of bases and walls of secondary spill containments for aboveground storage tanks – and portable tanks that have a capacity greater than 2,500 L [as stated in Sentence 4.2.1.1.(3)] – for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in:
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Sentence 4.10.1.1.(2) and Subsection 4.10.3., which apply to distilled beverage alcohol at distilleries.

I1. To limit the probability of liquid seepage through the secondary containment, which could lead to the escape and spread of liquid outside of the secondary containment, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Design, construction and maintenance (to control permeability) of bases and walls of secondary spill containments for aboveground storage tanks – and portable tanks that have a capacity greater than 2,500 L [as stated in Sentence 4.2.1.1.(3)] – for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.1.1.(2) and Subsection 4.10.3., which apply to distilled beverage alcohol at distilleries.

I1. To limit the probability of liquid seepage through the secondary containment, which could lead to the escape and spread of liquid outside of the secondary containment, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Design, construction, and maintenance [to control permeability] of bases and walls of secondary spill containment for aboveground storage tanks – and portable tanks that have a capacity greater than 2 500 L [as stated in Sentence 4.2.1.1.(3)] – for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in – Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.2.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,

Intent

I1. To limit the probability that fire exposure will lead to failure of the secondary containment, which could lead to the escape and spread of liquid outside of the secondary containment, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Combustible liner membranes used for secondary spill containment for aboveground storage tanks – and portable tanks that have a capacity greater than 2 500 L [as stated in Sentence 4.2.1.1. (3)] – for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”, - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.1.1.(2) and Subsection 4.10.3., which apply to distilled beverage alcohol at distilleries.

I1. To remove the requirement in Sentence 4.3.7.2.(1) for secondary containment to be made of noncombustible materials if the membrane has a low flame-spread rating when tested in conformance with ULC/ORD-CS8.9 and the membrane is protected against failure due to fire exposure by a thermal barrier.

This is to limit the probability of the escape and spread of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

CodeReference (including record number) F44-OS1.1.1
Attribution - functional statement/objective 4.3.7.2-(2)-02

CodeText

2) Where a membrane provides the level of impermeability required in Sentence (1), it shall:
   a) conform to ULC/ORD-C58.9, “Secondary Containment Liners for Underground and Aboveground Flammable and Combustible Liquid Tanks,” and
   b) when the membrane is combustible, be covered with a noncombustible material of such nature and thickness that the membrane will not fail when the secondary containment is exposed to fire.

Application

A1. Combustible liner membranes used for secondary spill containment for aboveground storage tanks and portable tanks that have a capacity greater than 2,500 L [as stated in Sentence 4.2.1.1.(3)] – for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:
   except as stated in
   - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
   - Sentence 4.1.1.1.(3), which applies to
   - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
   - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
   - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
   - the storage of aerosol products covered under Subsection 3.2.5.,
   - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
   - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
   - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
   - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
   - Sentence 4.10.1.1.(2) and Subsection 4.10.3., which apply to distilled beverage alcohol at distilleries.

Intent

I1. To remove the requirement in Sentence 4.3.7.2.(1) for secondary containment to be made of noncombustible materials if the membrane has a low flame-spread rating when tested in conformance with ULC/ORD-C58.9 and the membrane is protected against failure due to fire exposure by a thermal barrier.

This is to limit the probability of the escape and spread of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
A1. Openings in secondary spill containments for aboveground storage tanks – and portable tanks that have a capacity greater than 2 500 L [as stated in Sentence 4.2.1.1.(3)] – for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in - Sentence 4.3.7.2.(4), which applies to openings for piping,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.1.1.(2) and Subsection 4.10.3., which apply to distilled beverage alcohol at distilleries.

I1. To limit the probability of leakage through the secondary containment openings, which could lead to the escape and spread of liquid outside of the secondary containment, which could lead to harm to the public.
A1. Openings in secondary spill containments for aboveground storage tanks and portable tanks that have a capacity greater than 2 500 L [as stated in Sentence 4.2.1.1.(3)] – for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:

- except as stated in Sentence 4.3.7.2.(4), which applies to openings for piping,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.1.1.(2) and Subsection 4.10.3., which apply to distilled beverage alcohol at distilleries.

I1. To limit the probability of leakage through the secondary containment openings, which could lead to the escape and spread of liquid outside of the secondary containment, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Openings in secondary spill containments for aboveground storage tanks – and portable tanks that have a capacity greater than 2 500 L [as stated in Sentence 4.2.1.1.(3)] – for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:

- except as stated in Sentence 4.3.7.2.(4), which applies to openings for piping,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.1.1.(2) and Subsection 4.10.3., which apply to distilled beverage alcohol at distilleries.

Attribution - functional statement/objective Not applicable

CodeText

4) Where piping passes through a secondary containment, such passages shall conform to Sentences (1) and (2).

Application

A1. Passages for piping through secondary spill containment for aboveground storage tanks – and portable tanks that have a capacity greater than 2,500 L [as stated in Sentence 4.2.1.1.(3)] – for flammable liquids and combustible liquids, in buildings, structures and open areas and where the openings around the piping are sealed to the same standards as the containment itself.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”;
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
- Sentence 4.10.1.1.(2) and Subsection 4.10.3., which apply to distilled beverage alcohol at distilleries.

Intent

I1. To remove the prohibition in Sentence 4.3.7.2.(3) and permit openings, only if they are for the passage of piping and are sealed to the same standards as the containment itself.

I2. To clarify the application of Sentences 4.3.7.2.(1) and 4.3.7.2.(2) to seals around openings for the passage of piping.
Application and intent of Division B provisions

A1. Minimum capacity of secondary spill containment for any single aboveground storage tank or portable tank that has a capacity greater than 2 500 L [as stated in Sentence 4.2.1.1.(3)] for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in Clauses 4.3.12.7.(1)(a) and 4.3.13.1.(1)(a), which apply when indoors,
- Sentence 4.3.7.3.(3), which applies when the secondary containment is designed to prevent the entry of precipitation and water used for firefighting into the contained space,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.1.1.(2) and Subsection 4.10.3., which apply to distilled beverage alcohol at distilleries.

Intent
I1. To limit the probability of overtopping (overflowing) of the spill containment area, which could lead to the escape and spread of liquid outside of the secondary containment, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Minimum capacity of secondary spill containment for any single aboveground storage tank or portable tank that has a capacity greater than 2 500 L [as stated in Sentence 4.2.1.1.(3)] for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:

- except as stated in
  - Clauses 4.3.12.7.1(a) and 4.3.13.1.1(a), which apply when indoors,
  - Sentence 4.3.7.3.(3), which applies when the secondary containment is designed to prevent the entry of precipitation and water used for firefighting into the contained space,
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
    - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Sentence 4.10.1.1.(2) and Subsection 4.10.3., which apply to distilled beverage alcohol at distilleries.

Intent

I1. To limit the probability of overtopping [overflowing] of the spill containment area, which could lead to the escape and spread of liquid outside of the secondary containment, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Minimum capacity of secondary spill containment for any single aboveground storage tank or portable tank that has a capacity greater than 2 500 L [as stated in Sentence 4.2.1.1.(3)] for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:

except as stated in
- Clauses 4.3.12.7.(1)(a) and 4.3.13.1.(1)(a), which apply when indoors,
- Sentence 4.3.7.3.(3), which applies when the secondary containment is designed to prevent the entry of precipitation and water used for firefighting into the contained space,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.1.1.(2) and Subsection 4.10.3., which apply to distilled beverage alcohol at distilleries.

Intent

I1. To limit the probability of overtopping [overflowing] of the spill containment area, which could lead to the escape and spread of liquid outside of the secondary containment, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

CodeText

2) Except as permitted in Sentence (3), a secondary containment for more than one storage tank shall have a volumetric capacity of not less than the sum of:

a) the capacity of the largest storage tank located in the contained space, and

b) 10% of the greater of:

i) the capacity specified in Clause (a), or

ii) the aggregate capacity of all other storage tanks located in the contained space.

Application

A1. Minimum capacity of secondary spill containment for any combination of two or more aboveground storage tanks – or portable tanks that have a capacity greater than 2,500 L [as stated in Sentence 4.2.1.1.3] – for flammable liquids and combustible liquids located in the same contained space, in buildings, structures and open areas.

Exception:

- except as stated in Clauses 4.3.12.7.1(a) and 4.3.13.1.1(a), which apply when indoors,
- Sentence 4.3.7.3.(3), which applies when the secondary containment is designed to prevent the entry of precipitation and water used for firefighting into the contained space,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to:
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.1.1.(2) and Subsection 4.10.3., which apply to distilled beverage alcohol at distilleries.

A1. Minimum clearance [spatial distance] between secondary containment walls and the shell of aboveground storage tanks – or portable tanks that have a capacity greater than 2 500 L [as stated in Sentence 4.2.1.1.(3)] – for flammable liquids and combustible liquids located in the containment space, in buildings, structures and open areas.

Exception: except as stated in:
- Sentences 4.3.7.4.(2) and (3), which waive the minimum distance requirement,
- Sentence 4.3.7.4.(2), which applies to certain constructed, sized and protected tanks,
- Sentence 4.3.13.2.(1), which applies to indoor dedicated storage rooms,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.1.1.(2) and Subsection 4.10.3., which apply to distilled beverage alcohol at distilleries.

Intent

I. To limit the probability of vapour accumulation in the contained space, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.

II. To limit the probability of delays or ineffectiveness in firefighting efforts, which could lead to the spread of fire beyond the point of fire origin, which could lead to damage to the building or facility.

III. To limit the probability that a tank defect or leak from the tank will go unnoticed, which could lead to the escape and spread of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Minimum clearance [spatial distance] between secondary containment walls and the shell of aboveground storage tanks – or portable tanks that have a capacity greater than 2 500 L [as stated in Sentence 4.2.1.1.(3)] – for flammable liquids and combustible liquids located in the containment space, in buildings, structures and open areas.

Exception:
- except as stated in Sentences 4.3.7.4.(2) and (3), which waive the minimum distance requirement,
- Sentence 4.3.7.4.(2), which applies to certain constructed, sized and protected tanks,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.1.1.(2) and Subsection 4.10.3., which apply to distilled beverage alcohol at distilleries.

Intent

I1. To limit the probability of vapour accumulation in the contained space, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
I2. To limit the probability of delays or ineffectiveness in firefighting efforts, which could lead to the spread of fire beyond the point of fire origin, which could lead to harm to persons.
I3. To limit the probability that a tank defect or leak from the tank will go unnoticed, which could lead to the escape and spread of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

2) It is permitted to waive the distance required in Sentence (1) provided the storage tank
a) is constructed in accordance with Clauses 4.3.1.2.(1)(j), (k), (m) and (o) incorporating secondary
containment,

b) has a capacity of not more than 50 000 L, and

c) is protected by posts or guardrails where exposed to collision damage.

Application

A1. Waiver of minimum clearance [spatial distance], required by Sentence 4.3.7.4.(1) between
secondary containment walls and the shell of aboveground storage tanks – or portable tanks that
have a capacity greater than 2 500 L [as stated in Sentence 4.2.1.1.(3)] – for flammable liquids and
combustible liquids located in the containment space, in buildings, structures and open areas, and
where the tanks:

- are constructed in accordance with Clauses 4.3.1.2.(1)(g), 4.3.1.2.(1)(h), 4.3.1.2.(1)(j), or 4.3.1.2.
(1)(o) incorporating secondary containment,

- have a capacity of not more than 50 000 L, and

- are protected by posts or guardrails when exposed to collision damage.

Exception:
except as stated in

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,

- Sentence 4.1.1.1.(3), which applies to

  - the transportation of flammable liquids or combustible liquids under the "Transportation of
    Dangerous Goods Regulations",

  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,

  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on
    isolated construction projects,

  - the storage of aerosol products covered under Subsection 3.2.5.,

  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas
    regulations made pursuant to the Safety Codes Act,

  - the production, storage or handling of liquefied natural gas within the scope of the gas
    regulations made pursuant to the Safety Codes Act,

  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash
    points but that may be flammable under certain conditions, and

  - the storage and handling of raw production flammable liquids or combustible liquids and the
    incidental storage and handling of hydrocarbon-based chemicals resulting from or used during
    crude oil or natural gas exploration, production or transmission as mandated under the scope
    of EUB Guide 55,

  - Sentence 4.10.1.1.(2) and Subsection 4.10.3., which apply to distilled beverage alcohol at
distilleries.

Intent

I1. To waive the clearance required in Sentence 4.3.7.4.(1) for certain constructed, sized and
protected tanks that limit the probability of the escape of liquid, which could lead to harm to the
public.
A1. Waiver of minimum clearance [spatial distance], required by Sentence 4.3.7.4.(1) between secondary containment walls and the shell of aboveground storage tanks – or portable tanks that have a capacity greater than 2 500 L [as stated in Sentence 4.2.1.1.(3)] – for flammable liquids and combustible liquids located in the containment space, in buildings, structures and open areas, and where the tanks:

2) It is permitted to waive the distance required in Sentence (1) provided the storage tank
a) is constructed in accordance with Clauses 4.3.1.2.(1)(j), (k), (m) and (o) incorporating secondary
containment,

b) has a capacity of not more than 50 000 L, and

c) is protected by posts or guardrails where exposed to collision damage.

Application

A1. Waiver of minimum clearance [spatial distance], required by Sentence 4.3.7.4.(1) between
secondary containment walls and the shell of aboveground storage tanks – or portable tanks that
have a capacity greater than 2 500 L [as stated in Sentence 4.2.1.1.(3)] – for flammable liquids and
combustible liquids located in the containment space, in buildings, structures and open areas, and
where the tanks:

- are constructed in accordance with Clauses 4.3.1.2.(1)(g), 4.3.1.2.(1)(h), 4.3.1.2.(1)(j), or 4.3.1.2.
(1)(o) incorporating secondary containment,

- have a capacity of not more than 50 000 L, and

- are protected by posts or guardrails when exposed to collision damage.

Exception:

except as stated in

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,

- Sentence 4.1.1.1.(3), which applies to

  - the transportation of flammable liquids or combustible liquids under the “Transportation of
Dangerous Goods Regulations”,

  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,

  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on
isolated construction projects,

  - the storage of aerosol products covered under Subsection 3.2.5.,

  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas
regulations made pursuant to the Safety Codes Act,

  - the production, storage or handling of liquefied natural gas within the scope of the gas
regulations made pursuant to the Safety Codes Act,

  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash
points but that may be flammable under certain conditions, and

  - the storage and handling of raw production flammable liquids or combustible liquids and the
incidental storage and handling of hydrocarbon-based chemicals resulting from or used during
crude oil or natural gas exploration, production or transmission as mandated under the scope of
EUB Guide 55,

  - Sentence 4.10.1.1.(2) and Subsection 4.10.3., which apply to distilled beverage alcohol at
distilleries.

Intent

I1. To waive the clearance required in Sentence 4.3.7.4.(1) for certain constructed, sized and
protected tanks that limit the probability of the escape of liquid, which could lead to the ignition of
vapour from a nearby ignition source, which could lead to harm to persons.

3) It is permitted to waive the distance required in Sentence (1) provided the storage tank:
   a) is constructed in accordance with Clauses 4.3.1.2.(1)(b) and (g), for double-walled storage tanks;
   b) is equipped with a spill containment device meeting the requirements of ULC/ORD-C142.19, "Spill Containment Devices for Aboveground Flammable and Combustible Liquid Storage Tanks,"
   c) is equipped with an overfill protection device that is compatible with the intended method of filling and meets the requirements of ULC/ORD-C58.15, "Overfill Protection Devices for Flammable Liquid Storage Tanks,"
   d) is provided with a metallic under-dispenser sump meeting the requirements of ULC/ORD-C107.21, "Under-Dispenser Sumps," if the assembly incorporates a fuel dispenser,
   e) is provided with a means of detecting leakage within the interstitial space,
   f) is inspected every 7 days for any loss if equipped with vacuum gauges that monitor the interstitial space,
   g) has a capacity of not more than 50 000 L,
   h) has all piping connections made above the normal maximum liquid level,
   i) has a means to prevent the release of flammable liquids and combustible liquids by siphon flow,
   j) has a means for determining the level of flammable liquids and combustible liquids that is readily accessible to the delivery operator, and
   k) is protected by posts or guardrails where exposed to collision damage.

Exception:

- except as stated in
  - Sentence 4.1.1.1.2.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Sentence 4.10.1.1.2 and Subsection 4.10.3., which apply to distilled beverage alcohol at distilleries.

Application

A1. Waiver of minimum clearance [spatial distance], required by Sentence 4.3.7.4.(1) between secondary containment walls and the shell of aboveground storage tanks – or portable tanks that have a capacity greater than 2 500 L [as stated in Sentence 4.2.1.1.(3)] – for flammable liquids and combustible liquids located in the containment space, in buildings, structures and open areas, provided the tank
   - is constructed in accordance with Clauses 4.3.1.2.(1)(b) and (d), for double walled storage tanks,
   - has a capacity of not more than 50 000 L,
   - is protected by posts or guardrails when exposed to collision damage,
   - is equipped with a spill containment device,
   - is equipped with an overflow protection device,
   - is provided with a metallic under-dispenser pump,
   - is provided with means for detecting leakage within the interstitial space,
   - has all piping connections made above the normal maximum liquid level,
   - has a means to prevent the release of flammable liquids and combustible liquids by siphon flow, and
   - has a means to determine the level of flammable liquids and combustible liquids that is readily accessible to the delivery operator.

A1. Access to aboveground storage tanks [and their valves and ancillary equipment] – and to portable tanks that have a capacity greater than 2 500 L [as stated in Sentence 4.2.1.1.(3)] – for flammable liquids and combustible liquids located in secondary containment spaces, in buildings, structures and open areas.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.1.1.(2) and Subsection 4.10.3., which apply to distilled beverage alcohol at distilleries.

I1. To limit the probability of restricted access to tanks, valves and ancillary equipment in the containment space by employees for normal operation, maintenance or inspection, which could lead to defects or liquid escape going unnoticed, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.

I2. To limit the probability of restricted access to tanks, valves and ancillary equipment in the containment space by emergency responders, which could lead to delays or impediment of their operations, which could lead to the spread of fire beyond the point of fire origin, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeText

1) A secondary containment shall permit
   a) access to storage tanks, valves and ancillary equipment,
   b) egress from the contained space, and
   c) access for firefighting as specified in Article 4.3.2.4.
   (See Appendix A.)

Application

A1. Access to aboveground storage tanks [and their valves and ancillary equipment] – and to portable tanks that have a capacity greater than 2 500 L (as stated in Sentence 4.2.1.1.(3)) – for flammable liquids and combustible liquids located in secondary containment spaces, in buildings, structures and open areas.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
- the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.1.1.(2) and Subsection 4.10.3., which apply to distilled beverage alcohol at distilleries.

Intent

I1. To limit the probability of restricted access to tanks, valves and ancillary equipment in the containment space by employees for normal operation, maintenance or inspection, which could lead to defects or liquid escape going unnoticed, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.

I2. To limit the probability of restricted access to tanks, valves and ancillary equipment in the containment space by emergency responders, which could lead to delays or impediment of their operations, which could lead to the spread of fire beyond the point of fire origin, which could lead to harm to persons.
Application and intent of Division B provisions

Application

A1. Access to aboveground storage tanks (and their valves and ancillary equipment) – and to portable tanks that have a capacity greater than 2 500 L (as stated in Sentence 4.2.1.1.(3)) – for flammable liquids and combustible liquids located in secondary containment spaces, in buildings, structures and open areas.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.1.1.(2) and Subsection 4.10.3., which apply to distilled beverage alcohol at distilleries.

Intent

I1. To limit the probability of restricted access to tanks, valves and ancillary equipment in the containment space by employees for normal operation, maintenance or inspection, which could lead to defects or liquid escape going unnoticed, which could lead to harm to the public.

I2. To limit the probability of restricted access to tanks, valves and ancillary equipment in the containment space by emergency responders, which could lead to delays or impediment of their operations, which could lead to the spread of liquid beyond the point of liquid origin, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Egress from secondary containment spaces used for aboveground storage tanks [and their valves and ancillary equipment] – and to portable tanks that have a capacity greater than 2 500 L [as stated in Sentence 4.2.1.1.(3)] – for flammable liquids and combustible liquids located in secondary containment spaces, in buildings, structures and open areas.

Exception:

- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.1.1.(2) and Subsection 4.10.3., which apply to distilled beverage alcohol at distilleries.

Intent

I1. To limit the probability that egress of emergency responders from the secondary containment will be restricted in a fire situation, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Egress from secondary containment spaces used for aboveground storage tanks [and their valves and ancillary equipment] – and for portable tanks that have a capacity greater than 2 500 L [as stated in Sentence 4.2.1.1.(3)] – for flammable liquids and combustible liquids located in secondary containment spaces, in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.1.1.(2) and Subsection 4.10.3., which apply to distilled beverage alcohol at distilleries.

I1. To limit the probability of restricting egress of emergency responders from the contained space in the event of the escape of liquid from the tank into the secondary containment area, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

**CodeText**

1) A secondary containment shall permit

a) access to storage tanks, valves and ancillary equipment,

b) egress from the contained space, and

c) access for firefighting as specified in Article 4.3.2.4.

(See Appendix A.)

**Application**

A1. Access for fire fighting to aboveground storage tanks and to portable tanks that have a capacity greater than 2,500 L [as stated in Sentence 4.2.1.1.(3)] for flammable liquids and combustible liquids located in secondary containment spaces, in buildings, structures and open areas.

Exception:

- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.1.1.(2) and Subsection 4.10.3., which apply to distilled beverage alcohol at distilleries.

**Intent**

I1. To limit the probability of restricted emergency responder access to tanks in the containment, which could lead to delays or ineffectiveness in conducting firefighting operations, which could lead to the spread of fire beyond the point of fire origin, which could lead to damage to the building or facility.
A1. Access for fire fighting to aboveground storage tanks and their valves and ancillary equipment, and to portable tanks that have a capacity greater than 2 500 L as stated in Sentence 4.2.1.1.(3) – for flammable liquids and combustible liquids located in secondary containment spaces, in buildings, structures and open areas.

Intent

I1. To limit the probability of restricted emergency responder access to tanks in the containment, which could lead to delays or ineffectiveness in conducting firefighting operations, which could lead to the spread of fire beyond the point of fire origin, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

1. Access for the normal operation of valves and for the roof of aboveground storage tanks located in secondary containment spaces for Class I liquids, in buildings, structures and open areas, where

- the average height of the secondary containment exceeds 3.5 m, measured from the ground level of the interior of the contained area, or
- the distance between the tank shell and the top inside edge of the secondary containment wall is less than the height of this wall.

(See Appendix A.)

Exception:

except as stated in

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.1.1.(2) and Subsection 4.10.3., which apply to distilled beverage alcohol at distilleries.

Intent

1. To limit the probability of delays or inefficiencies in controlling the escape of liquids from tanks, which could lead to the spread of liquid beyond the point of liquid origin, which could lead to harm to the public.
Application and intent of Division B provisions

CodeReference (including record number) 4.3.7.5.(2)-02

- Sentence 4.10.1.1.(2) and Subsection 4.10.3., which apply to distilled beverage alcohol at distilleries.

Intent

I1. To limit the probability of delays or inefficiencies in controlling the escape of liquids from tanks, which could lead to the spread of liquid beyond the point of liquid origin, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

4.3.7.5.(2)-03

Application

A1. Access for the normal operation of valves and for the roof of aboveground storage tanks located in secondary containment spaces for Class I liquids, in buildings, structures and open areas, where
- the average height of the secondary containment exceeds 3.5 m, measured from the ground level of the interior of the contained area, or
- the distance between the tank shell and the top inside edge of the secondary containment wall is less than the height of this wall.

Exception:

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.1.1.(2) and Subsection 4.10.3., which apply to distilled beverage alcohol at distilleries.

Intent

I1. To limit the probability of delays or inefficiencies in controlling the escape of liquids from tanks, which could lead to the spread of liquid beyond the point of liquid origin, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Emergency venting of secondary containment not open to the atmosphere for aboveground storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:

- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.1.1.(2) and Subsection 4.10.3., which apply to distilled beverage alcohol at distilleries.

I1. To limit the probability that exposure to fire will lead to excessive internal pressure in the contained space, which could lead to the failure of the tank assembly, which could lead to the escape and spread of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Application

A1. Emergency venting of secondary containment not open to the atmosphere for aboveground storage tanks for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:

- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.1.1.(2) and Subsection 4.10.3., which apply to distilled beverage alcohol at distilleries.

Intent

I1. To limit the probability that exposure to fire will lead to excessive internal pressure in the contained space, which could lead to the failure of the tank assembly, which could lead to the escape and spread of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

Application

A1. Monitoring for leaks or loss of integrity of secondary containment space not accessible for visual examination, for aboveground storage tanks – and portable tanks that have a capacity greater than 2,500 L [as stated in Sentence 4.2.1.1.(3)] – for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.1.1.(2) and Subsection 4.10.3., which apply to distilled beverage alcohol at distilleries.

Intent

I1. To limit the probability that the escape of liquid from the tank or the failure of the secondary containment will remain unnoticed, which could lead to appropriate measures not being taken, which could lead to the escape of liquid outside of the containment, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Monitoring for leaks or loss of integrity of secondary containment space not accessible for visual examination, for aboveground storage tanks – and portable tanks that have a capacity greater than 2,500 L [as stated in Sentence 4.2.1.1.(3)] – for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.1.1.(2) and Subsection 4.10.3., which apply to distilled beverage alcohol at distilleries.

Intent

I1. To limit the probability that the escape of liquid from the tank or the failure of the secondary containment will remain unnoticed, which could lead to appropriate measures not being taken, which could lead to the escape of liquid outside of the containment, which could lead to the ignition of vapour by a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.1.1.(2) and Subsection 4.10.3., which apply to distilled beverage alcohol at distilleries.

Intent

I1. To limit the probability that the escape of liquid from the tank or the failure of the secondary containment will remain unnoticed, which could lead to appropriate measures not being taken, which could lead to the escape of liquid outside of the containment, which could lead to the ignition of vapour by a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Accumulation of liquids, debris and precipitation in contained spaces created by a secondary containment for aboveground storage tanks – and portable tanks that have a capacity greater than 2,500 L [as stated in Sentence 4.2.1.1.(3)] – for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:
   - except as stated in
     - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
     - Sentence 4.1.1.1.(3), which applies to
       - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
       - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
       - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
       - the storage of aerosol products covered under Subsection 3.2.5.,
       - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
       - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
       - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
       - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
     - Sentence 4.10.1.1.(2) and Subsection 4.10.3., which apply to distilled beverage alcohol at distilleries.

Intent

I1. To limit the probability of reduced holding capacity or unavailability of the containment in an emergency, which could lead to the escape of liquid outside of the spill containment, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

Application

A1. Accumulation of liquids, debris and precipitation in contained spaces created by a secondary containment for aboveground storage tanks – and portable tanks that have a capacity greater than 2,500 L [as stated in Sentence 4.2.1.1.(3)] – for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants;
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”;
- appliances and their ancillary equipment within the scope of CAN/CSA-B139;
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects;
- the storage of aerosol products covered under Subsection 3.2.5.;
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act;
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act;
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55;
- Sentence 4.10.1.1.(2) and Subsection 4.10.3., which apply to distilled beverage alcohol at distilleries.

Intent

I1. To limit the probability of reduced holding capacity or unavailability of the containment in an emergency, which could lead to the escape of liquid outside of the spill containment, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.

I2. To limit the probability of delays or ineffectiveness in conducting firefighting or spill control operations, which could lead to the spread of fire beyond the point of fire origin, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

Attribution - functional statement/objective F81,F44-OS1.1 and F12-OS1.2

CodeText

1) Liquids, debris and precipitation shall not accumulate in the contained spaces created by a secondary containment.

Application

A1. Accumulation of liquids, debris and precipitation in contained spaces created by a secondary containment for aboveground storage tanks – and portable tanks that have a capacity greater than 2500 L [as stated in Sentence 4.2.1.1.(3)] – for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.1.1.(2) and Subsection 4.10.3., which apply to distilled beverage alcohol at distilleries.

Intent

I1. To limit the probability of reduced holding capacity or unavailability of the containment in an emergency, which could lead to the escape of liquid outside of the spill containment, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.

I2. To limit the probability of delays or ineffectiveness in conducting firefighting or spill control operations, which could lead to the spread of fire beyond the point of fire origin, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Accumulation of liquids and debris in contained spaces created by a secondary containment for aboveground storage tanks – and portable tanks that have a capacity greater than 2 500 L [as stated in Sentence 4.2.1.1.(3)] – for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.1.1.(2) and Subsection 4.10.3., which apply to distilled beverage alcohol at distilleries.

Intent

I1. To limit the probability of creating a fire hazard near the storage tank, which could lead to a fire or explosion, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Removal of liquid spill from a secondary spill containment for aboveground storage tanks – and portable tanks that have a capacity greater than 2,500 L [as stated in Sentence 4.2.1.1.(3)] – for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception: except as stated in

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.1.1.(2) and Subsection 4.10.3., which apply to distilled beverage alcohol at distilleries.

Intent

II. To direct Alberta Fire Code 2006 users to Subsection 4.1.6.
Application and intent of Division B provisions

F44-OP1.1

4.3.7.8.(3)-02

CodeReference (including record number)

Application - functional statement/objective

I1. To limit the probability of the escape of liquids through the liquid removal system, which could lead to the spread of liquid outside of the secondary containment, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

A1. State of the controls for the removal of liquid from a secondary spill containment for aboveground storage tanks – and portable tanks that have a capacity greater than 2 500 L [as stated in Sentence 4.2.1.1.(3)] – for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.1.1.(2) and Subsection 4.10.3., which apply to distilled beverage alcohol at distilleries.

Intent
I1. To limit the probability of the escape of liquids through the liquid removal system, which could lead to the spread of liquid outside of the secondary containment, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
3) Controls for the liquid removal system required in Sentence (2) shall be
a) normally closed,
b) accessible under fire exposure conditions, and
c) located so they can be operated from outside the contained space.

Application
A1. Location and accessibility of controls for the removal of liquid from the secondary spill containment for aboveground storage tanks – and portable tanks that have a capacity greater than 2 500 L [as stated in Sentence 4.2.1.1.(3)] – for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.1.1.(2) and Subsection 4.10.3., which apply to distilled beverage alcohol at distilleries.

Intent
I1. To limit the probability of firefighters being delayed or impeded in gaining access to the controls, which could lead to overtopping or failure of the spill containment area during firefighting operations, which could lead to the spread of liquid outside of the secondary containment, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Application

A1. Location and accessibility of controls for the removal of liquid from a secondary spill containment for aboveground storage tanks – and portable tanks that have a capacity greater than 2 500 L [as stated in Sentence 4.2.1.1.(3)] – for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:

except as stated in

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.1.1.(2) and Subsection 4.10.3., which apply to distilled beverage alcohol at distilleries.

Intent

I1. To limit the probability of firefighters being delayed or impeded in gaining access to the controls, which could lead to overtopping or failure of the spill containment area during firefighting operations, which could lead to the spread of liquid outside of the secondary containment, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

Application

A1. Transfer of water contaminated with flammable liquids or combustible liquids from a diked area surrounding an aboveground storage tank to a collection system.

Exception:

except as stated in

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.1.1.(2) and Subsection 4.10.3., which apply to distilled beverage alcohol at distilleries.

Intent

I1. To limit the probability of accumulation and compression of vapours emitted from flammable liquids or combustible liquids by reason of the operation of a centrifugal pump which could lead to explosions in the pump or pipework, which could lead to harm to persons.

I2. To limit the probability of accumulation and compression of vapours emitted from flammable liquids or combustible liquids by reason of the operation of a centrifugal pump which could lead to explosions in the collection system, which could lead to harm to persons.
A1. Use of contained space created by a secondary containment for aboveground storage tanks – and portable tanks that have a capacity greater than 2,500 L [as stated in Sentence 4.2.1.1.(3)] – for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.1.1.(2) and Subsection 4.10.3., which apply to distilled beverage alcohol at distilleries.

Application

F81,F44,F01,F02-OP1.1 and F12-OP1.2

Intent

I1. To limit the probability of reduced holding capacity or unavailability of the containment in an emergency, which could lead to the escape of liquid outside of the spill containment, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.

I2. To limit the probability of delays or ineffectiveness in conducting firefighting or spill control operations, which could lead to the spread of fire beyond the point of fire origin, which could lead to damage to the building or facility.

I3. To limit the probability of creating a fire hazard near the storage tank, which could lead to a fire exposure to the tank, which could lead to the escape and spread of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Use of contained space created by a secondary containment for aboveground storage tanks and portable tanks that have a capacity greater than 2,500 L [as stated in Sentence 4.2.1.1.(3)] – for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:

- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to:
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.1.1.(2) and Subsection 4.10.3., which apply to distilled beverage alcohol at distilleries.

Intent

I1. To limit the probability of reduced holding capacity or unavailability of the containment in an emergency, which could lead to the escape of liquid outside of the spill containment, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.

I2. To limit the probability of delays or ineffectiveness in conducting firefighting or spill control operations, which could lead to the spread of fire beyond the point of fire origin, which could lead to harm to persons.

I3. To limit the probability of creating a fire hazard near the storage tank, which could lead to a fire exposure to the tank, which could lead to the escape and spread of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Use of contained space created by a secondary containment for aboveground storage tanks and portable tanks that have a capacity greater than 2,500 L [as stated in Sentence 4.2.1.1.(3)] for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.1.1.(2) and Subsection 4.10.3., which apply to distilled beverage alcohol at distilleries.

Application

1) The contained space created by a secondary containment shall not be used for storage purposes.

Intent

I1. To limit the probability of reduced holding capacity or unavailability of the containment in an emergency, which could lead to the escape of liquid outside of the spill containment, which could lead to harm to the public.

I2. To limit the probability of delays or ineffectiveness in conducting firefighting or spill control operations, which could lead to the spread of liquid beyond the point of liquid origin, which could lead to harm to the public.

I3. To limit the probability of creating a fire hazard near the storage tank, which could lead to a fire exposure to the tank, which could lead to the escape and spread of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Location – with respect to building foundations – of underground storage tanks for flammable liquids and combustible liquids.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

Exception:
- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
    - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that a leak from the tank will migrate to or under an adjacent building, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to damage to the adjacent building.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

I1. To limit the probability that a leak from the tank will migrate to or under an adjacent building, which could lead to the accumulation and subsequent ignition of vapour by a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Minimum horizontal distance – from street lines and other property lines – of underground storage tanks for flammable liquids and combustible liquids.

Exception:

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that excavation, construction work or vehicular traffic on adjacent property will lead to damage to the tank, which could lead to the escape and spread of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.3.8.1.(2)-06
Attribution - functional statement/objective F81-O51.1

CodeText

2) Underground storage tanks shall be separated by a horizontal distance of not less than
a) 600 mm from adjacent underground tanks or structures,
   b) 1 m from a building foundation or a street line, and
   c) 1.5 m from other property lines.

Application

A1. Minimum horizontal distance – from street lines and other property lines – of underground storage tanks for flammable liquids and combustible liquids.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - appliance and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

11. To limit the probability that excavation, construction work or vehicular traffic on adjacent property will lead to damage to the tank, which could lead to the escape and spread of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Classification of sites in accordance with the sensitivity to problems arising from failure to contain the contents of underground storage tanks.

Exception:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 5.

Application

A1. Classification of sites in accordance with the sensitivity to problems arising from failure to contain the contents of underground storage tanks.

Exception:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 5.

Intent

I1. To classify a site at which an underground storage tank is located in accordance with the sensitivity of the site.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Classification of a site in accordance with the sensitivity to problems arising from failure to contain the contents of an underground storage tank.

This applies to sites within:
- 500 m of wells or other locations where underground water is being used,
- 200 m of a lake, river or other body of water,
- 150 m of a major underground structure,
- a municipality that has been deemed to require protection from hydrocarbon spills.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

4) The site sensitivity classification shall be Class A where the underground storage tank system is located within:
   a) 500 m of wells or other locations where underground water is being used,
   b) 200 m of a lake, river or other body of water,
   c) 150 m of a major underground structure,
   d) a municipality that has been deemed to require protection from hydrocarbon spills.

Application

A1. Classification of a site in accordance with the sensitivity to problems arising from failure to contain the contents of an underground storage tank.

This applies to sites within:
- 500 m of wells or other locations where underground water is being used,
- 200 m of a lake, river or other body of water,
- 150 m of a major underground structure,
- a municipality that has been deemed to require protection from hydrocarbon spills.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to:
   - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
   - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
   - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
   - the storage of aerosol products covered under Subsection 3.2.5.,
   - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
   - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
   - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
   - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

11. To classify a site at which an underground storage tank is located in accordance with its sensitivity by providing appropriate criteria.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Classification of a site in accordance with the sensitivity to problems arising from failure to contain the contents of an underground storage tank.

This applies to sites other than those within:
- 500 m of wells or other locations where underground water is being used,
- 200 m of a lake, river or other body of water,
- 150 m of a major underground structure,
- a municipality that has been deemed to require protection from hydrocarbon spills.

Exception: except as stated in:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

CodeReference (including record number) 4.3.8.1.(5)-01
Attribution - functional statement/objective Not applicable

CodeText

5) The site sensitivity classification shall be Class B if the site does not meet the criteria for Class A sites described in Sentence (4).

Application

A1. Classification of a site in accordance with the sensitivity to problems arising from failure to contain the contents of an underground storage tank.

This applies to sites other than those within:
- 500 m of wells or other locations where underground water is being used,
- 200 m of a lake, river or other body of water,
- 150 m of a major underground structure,
- a municipality that has been deemed to require protection from hydrocarbon spills.

Exception: except as stated in:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

II. To classify a site at which an underground storage tank is located in accordance with its sensitivity by providing appropriate criteria.
6) No person shall install an underground storage tank system at a location that has a site sensitivity classification of Class A as described in Sentence (4), unless
a) the underground storage tank system is constructed and installed in conformance with this Part,
b) a means of secondary containment is provided (see Appendix A),
c) an overfill protection device conforming to ULC/ORD-C58.15, “Overfill Protection Devices for Flammable Liquid Storage Tanks,” is installed,
d) a spill containment device conforming to ULC/ORD-C58.19, “Spill Containment Devices for Underground Flammable Liquid Storage Tanks,” is installed,
e) a line leak detection device is installed on pressurized or suction piping systems (see Appendix A),
f) all storage tank fill pipes are equipped with liquid- and vapour-tight adapters and caps,
h) a valve is installed on buried suction piping systems in order to isolate piping during leakage testing, and
i) under dispenser sumps conforming to ULC/ORD-C107.21, “Under Dispenser Sumps,” are installed.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

To limit the probability of spills, leaks, or overflows from an underground storage tank located at a Class A site sensitivity location, associated piping or supports, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.3.8.1.(7)-01
Attribution - functional statement/objective F43,F44,F81-OH5

CodeText

7) No person shall install an underground storage tank system at a location that has a site sensitivity classification of Class B as described in Sentence (5) unless:

a) the underground storage tank system is constructed and installed in conformance with this Part,

b) an overfill protection device conforming to Clause (6)(c) is installed,

c) a spill containment device conforming to Clause (6)(d) is installed,

d) leak detection is installed (see A-4.3.8.1.(6)(e) in Appendix A),

e) a line leak detection device is installed on pressurized or suction piping systems (See A-4.3.8.1.(6)(f) in Appendix A),

f) all storage tank fill pipes are equipped with liquid- and vapour-tight adapters and caps,

g) a valve is installed on buried suction piping systems in order to isolate piping during leakage testing, and

h) under dispenser sumps conforming to ULC/ORD-C107.21, “Under Dispenser Sumps,” are installed.

Application

A1. Prohibition on the installation of an underground storage tank for flammable liquids or combustible liquids at a location with a site sensitivity classification of Class B unless:

- the underground storage tank system is constructed and installed in conformance with Part 4,

- an overfill protection device conforming to ULC/ORD-CS8.15, "Overfill Protection Devices for Flammable Liquid Storage Tanks," is installed,

- a spill containment device conforming to ULC/ORD-CS8.19, "Spill Containment Devices for Underground Flammable Liquid Storage Tanks," is installed,

- leak detection is installed,

- a line leak detection device is installed on pressurized or suction piping systems,

- all storage tank fill pipes are equipped with liquid tight and vapour tight adapters and caps,

- a valve is installed on buried suction piping systems in order to isolate piping during leakage testing,

- under dispenser sumps conforming to ULC/ORD-C107.21, “Under Dispenser Sumps,” are installed.

Exception:

except as stated in

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,

- Sentence 4.1.1.1.(3), which applies to

- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",

- appliances and their ancillary equipment within the scope of CAN/CSA-B139,

- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,

- the storage of aerosol products covered under Subsection 3.2.5.,

- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,

- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,

- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and

- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

To limit the probability of spills, leaks, or overflows from an underground storage tank located at a Class B site sensitivity location, associated piping or supports, which could lead to the escape of liquid, which could lead to the spread of ignitable vapours, which could lead to a fire or explosion, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Minimum depth of ground cover over underground storage tanks for flammable liquids and combustible liquids.

Exception:
except as stated in
- Sentence 4.3.8.2.(2), which applies where tanks are subjected to vehicular traffic,
- Sentence 4.3.8.2.(3), which applies where a concrete slab cover is used,
- Sentence 4.3.8.2.(4), which applies where subsurface conditions make it impracticable to install the tank totally below adjacent ground level, and
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

To limit the probability that excessive external loading will lead to tank stress, which could lead to tank damage and failure, which could lead to the escape and spread of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Minimum depth of ground cover over underground storage tanks for flammable liquids and combustible liquids.

Exception:
- except as stated in Sentence 4.3.8.2.(2), which applies where tanks are subjected to vehicular traffic,
- Sentence 4.3.8.2.(3), which applies where a concrete slab cover is used,
- Sentence 4.3.8.2.(4), which applies where subsurface conditions make it impracticable to install the tank totally below adjacent ground level, and
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

F20,F81-OS1.1

I1. To limit the probability that excessive external loading will lead to tank stress, which could lead to tank damage and failure, which could lead to the escape and spread of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Minimum depth of ground cover over underground storage tanks for flammable liquids and combustible liquids in areas subject to vehicular traffic.

Exception:
- except as stated in Sentence 4.3.8.2.(3), which applies where burial depth is permitted to be reduced by the use of a concrete slab,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Attribution - functional statement/objective

4.3.8.2.(2)-01

CodeText

2) Except as required in Sentence (3), storage tanks subjected to vehicular traffic shall be installed not less than 1 m below finished ground level.

CodeText

I1. To limit the probability that excessive external loading will lead to tank stress, which could lead to tank damage and failure, which could lead to the escape and spread of liquid, which could lead to harm to the public.

I2. To override the requirements of Sentence 4.3.8.2.(1) in order to provide improved protection where heavier and more stressful loads [vehicular traffic] are expected.
A1. Minimum depth of ground cover over underground storage tanks for flammable liquids and combustible liquids in areas subject to vehicular traffic.

Exception:
- except as stated in Sentence 4.3.8.2.(3), which applies where burial depth is permitted to be reduced by the use of a concrete slab,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”.
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

I1. To limit the probability that excessive external loading will lead to tank stress, which could lead to tank damage and failure, which could lead to the escape and spread of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.

I2. To override the requirements of Sentence 4.3.8.2.(1) in order to require improved protection where heavier and more stressful loads [vehicular traffic] are expected.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Ground cover over underground storage tanks for flammable liquids and combustible liquids provided with either a 150 mm reinforced concrete slab or a 200 mm unreinforced concrete slab over not less than 450 mm of sand is permitted in lieu of the protection described in Sentence (2) provided the slab extends at least 300 mm beyond the storage tank.

Exception:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquified natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

3) Either a 150 mm reinforced concrete slab or a 200 mm unreinforced concrete slab over not less than 450 mm of sand is permitted in lieu of the protection described in Sentence (2) provided the slab extends at least 300 mm beyond the storage tank.

Intent

I1. To limit the probability that excessive external loading will lead to tank stress, which could lead to tank damage and failure, which could lead to the escape and spread of liquid, which could lead to harm to the public.

I2. To override the requirements of Sentences 4.3.8.2.(1) and 4.3.8.2.(2) and permit reduced depth of coverage if adequate alternative protection [concrete slab] is provided.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Ground cover over underground storage tanks for flammable liquids and combustible liquids provided with either a 150 mm reinforced concrete slab or a 200 mm unreinforced concrete slab over not less than 450 mm of sand.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

11. To limit the probability that excessive external loading will lead to tank stress, which could lead to tank damage and failure, which could lead to the escape and spread of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.

12. To override the requirements of Sentences 4.3.8.2.(1) and 4.3.8.2.(2) and permit reduced depth of coverage if adequate alternative protection [concrete slab] is provided.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Minimum depth of ground cover over underground storage tanks for flammable liquids and combustible liquids where subsurface conditions make it impracticable to install the tanks totally below adjacent ground level.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Attribution - functional statement/objective (including record number)

4.3.8.2.(4)-01

CodeReference

I1. To remove the requirement in Sentence 4.3.8.2.(1) for underground tanks to be totally below adjacent ground level if certain conditions exist [subsurface conditions make it impracticable and adequate ground cover is provided over the portion of the tank above adjacent ground level].

This is to limit the probability of tank fire exposure and mechanical damage, which could lead to the escape and spread of liquid, which could lead to harm to the public.

I2. To limit the probability that excessive external loading will lead to tank stress, which could lead to tank damage and failure, which could lead to the escape and spread of liquid, which could lead to harm to the public.

I3. This also permits an unburied [aboveground] tank to be treated as an underground tank.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Minimum depth of ground cover over underground storage tanks for flammable liquids and combustible liquids where subsurface conditions make it impracticable to install the tanks totally below adjacent ground level.

Exception:

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

A1. Minimum depth of ground cover over underground storage tanks for flammable liquids and combustible liquids where subsurface conditions make it impracticable to install the tanks totally below adjacent ground level.

Exception:

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To remove the requirement in Sentence 4.3.8.2.(1) for underground tanks to be totally below adjacent ground level if certain conditions exist [subsurface conditions make it impracticable and adequate ground cover is provided over the portion of the tank above adjacent ground level].

This is to limit the probability of tank fire exposure and mechanical damage, which could lead to the escape and spread of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.

I2. To limit the probability that excessive external loading will lead to tank stress, which could lead to tank damage and failure, which could lead to the escape and spread of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.

I3. This also permits an unburied [aboveground] tank to be treated as an underground tank.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Inspection and repair of any detected damage to the tank shell, protective coating, fittings or anodes shall be repaired before they are lowered into the excavation.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

11. To limit the probability that damage to the tank shell, corrosion protection coating, fittings, or anodes will lead to the premature corrosion of the tank, which could lead to the escape and spread of liquid, which could lead to harm to the public.
Alberta Fire Code 2006

Application and intent of Division B provisions

CodeText

2) An underground storage tank that is damaged shall not be repaired on site and used for storage unless

a) the repair is done by the manufacturer in accordance with ULC refurbishing specifications, and
b) the manufacturer certifies in writing that the repaired tank meets the applicable manufacturing codes.

(See Appendix A.)

Application

A1. Repair of a damaged underground storage tank for flammable liquids or combustible liquids.

Exception:

except as stated in

- Sentence 4.3.8.3.(2), which applies to repair of damage to the storage tank shell,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that repairs that would not meet the standards to which tanks have been manufactured will lead to premature tank failure, which could lead to the escape and spread of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Application
A1. Repair of a damaged underground storage tank for flammable liquids or combustible liquids.

Exception:
except as stated in
- Sentence 4.3.8.3.(2), which applies to repair of damage to the storage tank shell,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",

Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Method of handling underground storage tanks for flammable liquids and combustible liquids.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability of damage to the corrosion protection coating, which could lead to premature corrosion of the tank, which could lead to the escape and spread of liquid, which could lead to harm to the public.
A1. Method of handling underground storage tanks for flammable liquids and combustible liquids.

Exception:
- except as stated in - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”;
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
Application and intent of Division B provisions

Alberta Fire Code 2006

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,

- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

Intent

H1. To direct Alberta Fire Code 2006 users to Subsection 4.1.6.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application
A1. Anchorage to protect empty underground storage tanks for flammable liquids and combustible liquids against uplift due to hydrostatic forces.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent
I1. To limit the probability that buoyant forces will lead to a tank being lifted out of the ground, which could lead to damage and failure of the tank or its fittings, which could lead to the escape and spread of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Anchorage to protect empty underground storage tanks for flammable liquids and combustible liquids against uplift due to hydrostatic forces.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

F22-OS1.1

1) Underground storage tanks shall be protected against hydrostatic forces which can cause the uplift of the tanks once they are empty. (See Appendix A.)

Intent

11. To limit the probability that buoyant forces will lead to a tank being lifted out of the ground, which could lead to damage and failure of the tank or its fittings, which could lead to the escape and spread of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.

2) Where anchors and ground straps are used to resist the uplift forces referred to in Sentence (1), they shall be
a) electrically isolated from the tank, and
b) installed in such a manner that they do not damage the tank’s shell, protective coating, fittings or anodes.

Application

A1. Installation and electrical isolation of anchors and ground straps used to protect empty underground storage tanks for flammable liquids and combustible liquids against uplift due to hydrostatic forces.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability of damage to the tank’s shell or protective coating, which could lead to the premature corrosion of the tank, which could lead to the escape and spread of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

2) Where anchors and ground straps are used to resist the uplift forces referred to in Sentence (1), they shall be
a) electrically isolated from the tank, and
b) installed in such a manner that they do not damage the tank’s shell, protective coating, fittings or anodes.

Application

A1. Installation and electrical isolation of anchors and ground straps used to protect empty underground storage tanks for flammable liquids and combustible liquids against uplift due to hydrostatic forces.

Exception:
- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability of damage to the tank’s shell or protective coating, which could lead to the premature corrosion of the tank, which could lead to the escape and spread of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
A1. Corrosion protection of underground steel storage tanks, and associated piping and fitting subject to corrosion, for flammable liquids and combustible liquids.

Exception:
- Sentence 4.3.9.1.(2), which applies to jacketed steel tanks or tanks that have corrosion protection conforming to good engineering practice, and
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

2) A steel storage tank not conforming to Sentence (1) is permitted provided it has corrosion protection conforming to good engineering practice such as that described in PACE Report No. 87-1, “Impressed Current Method of Cathodic Protection of Underground Petroleum Storage Tanks,” published by the Canadian Petroleum Products Institute.

Application

A1. Corrosion protection of underground steel storage tanks, and associated piping and fitting subject to corrosion, for flammable liquids and combustible liquids.

Exception:
except as stated in:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to:
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”;
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability of the premature corrosion of a tank, which could lead to the escape and spread of liquid, which could lead to harm to the public.

I2. To remove the requirement in Sentence 4.3.9.1.(1) to conform to a certain standard when other measures are taken, in order to limit the probability that the tank will prematurely corrode, which could lead to the escape and spread of liquid, which could lead to harm to the public.

CodeText

A1. Electrical continuity between anodes and an underground storage tank to provide corrosion protection.

Exception:

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that inadequate corrosion protection would not be discovered before the excavation surrounding the tank is backfilled, which could lead to premature corrosion of the tank, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.3.9.2.(2)-01 Attribution - functional statement/objective Not applicable

CodeText

2) All new installations of steel underground storage tanks shall be tested for adequate corrosion protection after the backfill is filled to the top of the storage tank but before the excavation is closed in and paved over.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

A1. Testing of corrosion protection for a steel underground storage tank for flammable liquids and combustible liquids, after the backfill is filled to the top of the storage tank, but before the excavation is closed in and paved over.

Intent

11. To limit the probability that incomplete installation or damage to corrosion protection coatings or anodes would lead to premature corrosion of the tank, which could lead to the escape and spread of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to explosion or the spread of fire, which could lead to harm to persons.

12. To limit the probability that incomplete installation or damage to corrosion protection coatings or anodes would lead to premature corrosion of the tank, which could lead to the escape of liquid, which could lead harm to the public.
Application and intent of Division B provisions

3) Measurements shall be taken to ensure that a cathodic protection voltage potential of at least 850 millivolt negative to a copper/copper sulphate reference electrode is attained.

Application

A1. Testing of the cathodic protection voltage potential for a steel underground storage tank for flammable liquids and combustible liquids.

Exception:

- except as stated in - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that incomplete installation or damage to corrosion protection anodes would not be discovered, which could lead to premature corrosion of the tank, which could lead to the escape and spread of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to explosion or the spread of fire, which could lead to harm to persons.

I2. To limit the probability that incomplete installation or damage to corrosion protection anodes would not be discovered, which could lead to premature corrosion of the tank, which could lead to the escape of liquid, which could lead harm to the public.
Application and intent of Division B provisions

 Attribution - functional statement/objective Not applicable

4) A certificate shall be provided to the owner of the storage tank by the person conducting the test referred to in Sentences (2) and (3) indicating that acceptable cathodic protection has been achieved.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

A1. Provision of certificate indicating that acceptable cathodic protection has been achieved for an underground steel storage tank for flammable liquids or combustible liquids.

I1. To confirm to the owner of a steel underground storage tank for flammable liquids or combustible liquids that acceptable cathodic protection has been provided.

I2. To state the application of Article 2.2.1.2. of Division C.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.3.9.3.(1)-01
Attribution - functional statement/objective F80,F81-OH5

CodeText

1) No person shall add a new steel underground storage tank to an existing storage tank system that is protected by an impressed current cathodic protection system unless the tank:
   a) conforms to CAN/ULC-S603, "Steel Underground Tanks for Flammable and Combustible Liquids;"
   b) is electrically bonded to the impressed current cathodic protection system, and
   c) has anodes to protect it.

(See Appendix A.)

Application

A1. Prohibition on the addition of a new steel storage tank for flammable liquids or combustible liquids to an existing storage tank system that is protected by an impressed current cathodic protection system unless the tank:
   - conforms to CAN/ULC-S603, "Steel Underground Tanks for Flammable and Combustible Liquids;"
   - is electrically bonded to the impressed current cathodic protection system, and
   - has anodes to protect it.

Exception:
   except as stated in:
   - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
   - Sentence 4.1.1.1.(3), which applies to:
   - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
   - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
   - the storage of aerosol products covered under Subsection 3.2.5.,
   - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
   - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
   - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
   - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that the addition of a new steel storage tank would interfere with the cathodic protection of an existing storage tank system, which could lead to premature corrosion of a tank, which could lead to the escape and spread of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Prohibition on the addition of a cathodically protected steel storage tank for flammable liquids or combustible liquids near to an existing storage tank or storage tank system that is not protected or is protected by a sacrificial anode cathodic protection system unless the tank is
- electrically isolated from the existing system, and
- cathodically protected in conformance with this Subsection.
(See Appendix A.)

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent
11. To limit the probability that an unprotected or sacrificial anode protected existing storage tank or storage tank system would interfere with the cathodic protection of a new steel storage tank, which could lead to premature corrosion of a tank, which could lead to the escape and spread of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

1) Underground storage tanks shall be provided with vent openings and piping of sufficient cross-sectional area designed to vent the tanks during the maximum filling or withdrawal rate without causing the allowable stress for the tank to be exceeded.

Application

A1. Design of normal vent openings and piping for underground storage tanks for flammable liquids and combustible liquids.

Exception:

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that liquid entering or leaving the tank will lead to an excessive internal tank vacuum or pressure, which could lead to the failure of the tank, which could lead to the escape of liquid, which could lead to harm to the public.
1) Underground storage tanks shall be provided with vent openings and piping of sufficient cross-sectional area designed to vent the tanks during the maximum filling or withdrawal rate without causing the allowable stress for the tank to be exceeded.

Application
A1. Design of normal vent openings and piping for underground storage tanks for flammable liquids and combustible liquids.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent
I1. To limit the probability that liquid entering or leaving the tank will lead to an excessive internal tank vacuum or pressure, which could lead to the failure of the tank, which could lead to the escape of liquid, which could lead to the ignition of vapour by a nearby ignition source, which could lead to harm to persons.
1) Exception at distilleries covered in Section 4.10., vent piping materials and construction shall conform to Subsections 4.5.2., 4.5.3. and 4.5.5.

Application

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.10.5.1.(1) and Clause 4.5.1.1.(2)(d), which apply to piping and pumping systems for distilled beverage alcohol at distilleries.

Intent

I1. To direct Alberta Fire Code 2006 users to Subsections 4.5.2., 4.5.3. and 4.5.5.
Application and intent of Division B provisions

A1. Location of normal vent pipe outlets for underground storage tanks for Class I liquids as related to height above fill pipe openings.

Exception: except as stated in
- Sentence 4.1.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent
11. To limit the probability that Class I liquids will escape through the vent opening during filling operations if the tank is overfilled, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Location, outside buildings, of normal vent pipe outlets for underground storage tanks for Class I liquids.

Exception:

- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

Application and intent of Division B provisions

  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

11. To limit the probability that Class I liquids will escape through the vent opening during filling operations if the tank is overfilled, which could lead to the accumulation of vapour and their subsequent ignition by a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Location of normal vent pipe outlets for underground storage tanks for Class I liquids as related to height above fill pipe openings and height above adjacent ground level.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

A1. Location of normal vent pipe outlets for underground storage tanks for Class I liquids as related to height above fill pipe openings and height above adjacent ground level.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability of the accumulation and subsequent ignition of vapour near buildings by outdoor ignition sources, which could lead to harm to persons.
Application and intent of Division B provisions

A1. Location of normal vent pipe outlets for underground storage tanks for Class I liquids as related to proximity to building openings.

Exception: except as stated in
i) Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
ii) Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
iii) appliances and their ancillary equipment within the scope of CAN/CSA-B139,
iv) the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
v) the storage of aerosol products covered under Subsection 3.2.5.,
vi) liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
vi) the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
ix) liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
x) the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

F01-OS1.1

Attribution - functional statement/objective

1) Vent pipe outlets from underground storage tanks for Class I liquids
a) shall be located outside buildings higher than the fill pipe openings but not less than
i) 3.5 m above the adjacent ground level,
ii) 1.5 m from any building opening, and
iii) 7.5 m from any dispenser, and
b) shall discharge so that flammable vapours will not enter building openings or be trapped near any part of the building.

Intent

11. To limit the probability of the release of vapour in – or the re-entry of vapour into – the building, which could lead to the accumulation and subsequent ignition of vapour, which could lead to harm to persons in the building.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

Page dimensions: 612.0x1417.3

[49x1354]Application and intent of Division B provisions
[48x1172]A1. Location of normal vent pipe outlets for underground storage tanks for Class I liquids as related to distance from dispensers.

Exception:

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

A1. Location of normal vent pipe outlets for underground storage tanks for Class I liquids as related to distance from dispensers.

Exception:

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

II. To limit the probability that vapour released through underground tank vent pipes will come in contact with ignition sources likely to be present near dispensers, such as motor vehicles being refuelled, which could lead to the ignition of the vapour, which could lead to harm to persons.
2) Vent pipe outlets from underground storage tanks for Class II or IIIA liquids shall be located outside buildings at a height that is above the fill pipe opening but not less than 2 m above finished ground level.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application
A1. Location of normal vent pipe outlets for underground storage tanks for Class II or IIIA liquids as related to location outside buildings.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
Application and intent of Division B provisions

- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that Class II or IIIA liquids will escape through the vent opening during filling operations if the tank is overfilled, which could lead to the accumulation of vapour and their subsequent ignition by a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application
3) Vent pipes from underground storage tanks for flammable liquids or combustible liquids shall not be obstructed by any device that may cause excessive back pressure, except that vent pipes from underground storage tanks for Class II or IIIA liquids are permitted to be fitted with return bends, coarse screens or other devices to minimize the entry of foreign material. Exception: except for return bends, coarse screens or other devices to minimize the entry of foreign material fitted on vent pipes from underground storage tanks for flammable liquids or combustible liquids. Exception: except as stated in - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants, - Sentence 4.1.1.1.(3), which applies to - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations", - appliances and their ancillary equipment within the scope of CAN/CSA-B139, - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects, - the storage of aerosol products covered under Subsection 3.2.5., - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act, - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act, - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent
I1. To limit the probability that filling operations will lead to overpressurization or back pressure in the tank, which could lead to failure of the tank and the escape of liquid – or blowback of liquid at the fill opening – which could lead to harm to the public.
A1. Devices that may cause excessive back pressure arising from obstruction of normal vent pipes from underground storage tanks for flammable liquids or combustible liquids.

Exception: except for return bends, coarse screens or other devices to minimize the entry of foreign material fitted on vent pipes from underground storage tanks for Class II or IIIA liquids.

Exception: except as stated in:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Devices – used to minimize the entry of foreign material – fitted to normal vent pipes from underground storage tanks for Class II or IIIA liquids.

Exception:

except for return bends, coarse screens or other devices to minimize the entry of foreign material fitted on vent pipes from underground storage tanks for Class II or IIIA liquids.

Exception:

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To exempt certain devices in order to limit the probability of the entry of foreign material.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Entry location and maximum extension into the tank of normal vent piping for underground storage tanks for flammable liquids or combustible liquids for a vent equipped with a vent alarm.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

F11-OH5

4) Vent piping shall enter the storage tank through the top of the tank and shall not extend into the tank more than 25 mm except when the vent is equipped with a vent alarm.

4.3.10.3.(4)-01

CodeReference (including record number)

4) Vent piping shall enter the storage tank through the top of the tank and shall not extend into the tank more than 25 mm except when the vent is equipped with a vent alarm.

CodeText

I11To remove the limitation on the extension of the vent piping into the tank [as stated in the beginning of Sentence 4.3.10.3.(4)] and permit vent piping to extend beyond this limitation if the vent is equipped with a vent alarm that will alert trained personnel of any vent obstruction.

This is to limit the probability that blocking or obstruction of the vent pipe by liquid will lead to overpressurization or back pressure, which could lead to failure of the tank and the escape of liquid — or blowback of liquid at the fill opening — which could lead to harm to the public.

Intent
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Entry location and maximum extension into the tank of normal vent piping for underground storage tanks for flammable liquids or combustible liquids for a vent equipped with a vent alarm.

Exception:

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To remove the limitation on the extension of the vent piping into the tank [as stated in the beginning of Sentence 4.3.10.3.(4)] and permit vent piping to extend beyond this limitation if the vent is equipped with a vent alarm that will alert trained personnel of any vent obstruction.

This is to limit the probability that blocking or obstruction of the vent pipe by liquid will lead to overpressurization or back pressure, which could lead to failure of the tank and the escape of liquid – or blowback of liquid or vapour at the fill opening – which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Entry location and maximum extension into the tank of normal vent piping for underground storage tanks for flammable liquids or combustible liquids.

Exception: except for a vent equipped with a vent alarm

CodeText

4) Vent piping shall enter the storage tank through the top of the tank and shall not extend into the tank more than 25 mm except when the vent is equipped with a vent alarm.

Application

F20,F81-OH5

Intent

4) To limit the probability that blocking or obstruction of the vent pipe by liquid will lead to overpressurization or back pressure, which could lead to failure of the tank and the escape of liquid – or blowback of liquid at the fill opening – which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Entry location and maximum extension into the tank of normal vent piping for underground storage tanks for flammable liquids or combustible liquids.

Exception:
except for a vent equipped with a vent alarm.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that blocking or obstruction of the vent pipe by liquid will lead to overpressurization or back pressure, which could lead to failure of the tank and the escape of liquid — or blowback of liquid or vapour at the fill opening — which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Sloping of horizontal runs, construction and support of normal vent piping for underground storage tanks for flammable liquids or combustible liquids.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

A1. Sloping of horizontal runs, construction and support of normal vent piping for underground storage tanks for flammable liquids or combustible liquids.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

II. To limit the probability that blocking or obstruction of the vent pipe by liquid will lead to overpressurization or back pressure, which could lead to failure of the tank and the escape of liquid – or blowback of liquid at the fill opening – which could lead to harm to the public.
A1. Sloping of horizontal runs, construction and support of normal vent piping for underground storage tanks for flammable liquids or combustible liquids.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent
11. To limit the probability that blocking or obstruction of the vent pipe by liquid will lead to overpressurization or back pressure, which could lead to failure of the tank and the escape of liquid – or blowback of liquid or vapour at the fill opening – which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Protection against mechanical damage of normal vent piping for underground storage tanks for flammable liquids or combustible liquids.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and

CodeReference (including record number) 4.3.10.4.(1)-01
Attribution - functional statement/objective F20,F81-OH5

Application

A1. Design of pipe sizes for the manifolding of normal vent piping connecting two or more underground storage tanks for flammable liquids or combustible liquids.

Exception: except as stated in
- Sentence 4.3.10.4.(2), which applies if it is not possible to fill the tanks simultaneously, or the connected vents have a vapour recovery system, and
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that simultaneous filling of connected tanks will lead to overpressurization in the tanks, which could lead to failure of the tanks and the escape of liquid— or blowback of liquid at the fill opening— which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Design of pipe sizes for the manifolding of normal vent piping connecting two or more underground storage tanks for flammable liquids or combustible liquids.

Exception:
- except as stated in Sentence 4.3.10.4.(2), which applies if it is not possible to fill the tanks simultaneously, or the connected vents have a vapour recovery system, and
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent
I1. To limit the probability that simultaneous filling of connected tanks will lead to overpressurization in the tanks, which could lead to failure of the tanks and the escape of liquid – or blowback of liquid or vapour at the fill opening – which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Design of pipe sizes for the manifolding of normal vent piping connecting two or more underground storage tanks for flammable liquids or combustible liquids, where
- it is not possible to fill the connected storage tanks referred to in Sentence 4.3.10.4.(1) simultaneously, or
- the connected vents have a vapour recovery system.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

1. To exempt certain tanks from the application of Sentence 4.3.10.4.(1) and to size vent piping according to the maximum possible vapour flow if it is not possible to fill the connected tanks simultaneously, or the connected vents have a vapour recovery system.

This is to limit the probability of excessive internal tank pressure, which could lead to failure of the tanks and the escape of liquid – or blowback of liquid at the fill opening – which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

Application

A1. Design of pipe sizes for the manifolding of normal vent piping connecting two or more underground storage tanks for flammable liquids or combustible liquids, where
- it is not possible to fill the connected storage tanks referred to in Sentence 4.3.10.4.(1) simultaneously, or
- the connected vents have a vapour recovery system.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To exempt certain tanks from the application of Sentence 4.3.10.4.(1) and to size vent piping according to the maximum possible vapour flow if it is not possible to fill the connected tanks simultaneously, or the connected vents have a vapour recovery system.

This is to limit the probability of excessive internal tank pressure, which could lead to failure of the tanks and the escape of liquid – or blowback of liquid or vapour at the fill opening – which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Application

A1. Manifolding of normal vent piping for underground storage tanks for Class I liquids with vent piping for storage tanks containing Class II or II A liquids.

Exception:

- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5., liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability of the contamination of Class II or III A liquid vapours with Class I liquid vapours, which could lead to an increase in the fire hazard of the tank containing Class II or III A liquids, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Connections for all openings in underground storage tanks shall be liquid- and vapour-tight.

1) Connections for all openings in underground storage tanks for flammable liquids and combustible liquids.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

I1. To limit the probability that liquid will escape through connection openings, which could lead to harm to the public.
A1. Connections for all openings other than vents in underground storage tanks for flammable liquids and combustible liquids.

Exception: except as stated in

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.3.11.2.(1)-01
Attribution - functional statement/objective F43,F01,F81,F34-OS1.1

Openings for measuring liquid levels in underground storage tanks if independent of the fill pipe shall be equipped with a vapour-tight cap or cover which shall be opened only when measuring the liquid level.

Exception:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

A1. Openings for measuring liquid levels in underground storage tanks for flammable liquids and combustible liquids where such openings are independent of the fill pipe.

I1. To limit the probability that liquid or vapour will escape through the opening, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.

I2. To limit the probability of tampering or entry of foreign objects into the tank, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.

I3. To limit the probability of entry of precipitation into the tank, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that liquid will escape through leaking connections, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.3.11.3.(2)-01
Attribution - functional statement/objective F43-OH5

CodeText
2) Remote fill outlets from an underground storage tank shall not be located higher than other outlets from the tank.

Application
A1. Location [maximum height in relation to other outlets] of remote fill outlets from underground storage tanks for flammable liquids and combustible liquids.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent
I1. To limit the probability that liquid will escape through tank openings during filling operations if the tank is overfilled, which could lead to harm to the public.
2) Remote fill outlets from an underground storage tank shall not be located higher than other outlets from the tank.

Exception:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Location of connections for filling or emptying underground storage tanks for flammable liquids and combustible liquids as related to outside buildings and no sources of ignition.

Exception:

- except as stated in Sentence 4.3.11.3.(5), which applies to certain fill piping and filling connections,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability of the accumulation and subsequent ignition of vapour near buildings by outdoor ignition sources, which could lead to harm to persons.
A1. Location of connections for filling or emptying underground storage tanks for flammable liquids and combustible liquids as related to outside buildings and distance from openings.

Exception:

3) Except as stated in

- Sentence 4.3.11.3.(5), which applies to certain fill piping and filling connections,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

4) Connections for filling or emptying storage tanks described in Sentence (3) shall be kept closed to prevent leakage when not in use.

Application
A1. Closing of connections [when not in use] for filling or emptying underground storage tanks for flammable liquids and combustible liquids.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent
I1. To limit the probability that liquid will escape through openings, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Closing of connections [when not in use] for filling or emptying underground storage tanks for flammable liquids and combustible liquids.

Application

A1. Closing of connections [when not in use] for filling or emptying underground storage tanks for flammable liquids and combustible liquids.

Exception:

except as stated in

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that liquid or vapour will escape through openings, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

A1. Location of filling connections for underground storage tanks for flammable liquids and combustible liquids where
- there is a process or activity located indoors and to which the tank is directly associated, or for the collection of used liquids, and
- the fill piping is provided with means to prevent flammable vapours from returning to the building.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

F01-OS1.1

Application - functional statement/objective

4.3.11.3.(5)-01

CodeReference (including record number)

5) A filling connection described in Sentence (3) is permitted to be located inside a building if
a) this is made necessary
i) by a process or activity located indoors and to which the tank is directly associated, or
ii) for the collection of used liquids, and
b) the fill piping is provided with means to prevent flammable vapours from returning to the building.

Intent

I1. To remove the requirement in Sentence 4.3.11.3.(3) for filling connections to be located outdoors if,
- certain conditions exist [the tank is directly associated to a process or activity located indoors, or is used for the collection of used liquids], and
- measures are taken to minimize the accumulation of vapour inside the building.

This is to limit the probability of the ignition of vapour from a nearby ignition source inside the building, which could lead to harm to persons inside the building.
Application and intent of Division B provisions

Application

A1. Location of indoor storage tanks for flammable liquids and combustible liquids in industrial occupancies.

Exception:

- except as stated in Sentence 4.3.12.2., which applies to Class I liquids connected to stationary engines conforming to NFPA 37,
- Sentence 4.1.1.1.2., which applies to unique hazards in process plants,
- Sentence 4.1.1.1.3., which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

I1. To limit the probability that the presence of a storage tank will lead to a fire hazard in occupancies where this is not necessitated by an industrial process or operation, which could lead to harm to persons.
2) Except as permitted by Sentence (3), rooms and floor areas used for the storage of flammable liquids in storage tanks inside buildings shall be classified as Group F, Division 1 occupancies in conformance with the Alberta Building Code 2006. (See Appendix A.)

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants;
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations";
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

11. To classify, as a high hazard industrial occupancy category, rooms and floor areas in which storage tanks for flammable liquids are located.
Application and intent of Division B provisions

Alberta Fire Code 2006

4.3.12.1.(3)-01

Application and intent of Division B provisions

A1. Location of tank systems for collection of used lubricating oils within buildings classified as medium hazard industrial occupancies and low hazard industrial occupancies, provided:
- vent pipe outlets conform to Article 4.3.5.2.
- connections for filling and emptying the tank conform to Article 4.3.6.4.
- ventilation conforms to Subsection 4.1.7.

Exception:
- except as stated in:
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants;
  - Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”;
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

Not applicable

Attribution - functional statement/objective

4.3.12.1.(3)-01

CodeReference (including record number)

3) Subject to Subsection 4.1.7. and Articles 4.3.5.2. and 4.3.6.4., storage tank systems used for the collection of used lubricating oil are permitted inside buildings classified as Group F, Division 2 and Division 3 major occupancies.

CodeText

I1. To modify the application of Sentence 4.3.12.1.(2) by allowing a storage tank for used lubricating oil to be located within a building classified as a medium hazard industrial occupancy or low hazard industrial occupancy

Intent
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Installation and use of fuel supply storage tanks for Class I liquids connected to stationary engines, inside buildings, which are installed in conformance with NFPA 37, "Installation and Use of Stationary Combustion Engines and Gas Turbines."

Exception:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

A1. Installation and use of fuel supply storage tanks for Class I liquids connected to stationary engines, inside buildings, which are installed in conformance with NFPA 37, "Installation and Use of Stationary Combustion Engines and Gas Turbines."

Exception:
- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

11. To limit the probability that a storage tank will lead to a fire hazard, which could lead to harm to persons.

12. To remove the prohibition of storage tanks in any buildings other than industrial occupancies [as stated in Sentence 4.3.12.1.(1)] if measures are taken to limit the fire hazard created by the tank.
Application and intent of Division B provisions

Application

A1. Installation and use of fuel supply storage tanks for Class II and IIIA liquids inside buildings shall conform to this Part when they are used to supply appliances installed in conformance with CAN/CSA-B139, “Installation Code for Oil-Burning Equipment.”

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that a storage tank will lead to a fire hazard, which could lead to harm to persons.

I2. To remove the prohibition of storage tanks in any buildings other than industrial occupancies [as stated in Sentence 4.3.12.1.(1)] if measures are taken to limit the fire hazard created by the tank.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Maximum pressure at the bottom of tanks caused by static head when vent or fill pipes are filled with liquid, for indoor storage tanks for flammable liquids and combustible liquids in industrial occupancies.

Exception: except for tanks that are designed for greater pressures.

Exception: except as stated in:
- Sentence 4.10.3.1.(1), which applies to distilled beverage alcohol in distilleries, and
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

I1. To limit the probability that excessive internal pressure will lead to failure of the tank, which could lead to the escape of liquid, which could lead to harm to the public.

I2. To exempt certain tanks from the application of this Sentence if they are designed for pressures greater than 70 kPa (gauge).
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.3.12.3.(1)-02
Attribution - functional statement/objective F20-OS1.1

CodeText

1) The static head imposed on a storage tank inside a building shall not exceed 70 kPa (gauge) at the bottom of the tank when the vent or fill pipe is filled with liquid unless the tank is designed for greater pressures.

Application

A1. Maximum pressure at the bottom of tanks caused by static head when vent or fill pipes are filled with liquid, for indoor storage tanks for flammable liquids and combustible liquids in industrial occupancies.

Exception: except for tanks that are designed for greater pressures.

Exception:
except as stated in
- Sentence 4.10.3.1.(1), which applies to distilled beverage alcohol in distilleries, and
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that excessive internal pressure will lead to failure of the tank, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.

I2. To exempt certain tanks from the application of this Sentence if they are designed for pressures greater than 70 kPa (gauge).
A1. Locations of and rooms for indoor storage tanks for flammable liquids and combustible liquids in industrial occupancies.

Exception:
- except as stated in Sentence 4.10.4.1.(1), which applies to distilled beverage alcohol in distilleries,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
- Sentence 4.2.8.2.(1), which applies to the incidental storage of not more than 5 000 L of Class IB, IC, II and IIIA liquids,
- Sentence 4.2.8.2.(2), which applies to the incidental storage of one day's supply for normal operations where required for normal plant activity, and
- Sentence 4.3.12.4.(2), which applies to tank quantities greater than are permitted for incidental use in Subsection 4.2.8. [specifically Sentence 4.2.8.2.(2)] where required for special process operations.

I1. To limit the probability of the release of vapour in low areas of a building, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to damage to the building.

I2. To limit the probability that a tank fire will spread outside of the storage room, which could lead to damage to the building.

I3. To direct the Alberta Fire Code 2006 user to Table 4.3.12.4.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application
A1. Locations of and rooms for indoor storage tanks for flammable liquids and combustible liquids in industrial occupancies.

Exception:
- except as stated in Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
- Sentence 4.2.8.2.(1), which applies to the incidental storage of not more than 5 000 L of Class IB, IC, II and IIIA liquids,
- Sentence 4.2.8.2.(2), which applies to the incidental storage of one day's supply for normal operations where required for normal plant activity, and
- Sentence 4.3.12.4.(2), which applies to tank quantities greater than are permitted for incidental use in Subsection 4.2.8. specifically Sentence 4.2.8.2.(2)] where required for special process operations.

Intent
I1. To limit the probability of the release of vapour in low areas of a building, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons.
I2. To limit the probability that a tank fire will spread outside of the storage room, which could lead to harm to persons.
I3. To direct the Alberta Fire Code 2006 user to Table 4.3.12.4.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Locations of and rooms for indoor storage tanks for flammable liquids and combustible liquids in industrial occupancies.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
- Sentence 4.2.8.2.(1), which applies to the incidental storage of not more than 5 000 L of Class IB, IC, II and IIIA liquids,
- Sentence 4.2.8.2.(2), which applies to the incidental storage of one day's supply for normal operations where required for normal plant activity, and
- Sentence 4.3.12.4.(2), which applies to tank quantities greater than are permitted for incidental use in Subsection 4.2.8. [specifically Sentence 4.2.8.2.(2)] where required for special process operations.

Application

To state part of the application of Subsection 4.3.13.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Location of indoor storage tanks for flammable liquids and combustible liquids outside of storage rooms referred to in Sentence 4.3.12.4.(1), in industrial occupancies and where:

- quantities greater than are permitted for incidental use in Subsection 4.2.8. [specifically Sentence 4.2.8.2.(2)] are required for special process operations,
- total quantities per fire compartment are not more than one-half the quantities permitted in Table 4.3.12.4.,
- the tanks are located on the first storey, and
- the installation conforms to Articles 4.3.12.7. to 4.3.12.10. and Article 4.3.13.4.

Exception:
- except as stated in Sentence 4.10.4.1.(1), which applies to distilled beverage alcohol in distilleries,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

A1. Location of indoor storage tanks for flammable liquids and combustible liquids outside of storage rooms referred to in Sentence 4.3.12.4.(1), in industrial occupancies and where:

- quantities greater than are permitted for incidental use in Subsection 4.2.8. [specifically Sentence 4.2.8.2.(2)] are required for special process operations,
- total quantities per fire compartment are not more than one-half the quantities permitted in Table 4.3.12.4.,
- the tanks are located on the first storey, and
- the installation conforms to Articles 4.3.12.7. to 4.3.12.10. and Article 4.3.13.4.

Exception:
- except as stated in Sentence 4.10.4.1.(1), which applies to distilled beverage alcohol in distilleries,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To state the application of Article 4.3.12.7. and to expand the application of Article 4.3.13.4.

I2. To direct Alberta Fire Code 2006 users to Articles 4.3.12.8. to 4.3.12.10.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Location of indoor storage tanks for flammable liquids and combustible liquids outside of storage rooms referred to in Sentence 4.3.12.4.(1), in industrial occupancies and where:

- quantities greater than are permitted for incidental use in Subsection 4.2.8. specifically Sentence 4.2.8.2.(2).
- total quantities per fire compartment are not more than one-half the quantities permitted in Table 4.3.12.4.,
- the tanks are located on the first storey, and
- the installation conforms to Articles 4.3.12.7. to 4.3.12.10. and Article 4.3.13.4.

Exception:
- except as stated in
  - Sentence 4.10.4.1.(1), which applies to distilled beverage alcohol in distilleries,
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

A1. Location of indoor storage tanks for flammable liquids and combustible liquids outside of storage rooms referred to in Sentence 4.3.12.4.(1), in industrial occupancies and where:

- quantities greater than are permitted for incidental use in Subsection 4.2.8. specifically Sentence 4.2.8.2.(2)
- total quantities per fire compartment are not more than one-half the quantities permitted in Table 4.3.12.4.,
- the tanks are located on the first storey, and
- the installation conforms to Articles 4.3.12.7. to 4.3.12.10. and Article 4.3.13.4.

Exception:
- except as stated in
  - Sentence 4.10.4.1.(1), which applies to distilled beverage alcohol in distilleries,
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To remove the requirement in Sentence 4.3.12.4.(1) for tanks to be located in a dedicated storage room if:

- the tanks are located on the first storey where manual firefighting operations are not as likely to be delayed or impeded,
- the tanks are limited to only certain special process operations and quantities quantities greater than those permitted in Sentences 4.2.8.2.(1) and 4.2.8.2.(2) but not exceeding 50% of those permitted in Table 4.3.12.4. for a single class of liquid, and
- the installation meets certain requirements in conformance with Articles 4.3.12.7. to 4.3.12.10. and 4.3.13.4.]
Application and intent of Division B provisions

Alberta Fire Code 2006

4.3.12.5.(1)-01

Attribution - functional statement/objective

F03-OP1.2

1) Fire compartments regulated by this Subsection shall be separated from the remainder of the building by a fire separation having a fire-resistance rating of not less than 2 h.

Application

A1. Minimum fire-resistance ratings of fire separations forming fire compartments separating indoor storage tanks for flammable liquids and combustible liquids in industrial occupancies from the remainder of the building, and where
- quantities are greater than are permitted for incidental use in Subsection 4.2.8. [specifically Sentence 4.2.8.2.(2)],
- the tanks are required for special process operations,
- total quantities per fire compartment are not more than one-half the quantities permitted in Table 4.3.12.4.,
- the tanks are located on the first storey, and
- the tanks are located outside of a storage room required in Sentence 4.3.12.4.(1).

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquified petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that a fire involving tanks will spread outside of the area of fire origin, which could lead to damage to the building.

I2. To limit the probability that activities in other parts of the building will lead to a fire exposure to the tanks, which could lead to the spread of fire to the tanks, which could lead to damage to the building.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Minimum fire-resistance ratings of fire separations forming fire compartments separating indoor storage tanks for flammable liquids and combustible liquids in industrial occupancies from the remainder of the building, and where

- quantities are greater than are permitted for incidental use in Subsection 4.2.8, [specifically Sentence 4.2.8.2.(2)],
- the tanks are required for special process operations,
- total quantities per fire compartment are not more than one-half the quantities permitted in Table 4.3.12.4.,
- the tanks are located on the first storey, and
- the tanks are located outside a storage room required in Sentence 4.3.12.4.(1).

Exception: except as stated in

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that a fire involving tanks will spread outside of the area of fire origin, which could lead to harm to persons in other parts of the building.
Application and intent of Division B provisions

Alberta Fire Code 2006

[4.3.12.4](1), the total quantity permitted for each class of liquid shall be calculated as follows:

\[
\frac{q_I}{Q_I} + \frac{q_{II+IIIA}}{Q_{II+IIIA}} \leq 1
\]

where

- \( q_I \) = the actual quantity of Class I liquids present,
- \( q_{II+IIIA} \) = the actual quantity of Class II and IIIA liquids present,
- \( Q_I \) = the maximum quantity of Class I liquids permitted in Table 4.3.12.4.,
- \( Q_{II+IIIA} \) = the maximum quantity of Class II and IIIA liquids permitted in Table 4.3.12.4.

Application

A1. Total quantity for each class of liquid stored in a single storage room conforming to Subsection 4.3.1.3 [referenced in Sentence 4.3.12.4.(1)] where two or more classes of liquids are stored, for indoor storage tanks for flammable liquids and combustible liquids in industrial occupancies.

Exception:
- except as stated in - Sentence 4.2.8.2.(1), which applies to the incidental storage of not more than 5 000 L of Class IB, IC, II and IIIA liquids,
- Sentence 4.2.8.2.(2), which applies to the incidental storage of one day's supply for normal operations where required for normal plant activity,
- Sentence 4.3.12.4.(2), which applies to tank quantities greater than are permitted for incidental use in Subsection 4.2.8. [specifically Sentence 4.2.8.2.(2)] where required for special process operations,
- Sentence 4.10.4.1.(1), which applies to distilled beverage alcohol in distilleries,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability of the release of vapour in low areas of a building, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to damage to the building.

I2. To limit the probability that a tank fire will spread outside of the storage room, which could lead to damage to the building.

I3. To clarify what quantity limits apply to a storage situation for which there would otherwise be no applicable requirements in Table 4.3.12.4. referenced in Sentence 4.3.12.4.(1).
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.3.12.6.(1)-02
Attribution - functional statement/objective F01-OS1.1 and F02-OS1.2

Application and intent of Division B provisions

A1. Total quantity for each class of liquid stored in a single storage room conforming to Subsection 4.3.12.4.(1), where two or more classes of liquids are stored, for indoor storage tanks for flammable liquids and combustible liquids in industrial occupancies.

Exception:
- except as stated in Sentence 4.2.8.2.(1), which applies to the incidental storage of not more than 5,000 L of Class IB, IC, II and IIIA liquids,
- Sentence 4.2.8.2.(2), which applies to the incidental storage of one day's supply for normal operations where required for normal plant activity,
- Sentence 4.3.12.4.(2), which applies to tank quantities greater than are permitted for incidental use in Subsection 4.2.8. [specifically Sentence 4.2.8.2.(2)] where required for special process operations,
- Sentence 4.10.4.1.(1), which applies to distilled beverage alcohol in distilleries,
- Sentence 4.1.1.1.(1), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to:
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability of the release of vapour in low areas of a building, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons.

I2. To limit the probability that a tank fire will spread outside of the storage room, which could lead to harm to persons.

I3. To clarify what quantity limits apply to a storage situation for which there would otherwise be no applicable requirements in Table 4.3.12.4. referenced in Sentence 4.3.12.4.(1).

CodeText

1) When 2 or more classes of liquids are stored in a single storage room referred to in Sentence 4.3.12.4.(1), the total quantity permitted for each class of liquid shall be calculated as follows:

\[ \frac{q_I}{Q_I} + \frac{q_{II,IIIA}}{Q_{II,IIIA}} \leq 1 \]

where
- \( q_I \) = the actual quantity of Class I liquids present,
- \( q_{II,IIIA} \) = the actual quantity of Class II and IIIA liquids present,
- \( Q_I \) = the maximum quantity of Class I liquids permitted in Table 4.3.12.4.,
- \( Q_{II,IIIA} \) = the maximum quantity of Class II and IIIA liquids permitted in Table 4.3.12.4.

CodeText

1) Where storage tanks for flammable liquids or combustible liquids are located outside of storage rooms conforming to Subsection 4.3.13,
   a) provision shall be made to contain 100% of the volume of the largest storage tank, or to drain away spilled flammable liquids or combustible liquids, and
   b) the area in which the storage tanks are located shall be ventilated (see Appendix A).

Application

A1. Exhaust ventilation for areas containing indoor storage tanks for flammable liquids and combustible liquids located outside of storage rooms conforming to Subsection 4.3.13.1.3, in industrial occupancies, and where, as stated in Sentence 4.3.12.4.(2),
   - quantities greater than are permitted for incidental use in Subsection 4.2.8. [specifically Sentence 4.2.8.2.(2)] are required for special process operations,
   - total quantities per fire compartment are not more than one-half the quantities permitted in Table 4.3.12.4.,
   - the tanks are located on the first storey, and
   - the installation conforms to Articles 4.3.12.8. to 4.3.12.10. and 4.3.13.4.

Exception:

except as stated in
   - Sentence 4.10.7.1.(1), which applies to controlling spilled or leaked distilled beverage alcohol in distilleries,
   - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
   - Sentence 4.1.1.1.(3), which applies to
     - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
     - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
     - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
     - the storage of aerosol products covered under Subsection 3.2.5.,
     - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
     - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
     - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
   - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that vapour will accumulate and be subsequently ignited from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Spill containment measures for indoor storage tanks for flammable liquids and combustible liquids located outside of storage rooms conforming to Subsection 4.3.13.

- provision shall be made to contain 100% of the volume of the largest storage tank, or to drain away spilled flammable liquids or combustible liquids, and
- the area in which the storage tanks are located shall be ventilated (see Appendix A).

Application

1) Where storage tanks for flammable liquids or combustible liquids are located outside of storage rooms conforming to Subsection 4.3.1.3, in industrial occupancies and as stated in Sentence 4.3.12.4.(2) where

- quantities greater than those permitted for incidental use in Subsection 4.2.8. specifically Sentence 4.2.8.2.(2) are required for special process operations,
- total quantities per fire compartment are not more than one-half the quantities permitted in Table 4.3.12.4.,
- the tanks are located on the first storey; and
- the installation conforms to Articles 4.3.12.8. to 4.3.12.10. and 4.3.13.4.

Exception:

- except as stated in Sentences 4.10.7.1.(1), which applies to distilled beverage alcohol in distilleries,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that overtopping of the spill containment area will lead to the spread of liquid outside of the secondary containment, which could lead to harm to the public.
I2. To waive the 10% safety factor required in Sentences 4.3.7.3.(1) and 4.3.7.3.(2) for indoor storage tanks for flammable liquids and combustible liquids permitted to be located outside of a storage room.
Application and intent of Division B provisions

Alberta Fire Code 2006

1) Where storage tanks for flammable liquids or combustible liquids are located outside of storage rooms conforming to Subsection 4.3.13.,
   a) provision shall be made to contain 100% of the volume of the largest storage tank, or to drain away spilled flammable liquids or combustible liquids, and
   b) the area in which the storage tanks are located shall be ventilated (see Appendix A).

Application

A1. Spill containment measures for indoor storage tanks for flammable liquids and combustible liquids located outside of storage rooms conforming to Subsection 4.3.1.3, in industrial occupancies and as stated in Sentence 4.3.12.4.(2) where
   - quantities greater than are permitted for incidental use in Subsection 4.2.8. [specifically Sentence 4.2.8.2.(2)] are required for special process operations,
   - total quantities per fire compartment are not more than one-half the quantities permitted in Table 4.3.12.4,
   - the tanks are located on the first storey, and
   - the installation conforms to Articles 4.3.12.8. to 4.3.12.10. and 4.3.13.4.

Exception:

except as stated in
   - Sentence 4.10.7.1.(1), which applies to distilled beverage alcohol in distilleries,
   - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
   - Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
   - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
   - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
   - the storage of aerosol products covered under Subsection 3.2.5.,
   - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
   - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
   - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
   - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that overtopping of the spill containment area will lead to the spread of liquid outside of the secondary containment, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building.

I2. To waive the 10% safety factor required in Sentences 4.3.7.3.(1) and 4.3.7.3.(2) for indoor storage tanks for flammable liquids and combustible liquids permitted to be located outside of a storage room.
Application and intent of Division B provisions

CodeText

1) Where storage tanks for flammable liquids or combustible liquids are located outside of storage rooms conforming to Subsection 4.3.13.,
- provision shall be made to contain 100% of the volume of the largest storage tank, or to drain away spilled flammable liquids or combustible liquids, and
- the area in which the storage tanks are located shall be ventilated (see Appendix A).

Application

A1. Spill containment measures for indoor storage tanks for flammable liquids and combustible liquids located outside of storage rooms conforming to Subsection 4.3.1.3., in industrial occupancies and as stated in Sentence 4.3.12.4.(2) where:
- quantities greater than are permitted for incidental use in Subsection 4.2.8. [specifically Sentence 4.2.8.2.(2)] are required for special process operations,
- total quantities per fire compartment are not more than one-half the quantities permitted in Table 4.3.12.4.,
- the tanks are located on the first storey, and
- the installation conforms to Articles 4.3.12.8. to 4.3.12.10. and 4.3.13.4.

Exception:
- except as stated in
  - Sentence 4.10.7.1.(1), which applies to distilled beverage alcohol in distilleries,
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
    - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that overtopping of the spill containment area will lead to the spread of liquid outside of the secondary containment, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.

I2. To waive the 10% safety factor required in Sentences 4.3.7.3.(1) and 4.3.7.3.(2) for indoor storage tanks for flammable liquids and combustible liquids permitted to be located outside of a storage room.
Application and intent of Division B provisions

Application

Exception:
- as stated in Sentence 4.10.3.3.(1), which applies to normal and emergency venting of storage tanks in distilleries,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent
I1. To direct Alberta Fire Code 2006 users to Subsections 4.3.4. and 4.3.5.
Application and intent of Division B provisions

Application

A1. Use of weak roof-to-side shell seams as the method of emergency venting inside buildings of indoor storage tanks for flammable liquids and combustible liquids in industrial occupancies.

Exception:

- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

CodeText

2) The use of weak roof-to-side shell seams, designed to rupture before the allowable design stress of the storage tank is reached, shall not be permitted as a means of emergency venting of storage tanks inside buildings.

CodeReference (including record number)

2) The use of weak roof-to-side shell seams, designed to rupture before the allowable design stress of the storage tank is reached, shall not be permitted as a means of emergency venting of storage tanks inside buildings.

CodeText

I1. To exclude a certain type of emergency venting that discharges inside a building.

This is to limit the probability of the release of vapour, which could lead to the ignition of vapour from a nearby ignition source inside the building, which could lead to harm to persons inside the building.
Application and intent of Division B provisions

Alberta Fire Code 2006

Exception: except as stated in

- Sentence 4.3.12.9.(2), which applies to suspended tanks,
- Article 4.10.3.2., which applies to distilled beverage alcohol in distilleries,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

Not applicable

Intent

11. To direct Alberta Fire Code 2006 users to Subsection 4.3.3.

Attribution - functional statement/objective F22,F81,F04,F80,F20-OH5

Application

A1. Design and installation of supports for suspended indoor storage tanks for flammable liquids and combustible liquids in industrial occupancies.

Exception:
except as stated in
- Article 4.10.3.2., which applies to distilled beverage alcohol in distilleries,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

2) Where a storage tank is suspended, rather than supported on a foundation, supports shall be designed and installed in conformance with good engineering practice. (See Appendix A.)

I1. To permit suspended tanks to be used if the supports offer an equivalent level of safety [as conventional supports for tanks located on floors or the ground] by meeting all the performance objectives stated in Subsection 4.3.3.

This is to limit the probability of
- excessive movement of the tank,
- premature corrosion of the tank,
- failure of the supports caused by fire exposure, and
- structural failure of the supports caused by tank loading.

This is to limit the probability of the failure of the tank and associated piping, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions
Alberta Fire Code 2006

Application

A1. Design and installation of supports for suspended indoor storage tanks for flammable liquids and combustible liquids in industrial occupancies.

Exception:
- Article 4.10.3.2., which applies to distilled beverage alcohol in distilleries,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To permit suspended tanks to be used if the supports offer an equivalent level of safety [as conventional supports for tanks located on floors or the ground] by meeting all the performance objectives stated in Subsection 4.3.3.

This is to limit the probability of
- excessive movement of the tank,
- premature corrosion of the tank,
- failure of the supports caused by fire exposure, and
- structural failure of the supports caused by tank loading.

This is to limit the probability of the failure of the tank and associated piping, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability of the buildup of static electric charges during the transfer of flammable liquids and combustible liquids from or into the tank, which could lead to sparks, which could lead to the ignition of vapour, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Design requirements for rooms inside buildings for storage tanks for flammable liquids and combustible liquids.

Exception: except as stated in
- Sentence 4.10.4.1.(1), which applies to distilled beverage alcohol in distilleries,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
- Sentence 4.2.8.2.(1), which applies to the incidental storage of not more than 5 000 L of Class IB, IC, II and II A liquids,
- Sentence 4.2.8.2.(2), which applies to the incidental storage of one day's supply for normal operations where required for normal plant activity, and
- Sentence 4.3.12.4.(2), which applies to special process operations where tank quantities greater than are permitted for incidental use in Subsection 4.2.8, [specifically Sentence 4.2.8.2.(2)] are required.

Intent
I1. To limit the probability of the spread of a fire involving the tank to other parts of the building – and of activities in other parts of the building creating a fire exposure hazard to the tank – which could lead to harm to persons.

Application and intent of Division B provisions

Alberta Fire Code 2006

CodeText

2) Rooms described in Sentence (1) shall be used for no other purposes than the storage and handling of flammable liquids or combustible liquids.

Application

A1. Restriction on use of rooms inside buildings for storage tanks for flammable liquids and combustible liquids.

Exception:
except as stated in
- Sentence 4.10.4.1.(1), which applies to distilled beverage alcohol in distilleries,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
- Sentence 4.2.8.2.(1), which applies to the incidental storage of not more than 5 000 L of Class IB, IC, II and IIIA liquids,
- Sentence 4.2.8.2.(2), which applies to the incidental storage of one day's supply for normal operations where required for normal plant activity, and
- Sentence 4.3.12.4.(2), which applies to special process operations where tank quantities greater than are permitted for incidental use in Subsection 4.2.8. [specifically Sentence 4.2.8.2.(2)] are required.

Intent

I1. To clarify the application of Subsection 4.3.1.3 and state that a tank storage room shall not be used for any other purpose than storage and handling of flammable liquids and combustible liquids.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
- Sentence 4.2.8.2.(1), which applies to the incidental storage of not more than 5 000 L of Class IB, IC, II and IIIA liquids,
- Sentence 4.2.8.2.(2), which applies to the incidental storage of one day's supply for normal operations where required for normal plant activity, and
- Sentence 4.3.12.4.(2), which applies to special process operations where tank quantities greater than are permitted for incidental use in Subsection 4.2.8. (specifically Sentence 4.2.8.2.(2)) are required.

Intent
H1. To limit the probability that the escape of liquid from the tank will go unnoticed, which could lead to the spread of liquid beyond the point of liquid origin, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

Exception:
- except as stated in - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
- Sentence 4.2.8.2.(1), which applies to the incidental storage of not more than 5 000 L of Class IB, IC, II and IIIA liquids,
- Sentence 4.2.8.2.(2), which applies to the incidental storage of one day's supply for normal operations where required for normal plant activity, and
- Sentence 4.3.12.4.(2), which applies to special process operations where tank quantities greater than are permitted for incidental use in Subsection 4.2.8. [specifically Sentence 4.2.8.2.(2)] are required.

Application

I1. To limit the probability that the escape of liquid from the tank will go unnoticed, which could lead to the accumulation of vapour in ignitable concentrations, which could lead to the ignition of vapour from nearby ignition sources, which could lead to damage to the building.
Application and intent of Division B provisions

1. A minimum clear space of 550 mm shall be maintained between the walls of a room described in Article 4.3.13.1. and the sides of any storage tanks within the room.

Application

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
- Sentence 4.2.8.2.(1), which applies to the incidental storage of not more than 5 000 L of Class IB, IC, II and IIIA liquids,
- Sentence 4.2.8.2.(2), which applies to the incidental storage of one day's supply for normal operations where required for normal plant activity, and
- Sentence 4.3.12.4.(2), which applies to special process operations where tank quantities greater than are permitted for incidental use in Subsection 4.2.8. [specifically Sentence 4.2.8.2.(2)] are required.

Intent

I1. To limit the probability that the escape of liquid from the tank will go unnoticed, which could lead to the accumulation of vapour in ignitable concentrations, which could lead to the ignition of vapour from nearby ignition sources, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Explosion venting in storage rooms for indoor storage tanks for flammable liquids and combustible liquids where Class IA or IB liquids are dispensed, in industrial occupancies.

Exception:

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
- Sentence 4.2.8.2.(1), which applies to the incidental storage of not more than 5 000 L of Class IB, IC, II and IIIA liquids,
- Sentence 4.2.8.2.(2), which applies to the incidental storage of one day's supply for normal operations where required for normal plant activity, and
- Sentence 4.3.12.4.(2), which applies to special process operations where tank quantities greater than are permitted for incidental use in Subsection 4.2.8. [specifically Sentence 4.2.8.2.(2)] are required.

Intent

I1. To limit the probability that a vapour explosion in the storage room will lead to damage to the building [critical structural and mechanical damage].
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Explosion venting in storage rooms for indoor storage tanks for flammable liquids and combustible liquids where Class IA or IB liquids are dispensed, in industrial occupancies.

Exception: except as stated in:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
- Sentence 4.2.8.2.(1), which applies to the incidental storage of not more than 5 000 L of Class IB, IC, II and IIIA liquids,
- Sentence 4.2.8.2.(2), which applies to the incidental storage of one day’s supply for normal operations where required for normal plant activity, and
- Sentence 4.3.12.4.(2), which applies to special process operations where tank quantities greater than are permitted for incidental use in Subsection 4.2.8. [specifically Sentence 4.2.8.2.(2)] are required.

I1. To limit the probability that a vapour explosion in the storage room will lead to damage to the building [critical structural and mechanical damage], which could lead to harm to persons in other parts of the building.
Application and intent of Division B provisions

Application

A1. Location and area coverage of hose stations near storage rooms used for the storage of indoor storage tanks for flammable liquids and combustible liquids in industrial occupancies not required by the Alberta Building Code 2006 to be equipped with a standpipe and hose system.

Exception:
- except as stated in Subsection 4.10.8., which applies to distilled beverage alcohol in distilleries,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.2.8.2.(1), which applies to the incidental storage of not more than 5 000 L of Class IB, IC, II and IIIA liquids,
- Sentence 4.2.8.2.(2), which applies to the incidental storage of one day's supply for normal operations where required for normal plant activity, and
- Sentence 4.3.12.4.(2), which applies to special process operations where tank quantities greater than are permitted for incidental use in Subsection 4.2.8. [specifically Sentence 4.2.8.2.(2)] are required.

Intent

I1. To limit the probability that escaped liquid will spread outside of the spill area, which could lead to the accumulation of vapour in ignitable concentrations, which could lead to the ignition of vapour from nearby ignition sources, which could lead to damage to the building.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Location of hose stations near storage rooms used for the storage of indoor storage tanks for flammable liquids and combustible liquids in industrial occupancies not required by the Alberta Building Code 2006 to be equipped with a standpipe and hose system.

Exception:
- except as stated in Subsection 4.10.8., which applies to distilled beverage alcohol in distilleries,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.2.8.2.(1), which applies to the incidental storage of not more than 5 000 L of Class IB, IC, II and IIIA liquids,
- Sentence 4.2.8.2.(2), which applies to the incidental storage of one day's supply for normal operations where required for normal plant activity, and
- Sentence 4.3.12.4.(2), which applies to special process operations where tank quantities greater than are permitted for incidental use in Subsection 4.2.8. [specifically Sentence 4.2.8.2.(2)] are required.

Intent
I1. To limit the probability that escaped liquid will spread outside of the spill area, which could lead to the accumulation of vapour in ignitable concentrations, which could lead to the ignition of vapour from nearby ignition sources, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Location and area coverage of hose stations near storage rooms used for the storage of indoor storage tanks for flammable liquids and combustible liquids in industrial occupancies not required by the Alberta Building Code 2006 to be equipped with a standpipe and hose system.

Exception:

- Subsection 4.10.8., which applies to distilled beverage alcohol in distilleries,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.2.8.2.(1), which applies to the incidental storage of not more than 5 000 L of Class IB, IC, II and IIIA liquids,
- Sentence 4.2.8.2.(2), which applies to the incidental storage of one day's supply for normal operations where required for normal plant activity, and
- Sentence 4.3.12.4.(2), which applies to special process operations where tank quantities greater than are permitted for incidental use in Subsection 4.2.8. [specifically Sentence 4.2.8.2.(2)] are required.

Application

1) In buildings not required to be equipped with a standpipe and hose system by the Alberta Building Code 2006, hose stations shall be provided in the vicinity of the storage room, such that all parts of the room are within reach of a hose stream.

(See Appendix A.)

Intent

11. To limit the probability that escaped liquid will spread outside of the spill area, which could lead to harm to the public.
Application and intent of Division B provisions

Application

A1. Portable extinguishers (location, type, rating, installation, inspection, maintenance) for Class B fires installed near storage rooms used for the storage of indoor storage tanks for flammable liquids and combustible liquids in industrial occupancies.

Exception:

- Article 4.10.8.1., which applies to distilled beverage alcohol in distilleries,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Article 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
- Sentence 4.2.8.2.(1), which applies to the incidental storage of not more than 5 000 L of Class IB, IC, II and IIA liquids,
- Sentence 4.2.8.2.(2), which applies to the incidental storage of one day's supply for normal operations where required for normal plant activity, and
- Sentence 4.3.12.4.(2), which applies to special process operations where tank quantities greater than are permitted for incidental use in Subsection 4.2.8. (specifically Sentence 4.2.8.2.(2)) are required.

Intent

I1. To direct Alberta Fire Code 2006 users to Subsection 2.1.5. and Sentence 6.2.1.1.(1).
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.3.13.5.(1)-01

CodeText

1) Placards conforming to Article 3.2.7.14., identifying the liquids stored as flammable liquids or combustible liquids and the capacities of the storage tanks, shall be posted in a conspicuous location outside the room, and that information shall be included in the fire safety plan required in Article 4.1.5.5.

Application

A1. Posting of placards in a conspicuous location outside the room, identifying the liquids being stored and the capacities of the storage tanks, for flammable liquids and combustible liquids in storage rooms in industrial occupancies.

Exception:
- except as stated in Article 4.10.8.1., which applies to distilled beverage alcohol in distilleries,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
- Sentence 4.2.8.2.(1), which applies to the incidental storage of not more than 5 000 L of Class IB, IC, II and IIIA liquids,
- Sentence 4.2.8.2.(2), which applies to the incidental storage of one day's supply for normal operations where required for normal plant activity, and
- Sentence 4.3.12.4.(2), which applies to special process operations where tank quantities greater than are permitted for incidental use in Subsection 4.2.8. [specifically Sentence 4.2.8.2.(2)] are required.

Intent

11. To limit the probability of delays or ineffectiveness in conducting firefighting operations, which could lead to the spread of fire to other parts of the building, which could lead to damage to the building.
Application and intent of Division B provisions

Alberta Fire Code 2006

4.3.13.5.(1)-05

Not applicable

A1. Posting of placards in a conspicuous location outside of the room, identifying the liquids being stored and the capacities of the storage tanks, for flammable liquids and combustible liquids in storage rooms in industrial occupancies.

Exception:
- except as stated in Article 4.10.8.1., which applies to distilled beverage alcohol in distilleries;
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants;
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
- Sentence 4.2.8.2.(1), which applies to the incidental storage of not more than 5 000 L of Class IB, IC, II and IIIA liquids,
- Sentence 4.2.8.2.(2), which applies to the incidental storage of one day's supply for normal operations where required for normal plant activity, and
- Sentence 4.3.12.4.(2), which applies to special process operations where tank quantities greater than are permitted for incidental use in Subsection 4.2.8. [specifically Sentence 4.2.8.2.(2)] are required.

Intent
- 11. To expand the application of Article 3.2.7.14.
Application and intent of Division B provisions

Alberta Fire Code 2006

Exception:
except for normal and emergency vents.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
- Sentences 4.10.1.1.(2) and 4.10.5.1.(1), which apply to distilled beverage alcohol at distilleries.

Intent
11. To limit the probability of the escape of liquid through connection openings, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number)  4.3.14.1.(1)-02
Attribution - functional statement/objective  F43.F01-OS1.1

Application

Exception: except for normal and emergency vents.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquid natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
- Sentences 4.10.1.1.(2) and 4.10.5.1.(1), which apply to distilled beverage alcohol at distilleries.

Intent

I1. To limit the probability of the escape of liquid or vapour through connection openings, which could lead to the accumulation of vapour and subsequent ignition from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Application

Exception: except for normal and emergency vents.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
- Sentences 4.10.1.1.(2) and 4.10.5.1.1,(1), which apply to distilled beverage alcohol at distilleries.

Intent

1. To limit the probability that damage or malfunction of tank-associated piping will lead to the escape of liquid, which could lead to harm to the public.
2) Connections to storage tanks through which liquid can flow shall be provided with valves located as close as practicable to the tank.

Exception:
except for normal and emergency vents/

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
- Sentences 4.10.1.1.(2) and 4.10.5.1.(1), which apply to distilled beverage alcohol at distilleries.

I1. To limit the probability that damage or malfunction of tank-associated piping will lead to the escape of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to damage to the building.
Connections to storage tanks through which liquid can flow shall be provided with valves located as close as practicable to the tank.

Exception:

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants;
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations";
- appliances and their ancillary equipment within the scope of CAN/CSA-B139;
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects;
- the storage of aerosol products covered under Subsection 3.2.5.;
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act;
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act;
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
- Sentences 4.10.1.1.(2) and 4.10.5.1.(1), which apply to distilled beverage alcohol at distilleries.

To limit the probability that damage or malfunction of tank-associated piping will lead to the escape of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

Application

A1. Openings that are independent of the fill pipe and are used for measuring the liquid level in indoor storage tanks containing Class I or II liquids shall be equipped with a vapour-tight cap which shall be opened only when measuring the liquid level.

Exception:

except for normal and emergency vents.

Exception:

except as stated in:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to:
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
- Sentences 4.10.1.1.(2) and 4.10.5.1.1.(1), which apply to distilled beverage alcohol at distilleries.

Intent

I1. To limit the probability that liquid or vapour will escape through the opening, which could lead to the ignition of vapour, which could lead to a fire or explosion, which could lead to harm to persons.

I2. To limit the probability of tampering or entry of foreign objects into the tank, which could lead to the ignition of vapour, which could lead to a fire or explosion, which could lead to harm to persons.

I3. To limit the probability of entry of precipitation into the tank, which could lead to the escape of liquid, which could lead to the ignition of vapour, which could lead to a fire or explosion, which could lead to harm to persons.
Application and intent of Division B provisions

- Sentences 4.10.1.1.(2) and 4.10.5.1.(1), which apply to distilled beverage alcohol at distilleries.

Application

A1. Openings that are independent of the fill pipe and are used for measuring liquid levels in indoor storage tanks containing Class I or II liquids in industrial occupancies.

Intent

I1. To limit the probability that liquid will escape through the opening, which could lead to harm to the public.
I2. To limit the probability of entry of precipitation into the tank, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Method of protection against overflow and vapour pressure of openings that are independent of the fill pipe and are used for measuring liquid levels in indoor storage tanks containing Class I or II liquids in industrial occupancies.

Exception: except for normal and emergency vents.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentences 4.10.1.1.(2) and 4.10.5.1.(1), which apply to distilled beverage alcohol at distilleries.

Intent
I1. To limit the probability that pressure surges in the tank will lead to damage to the vapour-tight cap, which could lead to the escape of liquid through these damaged openings, which could lead to harm to the public.
Application and intent of Division B provisions

Application

Application

A1. Method of protection against overflow and vapour pressure of openings that are independent of the fill pipe and are used for measuring liquid levels in indoor storage tanks containing Class I or II liquids in industrial occupancies.

Exception:

except for normal and emergency vents.

Exception:

except as stated in

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

- Sentences 4.10.1.1.(2) and 4.10.5.1.1(1), which apply to distilled beverage alcohol at distilleries.

Intent

I1. To limit the probability that pressure surges in the tank will lead to damage to the vapour-tight cap, which could lead to the escape of liquid or vapour through these damaged openings, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Application and intent of Division B provisions

Application

1. Frequency and recording of liquid level measurements for an underground storage tank for flammable liquids or combustible liquids that is taken out of service for a period not exceeding 180 days.

Exception:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that the escape of liquid from tanks will go unnoticed, which could lead to appropriate measures not being taken, which could lead to the spread of liquid, which could lead to harm to the public.

I2. To limit the probability that vandalism, tampering or unwanted dispensing will lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

CodeReference (including record number) 4.3.15.1.(1)-02
Attribution - functional statement/objective Not applicable

CodeText

- 1) When underground storage tanks will be out of service for a period not exceeding 180 days:
  - a) the liquid level in the storage tank shall be measured at intervals not greater than one month and a record of the measurements shall be retained in conformance with Article 2.2.1.2. of Division C,
  - b) fill pipe covers and covers over openings to measure liquid levels, dispensers and power controls shall be kept locked when not in use, and
  - c) vent piping shall be kept open.

Application

A1. Frequency and recording of liquid level measurements for an underground storage tank for flammable liquids or combustible liquids that is taken out of service for a period not exceeding 180 days.

Exception:

except as stated in

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

11. To state the application of Article 2.2.1.2. of Division C.
Application and intent of Division B provisions

Application of Division B

A1. Procedure of preparation of tank to be taken out of service and of notification concerning an underground storage tank, connected piping, and dispensers, that are taken out of service for a period exceeding 180 days.

Exception:
- Exception as stated in Sentence (3), which applies to underground storage tank facilities that are operated on a seasonal basis,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

I1. To limit the probability that the escape of liquid from tanks will go unnoticed, which could lead to appropriate measures not being taken, which could lead to the spread of liquid, which could lead to harm to the public.

I2. To limit the probability that vandalism, tampering or unwanted dispensing will lead to the escape of liquid, which could lead to harm to the public.

Application

A1. Procedure of preparation of tank to be taken out of service and of notification concerning an underground storage tank, connected piping, and dispensers, that are taken out of service for a period exceeding 180 days.

Exception:
- Exception as provided in Sentence (3), when underground storage tanks will be out of service for a period exceeding 180 days.
  a) the authority having jurisdiction shall be notified, in writing, as soon as practicable,
  b) the storage tanks, connected piping and dispensers shall be emptied of Class I liquid,
  c) the storage tanks, piping and dispensers shall be refilled with a Class II or IIIA liquid, or not less than 1 kg of dry ice for each 500 L of tank capacity shall be added to the storage tank,
  d) measurements of the liquid level of each storage tank containing a Class II or IIIA liquid shall be made at intervals not greater than one month, and a record of the measurements shall be retained in conformance with Article 2.2.1.2. of Division C, and
  e) fill pipe covers and covers over openings to measure liquid levels, dispensers and power controls shall be locked.

Rationale

Application

A1. Procedure of preparation of tank to be taken out of service and of notification concerning an underground storage tank, connected piping, and dispensers, that are taken out of service for a period exceeding 180 days.

Exception:
- Exception as provided in Sentence (3), when underground storage tanks will be out of service for a period exceeding 180 days.
  a) the authority having jurisdiction shall be notified, in writing, as soon as practicable,
  b) the storage tanks, connected piping and dispensers shall be emptied of Class I liquid,
  c) the storage tanks, piping and dispensers shall be refilled with a Class II or IIIA liquid, or not less than 1 kg of dry ice for each 500 L of tank capacity shall be added to the storage tank,
  d) measurements of the liquid level of each storage tank containing a Class II or IIIA liquid shall be made at intervals not greater than one month, and a record of the measurements shall be retained in conformance with Article 2.2.1.2. of Division C, and
  e) fill pipe covers and covers over openings to measure liquid levels, dispensers and power controls shall be locked.

CodeText

2) Except as provided in Sentence (3), when underground storage tanks will be out of service for a period exceeding 180 days:
   a) the authority having jurisdiction shall be notified, in writing, as soon as practicable,
   b) the storage tanks, connected piping and dispensers shall be emptied of Class I liquid,
   c) the storage tanks, piping and dispensers shall be refilled with a Class II or IIIA liquid, or not less than 1 kg of dry ice for each 500 L of tank capacity shall be added to the storage tank,
   d) measurements of the liquid level of each storage tank containing a Class II or IIIA liquid shall be made at intervals not greater than one month, and a record of the measurements shall be retained in conformance with Article 2.2.1.2. of Division C, and
   e) fill pipe covers and covers over openings to measure liquid levels, dispensers and power controls shall be locked.

I1. To limit the probability that the escape of liquid from tanks will go unnoticed, which could lead to appropriate measures not being taken, which could lead to the spread of liquid, which could lead to harm to the public.

I2. To limit the probability that vandalism, tampering or unwanted dispensing will lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeText

2) Except as provided in Sentence (3), when underground storage tanks will be out of service for a period exceeding 180 days:
   a) the authority having jurisdiction shall be notified, in writing, as soon as practicable,
   b) the storage tanks, connected piping and dispensers shall be emptied of Class I liquid,
   c) the storage tanks, piping and dispensers shall be refilled with a Class II or IIIA liquid, or not less than 1 kg of dry ice for each 500 L of tank capacity shall be added to the storage tank,
   d) measurements of the liquid level of each storage tank containing a Class II or IIIA liquid shall be made at intervals not greater than one month, and a record of the measurements shall be retained in conformance with Article 2.2.1.2. of Division C, and
   e) fill pipe covers and covers over openings to measure liquid levels, dispensers and power controls shall be locked.

Application

A1. Procedure of preparation of tank to be taken out of service and of notification concerning an underground storage tank, connected piping, and dispensers, that are taken out of service for a period exceeding 180 days.

Exception:
   except as stated in
   - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
   - Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
   - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
   - the storage of aerosol products covered under Subsection 3.2.5.,
   - liquid hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
   - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To provide for notification of the authority having jurisdiction in order that appropriate measures can be reviewed and approved in connection with a storage tank for flammable liquids or combustible liquids that is taken out of service for more than 180 days.

I2. To state the application of Article 2.2.1.2. of Division C.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Procedures to be taken with respect to securing of fill pipe covers and covers over openings for measuring liquid levels, dispensers, and power controls at the close of and before the start of each season of operation for underground storage tank facilities for flammable liquids and combustible liquids that are operated on a seasonal basis.

Exception:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

A1. Procedures to be taken with respect to securing of fill pipe covers and covers over openings for measuring liquid levels, dispensers, and power controls at the close of and before the start of each season of operation for underground storage tank facilities for flammable liquids and combustible liquids that are operated on a seasonal basis.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,

I1. To limit the probability that the escape of liquid from tanks will go unnoticed, which could lead to appropriate measures not being taken, which could lead to the spread of liquid, which could lead to harm to the public.

I2. To limit the probability that vandalism, tampering or unwanted dispensing will lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Application

A1. Notification of the authority having jurisdiction about the proposed reuse of an underground storage tank for flammable liquids and combustible liquids.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

11. To enable the authority having jurisdiction to verify that an existing underground storage tank has been adequately tested before being placed back into service.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.3.15.1.(5)-01

Attribution - functional statement/objective Not applicable

Application

5) If an underground storage tank has been out of service for more than 12 months, the storage tank and piping shall be tested for leakage in conformance with Section 4.4.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To expand the application of Section 4.4. to a storage tank that has been out of service for more than 12 months.
Application and intent of Division B provisions

A1. Capping of tank piping or closing and securing of tank piping valves to isolate aboveground storage tanks for flammable liquids or combustible liquids, in buildings, structures and open areas, where such tanks will be out of service for a period not exceeding 180 days.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139, the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

1) When an aboveground storage tank will be out of service or unsupervised for a period not exceeding 180 days, the piping from the storage tank shall be capped or the valves that are necessary to achieve similar isolation of the storage tank shall be closed and securely locked.

I1. To limit the probability that vandalism, tampering or unwanted dispensing will lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Capping of tank piping or closing and securing of tank piping valves to isolate aboveground storage tanks for flammable liquids or combustible liquids, in buildings, structures and open areas, where such tanks will be out of service for a period not exceeding 180 days.

Exception:
- except as stated in - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

F34-OS1.1

Attribution - functional statement/objective

4.3.15.2.(1)-02

3) If an aboveground storage tank will be out of service for a period exceeding 180 days, a) all liquid and vapours shall be removed from the storage tank and its connected piping, and b) the storage tank markings shall clearly indicate that the storage tank is empty.

Application

A1. Removal of liquid and vapours from an aboveground storage tank for flammable liquids or combustible liquids and connected piping, in buildings, structures and open areas, if the tank will be out of service for a period exceeding 180 days.

A2. Markings, to denote that a tank is empty, of an aboveground storage tank for flammable liquids or combustible liquids and connected piping, in buildings, structures and open areas, if the tank will be out of service for a period exceeding 180 days.

Exception:

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability of the escape of liquid or vapour, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Internal inspection, before return to service, of an aboveground storage tank for flammable liquids or combustible liquids and connected piping, in buildings, structures and open areas, that has been out of service for a period exceeding 180 days.

A2. Notification of the authority having jurisdiction of the results of testing and the intention to return to service of an aboveground storage tank for flammable liquids or combustible liquids and connected piping, in buildings, structures and open areas, that has been out of service for a period exceeding 180 days.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

A1. Internal inspection, before return to service, of an aboveground storage tank for flammable liquids or combustible liquids and connected piping, in buildings, structures and open areas, that has been out of service for a period exceeding 180 days.

A2. Notification of the authority having jurisdiction of the results of testing and the intention to return to service of an aboveground storage tank for flammable liquids or combustible liquids and connected piping, in buildings, structures and open areas, that has been out of service for a period exceeding 180 days.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I. To limit the probability of the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

This applies to the disposal of storage tanks for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:
except as stated in:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the safety regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

1) Where storage tanks are to be permanently disposed of, sufficient openings shall be cut in the storage tank to render it unfit for further use. (See Appendix A.)

Intent

11. To limit the probability that tanks will be reused and then deteriorate or fail, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

This applies to the disposal of storage tanks for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”.
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that tanks will be reused and then deteriorate or fail, which could lead to the escape of liquid or vapour, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Maintenance in operation of corrosion protection systems for a storage tank for flammable liquids or combustible liquids, in buildings, structures and open areas during periods when the storage tank is temporarily out of service and during seasonal shutdowns.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
- the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

1) Corrosion protection systems shall be maintained in operating condition when a storage tank is temporarily out of service and during seasonal shutdowns.

Attribution - functional statement/objective F43,F80,F82-OH5

Intent

I1. To limit the probability that deterioration of the tanks will not be prevented, which could lead to the escape of liquid, which could lead to the spread of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Procedures related to treatment of an abandoned underground storage tank for flammable liquids or combustible liquids and associated connected piping.

This applies to:
- an underground storage tank that has no further use or has been out of service for 2 years,
- notification in writing to the authority having jurisdiction,
- removal from service of piping associated with an abandoned tank that is left in place,
- removal of flammable liquids and combustible liquids from the storage tank,
- purging of vapours from the storage tank.

Exception:
except as stated in:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to:
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of liquefied natural gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

F40-OH5

Attribution - functional statement/objective

4.3.16.1.(1)-01

CodeReference (including record number)

1) Except as permitted in Article 4.3.16.2., when an underground storage tank system has no further use or has been out of service for 2 years

a) the owner shall notify the authority having jurisdiction in writing at least 30 days before the removal of an underground storage tank system,

b) storage tanks shall have all flammable liquids and combustible liquids removed from them,

c) storage tanks shall be purged of vapours and removed from the ground (see Appendix A), and

d) the associated piping shall be

i) purged of vapours and the ends permanently sealed by capping or plugging, or

ii) removed from the ground.

Intent

I1. To limit the probability that appropriate measures would not be taken as a result of lack of involvement of the authority having jurisdiction, which could lead to an unsafe situation, which could lead to the escape of liquid, which could lead to harm to the public.

I2. To limit the probability that the loss of liquid would go unnoticed, which could lead to appropriate measures not being taken, which could lead to the spread of liquid, which could lead to the escape of liquid, which could lead to harm to the public.

I3. To limit the probability that vandalism, tampering or unwanted actions would lead to failure of the tank, which could lead to the escape of liquid, which could lead to harm to the public.

I4. To limit the probability of the escape of liquid from tanks no longer in service or during tank removal operations, which could lead to harm to the public.

I5. To limit the probability that tanks would be misused or reused and then deteriorate, which could lead to failure of the tank, which could lead to the escape of liquid, which could lead to harm to the public.
Application

1) Except as permitted in Article 4.3.16.2., when an underground storage tank system has no further use or has been out of service for 2 years a) the owner shall notify the authority having jurisdiction in writing at least 30 days before the removal of an underground storage tank system, b) storage tanks shall have all flammable liquids and combustible liquids removed from them, c) storage tanks shall be purged of vapours and removed from the ground (see Appendix A), and d) the associated piping shall be i) purged of vapours and the ends permanently sealed by capping or plugging, or ii) removed from the ground.

Application

A1. Procedures related to treatment of an abandoned underground storage tank for flammable liquids or combustible liquids and associated connected piping.

This applies to a) an underground storage tank that has no further use or has been out of service for 2 years, b) notification in writing to the authority having jurisdiction, c) removal from service of piping associated with an abandoned tank that is left in place, d) removal of flammable liquids and combustible liquids from the storage tank, and e) purging of vapours from the storage tank.

Exception: exceptions stated in i) Sentence 4.1.1.1.(2), which applies to unique hazards in process plants, ii) Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations", iii) the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects, iv) the storage of aerosol products covered under Subsection 3.2.5., v) liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act, vi) the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act, vii) the storage of and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that appropriate measures would not be taken as a result of lack of involvement of the authority having jurisdiction, which could lead to an unsafe situation, which could lead to fire, which could lead to explosion or the spread of fire to nearby buildings and facilities, which could lead to harm to persons.

I2. To limit the probability of the escape of liquid or vapour, which could lead to the ignition of vapour from a nearby ignition source, which could lead to explosion or the spread of fire to nearby buildings and facilities, which could lead to harm to persons.

I3. To limit the probability that vapour would accumulate in sufficient quantity to form an ignitable mixture, which could lead to the ignition of the vapour from a nearby ignition source, which could lead to explosion or the spread of fire to nearby buildings and facilities, which could lead to harm to persons.

I4. To limit the probability that the escape of liquid would go unnoticed, which could lead to appropriate measures not being taken, which could lead to the spread of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to spread to explosion or the spread of fire to nearby buildings and facilities, which could lead to harm to persons.

I5. To limit the probability that vandalism, tampering or unwanted actions would lead to the escape of liquid or vapour, which could lead to the ignition of vapour from a nearby ignition source, which could lead to explosion or the spread of fire to nearby buildings and facilities, which could lead to harm to persons.

I6. To limit the probability of the escape of liquid or vapour from tanks abandoned in place or during tank removal operations, which could lead to the ignition of vapour from a nearby ignition source, which could lead to explosion or the spread of fire to nearby buildings and facilities, which could lead to harm to persons.

I7. To limit the probability that tanks would be misused or reused and then deteriorate or fail, which could lead to the escape of liquid or vapour, which could lead to the ignition of vapour from a nearby ignition source, which could lead to explosion or the spread of fire to nearby buildings and facilities, which could lead to harm to persons.

CodeText

2) If soil surrounding the storage tanks described in Sentence (1) is found to be contaminated, the owner shall:

a) notify the authority having jurisdiction,

b) when requested, provide a report showing the extent of the site soil contamination, and

c) remove, treat or replace the contaminated soil in a manner acceptable to the authority having jurisdiction. (See A-4.1.6.3. in Appendix A.)

Application

A1. Removal, treatment, or replacement of contaminated soil surrounding an underground storage tank used for flammable liquids or combustible liquids that has no further use or has been out of service for 2 years.

Exception:

e) except as stated in:

- Sentence 4.1.1.1.2, which applies to unique hazards in process plants,

- Sentence 4.1.1.1.3, which applies to

  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",

  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,

  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,

  - the storage of aerosol products covered under Subsection 3.2.5.,

  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,

  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,

  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and

  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To enable the authority having jurisdiction to make appropriate decisions relating to the level of contamination of soil surrounding an abandoned underground storage tank.

I2. To limit the probability of escaped liquid in contaminated soil spreading beyond the location of the storage tank, which could lead to harm to the public.
1) If it is impracticable to remove an underground storage tank, the owner shall apply to the authority having jurisdiction for permission to abandon the storage tank in place.

Application

A1. Application for permission to abandon an underground storage tank in place if the tank has no further use or has been out of service for two years.

Exception:

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

11. To enable the authority having jurisdiction to assess the impracticability of removing the storage tank.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Information to be included in an application for permission to leave in place a storage tank used for flammable liquids or combustible liquids that has no further use or has been out of service for 2 years.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

2) An owner who makes application for permission to abandon a storage tank in place in accordance with Sentence (1) shall
a) describe in the application, the reasons why it is impracticable to remove the storage tank and provide other information that supports the application,
b) satisfy the authority having jurisdiction that the soil under and around the storage tank has not been contaminated with petroleum product, and
c) provide confirmation that the owner of the property is aware of the application and agrees with the plan to abandon the storage tank in place.

CodeText

2) An owner who makes application for permission to abandon a storage tank in place in accordance with Sentence (1) shall
a) describe in the application, the reasons why it is impracticable to remove the storage tank and provide other information that supports the application,
b) satisfy the authority having jurisdiction that the soil under and around the storage tank has not been contaminated with petroleum product, and
c) provide confirmation that the owner of the property is aware of the application and agrees with the plan to abandon the storage tank in place.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

1. To enable the authority having jurisdiction to make informed decisions relating to the practicability of leaving an abandoned underground storage tank in place.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Conditions to be considered by the authority having jurisdiction relating to permission to leave in place an underground storage tank used for flammable liquids or combustible liquids that has no further use or has been out of service for 2 years.

Exception:
except as stated in
- Sentence 4.1.1.1.2, which applies to unique hazards in process plants,
- Sentence 4.1.1.1.3, which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application
A1. Conditions to be considered by the authority having jurisdiction relating to permission to leave in place an underground storage tank used for flammable liquids or combustible liquids that has no further use or has been out of service for 2 years.

Exception:
except as stated in
- Sentence 4.1.1.1.2, which applies to unique hazards in process plants,
- Sentence 4.1.1.1.3, which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent
11. To assist the authority having jurisdiction in making an informed decision relating to the practicability of leaving an abandoned underground storage tank in place.
A1. Granting of permission by the authority having jurisdiction to leave in place an underground storage tank used for flammable liquids or combustible liquids that has no further use or has been out of service for two years.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application
4) If the authority having jurisdiction grants permission to abandon a storage tank in place in accordance with Sentence (3), the owner shall be notified in writing.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.3.16.2.(5)-01
Attribution - functional statement/objective F01-OS1.1

CodeText

5) If the authority having jurisdiction grants permission to abandon a storage tank in place in accordance with Sentence (3), the owner shall:

a) purge the storage tank of vapours to less than 10% of the lower explosive limit,
b) check for the presence of vapours using combustible gas detection equipment,
c) arrange for a certified person to enter the storage tank and conduct an internal inspection of the storage tank for perforations,
d) notify the authority having jurisdiction if the storage tank is perforated,
e) conduct additional investigations or take remedial actions in accordance with directions issued by the authority having jurisdiction,
f) remove sludge from the storage tank and dispose of it in a manner acceptable to the authority having jurisdiction,
g) make holes along the top of the storage tank large enough to permit filling the storage tank with inert material,
h) fill the storage tank with sand, gravel, concrete or other inert material acceptable to the authority having jurisdiction, and
i) remove associated piping from service in conformance with Clause 4.3.16.1.(1)(d).

Application

A1. Procedures to be undertaken by the owner in relation to an abandoned underground storage tank that is to be left in place, and that has no further use or has been out of service for 2 years.

Exception:
except as stated in:
- Sentence 4.3.16.2.(6), which applies to the conduct of precision leak tests in lieu of an internal inspection,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that appropriate measures would not be taken as a result of lack of involvement of the authority having jurisdiction, which could lead to an unsafe situation, which could lead to fire, which could lead to explosion or the spread of fire, which could lead to spread of fire to nearby buildings and facilities, which could lead to harm to persons.

I2. To limit the probability of the escape of vapour, which could lead to the ignition of vapour from a nearby ignition source, which could lead to explosion or the spread of fire, which could lead to spread of fire to nearby buildings and facilities, which could lead to harm to persons.

I3. To limit the probability that vapour would accumulate in sufficient quantity to form an ignitable mixture, which could lead to the ignition of the vapour from a nearby ignition source, which could lead to explosion or the spread of fire, which could lead to spread of fire to nearby buildings and facilities, which could lead to harm to persons.

I4. To limit the probability that the escape of liquid through perforations would go unnoticed, which could lead to appropriate measures not being taken, which could lead to the spread of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to explosion or the spread of fire, which could lead to spread of fire to nearby buildings and facilities, which could lead to harm to persons.

I5. To limit the probability that tanks would be misused or reused and then deteriorate or fail, which could lead to the escape of liquid or vapour, which could lead to the ignition of vapour from a nearby ignition source, which could lead to explosion or the spread of fire, which could lead to spread of fire to nearby buildings and facilities, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Procedures to be undertaken by the owner in relation to an abandoned underground storage tank that is to be left in place, and that has no further use or has been out of service for 2 years.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,

- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

A1. Procedures to be undertaken by the owner in relation to an abandoned underground storage tank that is to be left in place, and that has no further use or has been out of service for 2 years.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that the escape of liquid would go unnoticed, which could lead to appropriate measures not being taken, which could lead to the spread of liquid, which could lead to harm to the public.

I2. To limit the probability that tanks would be misused or reused and then deteriorate or fail, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.3.16.2.(6)-01
Attribution - functional statement/objective F40-OHS

A1. Precision leakage tests to be carried out to determine the condition of a storage tank for flammable liquids or combustible liquids that is to be left in place.

Exception:
- except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

6) If it is considered impracticable to carry out the internal inspection required by Clause (5)(c), the owner shall conduct precision leak tests if so directed by the authority having jurisdiction. (See Section 4.4.)

Application

F40-OH5

Attribution - functional statement/objective

4.3.16.2.(6)-01

Application

6) If it is considered impracticable to carry out the internal inspection required by Clause (5)(c), the owner shall conduct precision leak tests if so directed by the authority having jurisdiction. (See Section 4.4.)

Application

A1. Precision leakage tests to be carried out to determine the condition of a storage tank for flammable liquids or combustible liquids that is to be left in place.

Exception:
- except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To exempt an abandoned storage tank from internal inspection as required by Clause 4.3.17.3. (5)(c) on the basis that an alternative method of testing is used.

I2. To limit the probability that a storage tank that is to be abandoned in place is no longer liquid tight and has contaminated the surrounding soil, which could lead to the spread of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

A1. Leak detection testing and monitoring of storage tanks, sumps and piping systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.4.1.1.(2), which applies to storage tanks that have been taken out of service,
- Sentence 4.4.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries, and
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.
Application and intent of Division B provisions

Attribution - functional statement/objective Not applicable

CodeText

2) This Section shall not apply to storage tanks that have been taken out of service in compliance with the applicable provisions of Subsections 4.3.15. and 4.3.16.

Application

A1. Underground storage tanks that have been taken out of service.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries, and
- Sentence 4.5.1.1.(2), which applies to
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To exempt storage tanks that have been taken out of service in compliance with Subsection 4.3.1.5 and Subsection 4.3.1.6 from the requirements of Section 4.1.1.

I2. To direct Alberta Fire Code 2006 users to Subsection 4.3.1.5 and Subsection 4.3.1.6.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.4.1.2.(1)-01
Attribution - functional statement/objective F82-OH5

CodeText

1) Every storage tank, piping system and sump, including those at fuel-dispensing stations, shall be tested and monitored for leaks in conformance with Tables 4.4.1.2.A. to 4.4.1.2.E., which establish the minimum requirements regarding the frequency and methods to be used for
a) commissioning testing,
b) subsequent in-service monitoring, and
c) testing when a leak is suspected.

Application

A1. Leak detection testing and monitoring of storage tanks and sumps for flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. Leak detection testing and monitoring of piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:

- except as stated in
  - Sentence 4.4.1.1.1.(2), which applies to storage tanks that have been taken out of service,
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
    - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries, and
  - Sentence 4.5.1.1.(2), which applies to
    - tubing or casings and piping for oil or gas wells,
    - transmission pipelines,
    - piping for vehicles, aircraft, watercraft and portable or stationary engines,
    - piping systems in distilleries, and
    - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that defects in storage tanks, sumps or piping systems or the escape of liquid will go unnoticed, which could lead to appropriate measures not being taken, which could lead to the spread of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

4.4.1.2.(1)-02

A1. Leak detection testing and monitoring of storage tanks and sumps for flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. Leak detection testing and monitoring of piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in - Sentence 4.4.1.1.(2), which applies to storage tanks that have been taken out of service,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries, and
- Sentence 4.5.1.1.(2), which applies to - tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Application

4.4.1.2.(1)-02

A1. Leak detection testing and monitoring of storage tanks and sumps for flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. Leak detection testing and monitoring of piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

CodeReference (including record number)

1) Every storage tank, piping system and sump, including those at fuel-dispensing stations, shall be tested and monitored for leaks in conformance with Tables 4.4.1.2.A. to 4.4.1.2.E., which establish the minimum requirements regarding the frequency and methods to be used for:
- commissioning testing,
- subsequent in-service monitoring, and
- testing when a leak is suspected.

Application

F82-OP1.1

I1. To limit the probability that defects in storage tanks, sumps or piping systems or the escape of liquid will go unnoticed, which could lead to appropriate measures not being taken, which could lead to the spread of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Application

A1. Leak detection testing and monitoring of storage tanks and sumps for flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. Leak detection testing and monitoring of piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in -(Sentence 4.4.1.1.(2), which applies to storage tanks that have been taken out of service, -(Sentence 4.1.1.1.(2), which applies to unique hazards in process plants, -(Sentence 4.1.1.1.(3), which applies to -(the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations", -(appliances and their ancillary equipment within the scope of CAN/CSA-B139, -(the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects, -(the storage of aerosol products covered under Subsection 3.2.5, -(liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act, -(the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act, -(liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and -(the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55, -(Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries, and -(Sentence 4.5.1.1.(2), which applies to -(tubing or casings and piping for oil or gas wells, -(transmission pipelines, -(piping for vehicles, aircraft, watercraft and portable or stationary engines, -(piping systems in distilleries, and -(piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that defects in storage tanks, sumps or piping systems or the escape of liquid will go unnoticed, which could lead to appropriate measures not being taken, which could lead to the spread of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Leak detection testing and monitoring of storage tanks and sumps for flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. Leak detection testing and monitoring of piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:

1) Every storage tank, piping system and sump, including those at fuel-dispensing stations, shall be tested and monitored for leaks in conformance with Tables 4.4.1.2.A to 4.4.1.2.E., which establish the minimum requirements regarding the frequency and methods to be used for:
   - commissioning testing,
   - subsequent in-service monitoring, and
   - testing when a leak is suspected.

Application

A1. Leak detection testing and monitoring of storage tanks and sumps for flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. Leak detection testing and monitoring of piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:

- Sentence 4.4.1.1.(2), which applies to storage tanks that have been taken out of service,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to:
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the storage of aerosol products covered under Subsection 3.2.5,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to:
  - storage tanks and containers for distilled beverage alcohol at distilleries, and
  - Sentence 4.5.1.1.(2), which applies to:
    - tubing or casings and piping for oil or gas wells,
    - transmission pipelines,
    - piping for vehicles, aircraft, watercraft and portable or stationary engines,
    - piping systems in distilleries, and
    - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To direct Alberta Fire Code 2006 users to Table 4.4.1.2.A. to Table 4.4.1.2.E.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Leak detection testing and monitoring of storage tanks and sumps for flammable liquids or combustible liquids.

A2. Leak detection testing and monitoring of piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:
except as stated in
- Sentence 4.4.1.1.(2), which applies to storage tanks that have been taken out of service,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries, and
- Sentence 4.5.1.1.(2), which applies to the production, storage or handling of liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Application

Not applicable

Attribution - functional statement/objective

2) The methods referred to in Sentence (1) shall conform to Subsections 4.4.2. to 4.4.4.

Intent

I1. To direct Alberta Fire Code 2006 users to Subsections 4.4.2. to 4.4.4.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Commissioning testing of storage tanks and testing of sumps for flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. Commissioning testing of piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:

- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries, and
- Sentence 4.5.1.1.(2), which applies to piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in distilleries, and
- the storage of liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of flammable liquids or combustible liquids and appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- storage tanks that have been taken out of service,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- storage tanks that have been taken out of service,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- storage tanks that have been taken out of service,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- storage tanks that have been taken out of service,

Alberta Fire Code 2006

Application and intent of Division B provisions

A1. Commissioning testing of storage tanks and testing of sumps for flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. Commissioning testing of piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in - Sentence 4.4.1.1.(2), which applies to storage tanks that have been taken out of service,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries, and
- Sentence 4.5.1.1.(2), which applies to - tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that defects in storage tanks, sumps or piping systems or the escape of liquid will go unnoticed, which could lead to appropriate measures not being taken, which could lead to the spread of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

**CodeText**

3) The commissioning testing referred to in Sentence (1) shall be performed at the time of installation

a) once backfill and surfacing have been completed but before being put into service, in the case of an underground storage tank or underground piping system,

b) before being put into service, in the case of an aboveground storage tank or exposed piping system, and

c) once the final surface materials have been installed but before being put into service, in the case of a sump.

**Application**

A1. Commissioning testing of storage tanks and testing of sumps for flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. Commissioning testing of piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

**Exception:**

- except as stated in
  - Sentence 4.4.1.1.(2), which applies to storage tanks that have been taken out of service,
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
    - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries, and
  - Sentence 4.5.1.1.(2), which applies to
    - tubing or casings and piping for oil or gas wells,
    - transmission pipelines,
    - piping for vehicles, aircraft, watercraft and portable or stationary engines,
    - piping systems in distilleries, and
    - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

**Intent**

I1. To limit the probability that defects in storage tanks, sumps or piping systems or the escape of liquid will go unnoticed, which could lead to appropriate measures not being taken, which could lead to the spread of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Frequency of in-service monitoring of storage tanks and sumps for flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. Frequency of in-service monitoring of piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:

- Sentence 4.4.1.1.(2), which applies to storage tanks that have been taken out of service,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries, and
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

11. To clarify the date from which the frequency of the in-service monitoring is to be calculated.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Timing of corrective action when a loss of liquid or a gain of water is indicated [by any of the leak detection measures described in Sentence 4.4.1.2.(1)] in storage tanks and sumps for flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. Timing of corrective action when a loss of liquid or a gain of water is indicated [by any of the leak detection measures described in Sentence 4.4.1.2.(1)] in piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.4.1.1.(2), which applies to storage tanks that have been taken out of service,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries, and
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Application

I1. To state the application of Sentence 4.4.1.2.(1) in the event there is evidence of a loss of liquid or a gain of water in the storage tank, sump or piping system.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Requirements for leak detection testing and monitoring of storage tanks and sumps for flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. Requirements for leak detection testing and monitoring of piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.4.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the transportation of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries, and
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells, transmission pipelines, piping for vehicles, aircraft, watercraft and portable or stationary engines, piping systems in distilleries, and piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

11. To clarify that the testing and monitoring requirements identified in this Section should not preclude the use of new technologies.
Alberta Fire Code 2006

Application and intent of Division B provisions

CodeReference (including record number) 4.4.1.3.(1)-01
Attribution - functional statement/objective F82-OH5

CodeText

1) When a leak detection test required by this Section detects a leak in a storage tank, piping system or sump,
   a) the leaking components or system shall be
      i) repaired and tested,
      ii) replaced, or
      iii) removed, and
   b) the escaped liquid shall be removed in conformance with Subsection 4.1.6.

Application

A1. Remedial action for leaking storage tanks and sumps for flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. Remedial action for leaking piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:
   except as stated in
   - Sentence 4.4.1.1.(2), which applies to storage tanks that have been taken out of service,
   - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
   - Sentence 4.1.1.1.(3), which applies to
      - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
      - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
      - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
      - the storage of aerosol products covered under Subsection 3.2.5.,
   - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
   - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
   - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
   - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
   - Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries, and
   - Sentence 4.5.1.1.(2), which applies to
      - tubing or casings and piping for oil or gas wells,
      - transmission pipelines,
      - piping for vehicles, aircraft, watercraft and portable or stationary engines,
      - piping systems in distilleries, and
      - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that appropriate measures will not be taken on leaking storage tanks, sumps or piping systems, which could lead to the spread of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.4.1.3.(1)-02

Attribution - functional statement/objective F82-OP1.1

A1. Remedial action for leaking storage tanks and sumps for flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. Remedial action for leaking piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:

- Sentence 4.4.1.1.(2), which applies to storage tanks that have been taken out of service,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries, and
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Application

1) When a leak detection test required by this Section detects a leak in a storage tank, piping system or sump,
   a) the leaking components or system shall be
      i) repaired and tested,
      ii) replaced, or

- Sentence 4.1.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.1.(3), which applies to - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,

- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries, and
- Sentence 4.5.1.1.1.(2), which applies to - tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Application

1) When a leak detection test required by this Section detects a leak in a storage tank, piping system or sump, a) the leaking components or system shall be i) repaired and tested,
- ii) replaced, or
- iii) removed, and
b) the escaped liquid shall be removed in conformance with Subsection 4.1.6.

Intent

1. To limit the probability that appropriate measures will not be taken on leaking storage tanks, sumps or piping systems, which could lead to the spread of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Retention of records of leak detection tests performed on storage tanks and sumps for flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. Retention of records of leak detection tests performed on piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.4.1.1.(2), which applies to storage tanks that have been taken out of service,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries, and
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent
- To direct Alberta Fire Code 2006 users to Article 2.2.1.2. of Division C for requirements regarding the keeping of records of tests performed on storage tanks, sumps and piping systems.
Application and intent of Division B provisions

Application

A1. Leak detection testing and monitoring of storage tanks and sumps for flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. Leak detection testing and monitoring of piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception: except as stated in
- Sentence 4.4.1.1.(2), which applies to storage tanks that have been taken out of service,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries, and
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

11. To state the application of Subsection 4.4.2.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.4.2.1.(2)-01
Attribution - functional statement/objective F82.F01-OP1.1

CodeText

2) Inventory reconciliation referred to in this Section

a) shall follow the procedures established in the United States Environmental Protection Agency (EPA) pamphlet, EPA 510-B-93-004, "Doing Inventory Control Right for Underground Storage Tanks," which also allows calculations for the inventory reconciliation procedure to be completed using an electronic methodology referred to as automatic tank gauging, and

b) shall conform to Article 4.4.4.1.

Application

A1. Procedures for the inventory reconciliation of storage tanks and sumps for flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. Procedures for the inventory reconciliation of piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:

except as stated in

- Sentence 4.4.1.1.(2), which applies to storage tanks that have been taken out of service,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries, and
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that defects in storage tanks, sumps and piping systems or the escape of liquid will go unnoticed, which could lead to appropriate measures not being taken, which could lead to the spread of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.

I2. To limit the probability that the use of leakage testing equipment will lead to the creation of ignition sources, which could lead to a fire or explosion, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

CodeText

2) Inventory reconciliation referred to in this Section
a) shall follow the procedures established in the United States Environmental Protection Agency (EPA) pamphlet, EPA 510-B-93-004, "Doing Inventory Control Right for Underground Storage Tanks," which also allows calculations for the inventory reconciliation procedure to be completed using an electronic methodology referred to as automatic tank gauging, and
b) shall conform to Article 4.4.4.1.

Application

A1. Procedures for the inventory reconciliation of storage tanks and sumps for flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. Procedures for the inventory reconciliation of piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:

- except as stated in
  - Sentence 4.4.1.1.(2), which applies to storage tanks that have been taken out of service,
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries, and
  - Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Procedures for the use of monitoring wells for storage tanks and sumps for flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. Procedures for the use of monitoring wells for piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception: except as stated in
- Sentence 4.4.1.1.(2), which applies to storage tanks that have been taken out of service,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries, and
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells, transmission pipelines, piping for vehicles, aircraft, watercraft and portable or stationary engines, piping systems in distilleries, and piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

CodeText

3) The use of monitoring wells shall follow the procedures established in the CCME document, “Environmental Code of Practice for Aboveground and Underground Storage Tank Systems Containing Petroleum Products and Allied Petroleum Products.” (See Appendix A.)

Application

I1. To limit the probability that defects in storage tanks, sumps or piping systems or the escape of liquid will go unnoticed, which could lead to appropriate measures not being taken, which could lead to the spread of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.

I2. To limit the probability that the use of leakage testing equipment will lead to the creation of ignition sources, which could lead to a fire or explosion, which could lead to damage to the building or facility.
Application and intent of Division B provisions

3) The use of monitoring wells shall follow the procedures established in the CCME document, “Environmental Code of Practice for Aboveground and Underground Storage Tank Systems Containing Petroleum Products and Allied Petroleum Products.” (See Appendix A.)

Application

A1. Procedures for the use of monitoring wells for storage tanks and sumps for flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. Procedures for the use of monitoring wells for piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:

except as stated in
- Sentence 4.4.1.1.(2), which applies to storage tanks that have been taken out of service,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries, and
- Sentence 4.5.1.1.(2), which applies to
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that defects in storage tanks, sumps or piping systems or the escape of liquid will go unnoticed, which could lead to appropriate measures not being taken, which could lead to the spread of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons.

I2. To limit the probability that the use of leakage testing equipment will lead to the creation of ignition sources, which could lead to a fire or explosion, which could lead to harm to persons.
Application and intent of Division B provisions

CodeText

6) A continuous in-tank leak detection system shall conform to good engineering practice and meet the requirements of a precision leak detection test. (See Appendix A.)

Application

A1. Procedures for continuous in-tank leak detection of storage tanks for flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. Procedures for continuous in-tank leak detection of piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception: except as stated in
- Sentence 4.4.1.1.(2), which applies to storage tanks that have been taken out of service,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries, and
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that defects in storage tanks or piping systems or the escape of liquid will go unnoticed, which could lead to appropriate measures not being taken, which could lead to the spread of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons.

I2. To limit the probability that the use of leakage testing equipment will lead to the creation of ignition sources, which could lead to a fire or explosion, which could lead to harm to persons.

- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries, and
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that defects in storage tanks or piping systems or the escape of liquid will go unnoticed, which could lead to appropriate measures not being taken, which could lead to the spread of liquid, which could lead to harm to the public.

I2. To limit the probability that the use of leakage testing equipment will lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

CodeText

7) High-tech secondary containment monitoring referred to in this Section shall include the use of an automatic device that
a) conforms to Clause (5)(a) or (b), and
b) continuously monitors the interstitial space between the inner tank or inner piping and the secondary containment.

(See Sentence 4.3.7.7.(1).) (See Appendix A for low-tech method.)

Application

A1. High-tech secondary containment monitoring of storage tanks for flammable liquids or combustible liquids, in buildings, structures and open.
A2. High-tech secondary containment monitoring of piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:

except as stated in
- Sentence 4.4.1.1.1.(2), which applies to storage tanks that have been taken out of service,
- Sentence 4.1.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries, and
- Sentence 4.5.1.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that defects in storage tanks or piping systems or the escape of liquid will go unnoticed, which could lead to appropriate measures not being taken, which could lead to the spread of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
I2. To limit the probability that the use of leakage testing equipment will lead to the creation of ignition sources, which could lead to a fire or explosion, which could lead to damage to the building or facility.

I1. To limit the probability that defects in storage tanks or sumps or the escape of liquid will go unnoticed, which could lead to appropriate measures not being taken, which could lead to the spread of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons.

I2. To limit the probability that the use of leakage testing equipment will lead to the creation of ignition sources, which could lead to a fire or explosion, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Code/Reference (including record number) 4.4.2.1.(10)-02
Attribution - functional statement/objective F82-OH5

CodeText

A.1 Requirements for conducting precision leak detection tests on underground storage tanks and sumps for flammable liquids or combustible liquids.

Exception:
- except as stated in:
  - Sentence 4.4.1.1.(2), which applies to storage tanks that have been taken out of service,
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to:
    - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.1,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of CUB Guide 55,
    - Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries, and
    - Sentence 4.5.1.1.(2), which applies to:
      - tubing or casings and piping for oil or gas wells,
      - transmission pipelines,
      - piping for vehicles, aircraft, watercraft and portable or stationary engines,
      - piping systems in distilleries, and
      - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Application

1.1 To limit the probability that defects in storage tanks or sumps or the escape of liquid will go unnoticed, which could lead to appropriate measures not being taken, which could lead to the spread of liquid, which could lead to harm to the public.

10) The precision leak detection test for underground storage tanks that is referred to in this Section shall:

a) be capable of detecting a tank leak rate as small as 0.38 L/h within 24 h with a probability of detection of 0.95 or greater and a probability of false alarm of 0.05 or less,

b) conform to the performance requirements of:
   - ULC/ORD-C58.12, “Leak Detection Devices (Volumetric Type) for Underground Flammable Liquid Storage Tanks,” or
   - ULC/ORD-C58.14, “Non-Volumetric Leak Detection Devices for Underground Flammable Liquid Storage Tanks” (see Appendix A), and

c) be conducted by an individual who has been trained in the proper care and use of the test equipment and the operating procedures.

(See Appendix A and also Sentences 4.4.3.1.(2) and (3).)

I1. To limit the probability that defects in storage tanks or sumps or the escape of liquid will go unnoticed, which could lead to appropriate measures not being taken, which could lead to the spread of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

A1. Requirements for leak detection in piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries, and
- Sentence 4.5.1.1.(2), which applies to
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that defects in piping systems or the escape of liquid will go unnoticed, which could lead to appropriate measures not being taken, which could lead to the spread of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.

I2. To limit the probability that the use of leakage testing equipment will lead to the creation of ignition sources, which could lead to a fire or explosion, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Requirements for leak detection in piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries, and
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that defects in piping systems or the escape of liquid will go unnoticed, which could lead to appropriate measures not being taken, which could lead to the spread of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons.

I2. To limit the probability that the use of leakage testing equipment will lead to the creation of ignition sources, which could lead to a fire or explosion, which could lead to harm to persons.
Application and intent of Division B provisions

Application

A1. Requirements for leak detection in piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of dangerous goods regulations;
- appliances and their ancillary equipment within the scope of the transportation of dangerous goods regulations;
- the storage of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”;
- appliances and their ancillary equipment within the scope of CAN/CSA-B139;
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects;
- the storage of aerosol products covered under Subsection 3.2.5.;
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries, and
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that defects in piping systems or the escape of liquid will go unnoticed, which could lead to appropriate measures not being taken, which could lead to the spread of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Leak detection testing and monitoring of piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:
except as stated in
- Sentence 4.4.1.1.(2), which applies to storage tanks that have been taken out of service,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries, and
- Sentence 4.5.1.1.(2), which applies to
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

II. To limit the probability that defects in piping systems or the escape of liquid will go unnoticed, which could lead to appropriate measures not being taken, which could lead to the spread of liquid, which could lead to harm to the public.
A1. Leak detection testing and monitoring of piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.4.1.1.(2), which applies to storage tanks that have been taken out of service,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries, and
- Sentence 4.5.1.1.(2), which applies to transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

I1. To limit the probability that defects in piping systems or the escape of liquid will go unnoticed, which could lead to appropriate measures not being taken, which could lead to the spread of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.

Attribution - functional statement/objective

Not applicable

Application

A1. Leak detection testing and monitoring of storage tanks and sumps for flammable liquids or combustible liquids, in buildings, structures and open areas.

2) If a precision leak detection test referred to in Sentence 4.4.2.1.(10) detects a leak rate exceeding 0.38 L/h on an underground storage tank, the tank shall be considered to be leaking.

CodeText

I1. To establish the leakage rate at which a tank is considered to be leaking when a precision leak detection test referred to in Sentence 4.4.2.1.(10) is performed.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Pressure applied to tanks during leak detection testing of storage tanks for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.4.1.1.(2), which applies to storage tanks that have been taken out of service,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries, and
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

A1. Pressure applied to tanks during leak detection testing of storage tanks for flammable liquids or combustible liquids, in buildings, structures and open areas.

Application

Intention
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

CodeReference (including record number) 4.4.3.2.(1)-01
Attribution - functional statement/objective F01-OS1.1

CodeText

1) Pneumatic leak detection tests using compressed air shall not be performed on storage tanks and piping systems having once contained flammable liquids or combustible liquids.

Application

A1. Use of compressed air or other non-inert gases for the pneumatic leak detection testing of storage tanks and sumps for flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. Use of compressed air or other non-inert gases for the pneumatic leak detection testing of piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:

- except as stated in Sentence 4.4.1.1.(2), which applies to storage tanks that have been taken out of service,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries, and
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines, and
- piping systems in distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability of contact between the liquid and a non-inert gas (e.g. oxygen), which could lead to an adverse reaction, which could lead to the ignition of vapour, which could lead to a fire or explosion, which could lead to harm to persons.
Application and intent of Division B provisions

Attribution - functional statement/objective F81-OS1.1

CodeText

2) Except as provided in Sentence (1), pneumatic leak detection tests using compressed air or an inert gas shall include the application of soap and water to the tank and piping surface, fittings, joints and connections to help in the detection of leaks.

Application

A1. Pneumatic leak detection testing of storage tanks and sumps for flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. Pneumatic leak detection testing of piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:
except as stated in
- Sentence 4.4.1.1.(2), which applies to storage tanks that have been taken out of service,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries, and
- Sentence 4.5.1.1.(2), which applies to
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that leakage will not be detected, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

A1. Pneumatic leak detection testing of underground storage tanks for flammable liquids or combustible liquids.

A2. Pneumatic leak detection testing of underground piping and transfer systems for flammable liquids or combustible liquids.

Exception:

- except as stated in Sentence 4.4.1.1.(2), which applies to storage tanks that have been taken out of service,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries, and
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

1. To clarify when pneumatic testing on underground storage tanks and underground piping systems must be performed.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application: A1. Pneumatic leak detection testing of field-erected aboveground storage tanks for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent: I1. To limit the probability that excessive internal pressure will lead to failure of the tank, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Pneumatic leak detection testing of field-erected aboveground storage tanks for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that excessive internal pressure will lead to failure of the tank, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Leak detection testing of storage tanks and sumps for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.4.1.1.(2), which applies to storage tanks that have been taken out of service, and
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations";
- appliances and their ancillary equipment within the scope of CAN/CSA-B139;
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

1) Where a pneumatic leak detection test is performed on a storage tank, the tank shall be considered to be leaking if the test indicates a pressure drop within 2 h of establishing steady temperature conditions and removing the source of pressure.

11. To establish under what conditions a tank is considered to be leaking.
Application and intent of Division B provisions

A1. Leak detection testing of storage tanks and sumps for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in - Sentence 4.4.1.1.(2), which applies to storage tanks that have been taken out of service, and
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

Not applicable

Intent

I1. To specify the type of instrument calibration for pneumatic tests.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

CodeReference (including record number) 4.4.3.3.(3)-01
Attribution - functional statement/objective F20,F81-OS1.1

CodeText

3) Where a pneumatic leak detection test is conducted before an underground storage tank is backfilled, in the case of a new tank, or after the tank is uncovered, in the case of a previously installed tank, the test pressure shall be in conformance with the production testing requirements of a) ULC-S603, “Steel Underground Tanks for Flammable and Combustible Liquids,” or b) ULC-S615, “Reinforced Plastic Underground Tanks for Flammable and Combustible Liquids.”

Application

A1. Leak detection testing of storage tanks and sumps for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception: except as stated in
- Sentence 4.4.1.1.(2), which applies to storage tanks that have been taken out of service, and
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability of excessive pressure in tanks during testing, which could lead to damage to the tank, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Leak detection testing of storage tanks and sumps for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:
- Sentence 4.4.1.1.(2), which applies to storage tanks that have been taken out of service, and
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

A1. Leak detection testing of storage tanks and sumps for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:
- Sentence 4.4.1.1.(2), which applies to storage tanks that have been taken out of service, and
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells, transmission pipelines, piping for vehicles, aircraft, watercraft and portable or stationary engines, piping systems in distilleries, and piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Application

Not applicable

Attribution - functional statement/objective

I.1. To direct Alberta Fire Code 2006 users to Sentences 4.4.3.4.(3) to 4.4.3.4.(9) for requirements relating to pressure decline tests on piping systems.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

A1. Leak detection testing and monitoring of piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries, and
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent
I1. To limit the probability that contents will escape during pressure testing, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Leak detection testing and monitoring of piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of Dangerous Goods Regulations,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries, and
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent
I1. To limit the probability that contents will escape during pressure testing, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons.
A1. Leak detection testing of piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:

- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Leak detection testing of piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
    - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries, and
  - Sentence 4.5.1.1.(2), which applies to
    - tubing or casings and piping for oil or gas wells,
    - transmission pipelines,
    - piping for vehicles, aircraft, watercraft and portable or stationary engines,
    - piping systems in distilleries, and
    - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

11. To limit the probability that contents will escape during pressure testing, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Stabilization period during leak detection testing of piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:

- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants;
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations";
- appliances and their ancillary equipment within the scope of CAN/CSA-B139;
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects;
- the storage of aerosol products covered under Subsection 3.2.5., liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries, and
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells, transmission pipelines, piping for vehicles, aircraft, watercraft and portable or stationary engines, piping systems in distilleries, and piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that defects in piping systems or the escape of liquid will go unnoticed, which could lead to appropriate measures not being taken, which could lead to the spread of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Stabilization period during leak detection testing of piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:

- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

II. To limit the probability that defects in piping systems or the escape of liquid will go unnoticed, which could lead to appropriate measures not being taken, which could lead to the spread of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Application

A1. Maximum test pressures (gauge) to be used when performing pressure decline tests on piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries, and
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

11. To establish the maximum test pressures (gauge) to be used on piping systems.

CodeText

8) Test pressures shall be the greater of 350 kPa (gauge) or 1.5 times the maximum operating pressure, and not exceed the piping manufacturer’s test specifications.

Application

Not applicable

1) Liquid media leak detection testing of piping systems shall conform to Sentences (2) to (9).

Application

A1. Liquid media leak detection testing of piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:

- as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries, and
  - Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

11. To state the application of Article 4.4.3.5.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Devices and methods for testing piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries, and
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that defects in piping systems or the escape of liquid will go unnoticed, which could lead to appropriate measures not being taken, which could lead to the spread of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.

I2. To limit the probability that the use of leakage testing equipment will lead to the creation of ignition sources, which could lead to a fire or explosion, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Devices and methods for testing piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception: except as stated in:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries, and
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that defects in piping systems or the escape of liquid will go unnoticed, which could lead to appropriate measures not being taken, which could lead to the spread of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons.

I2. To limit the probability that the use of leakage testing equipment will lead to the creation of ignition sources, which could lead to a fire or explosion, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Conducting of tests – by trained personnel – on piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of liquefied flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries, and
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that defects in piping systems or the escape of liquid will go unnoticed, which could lead to appropriate measures not being taken, which could lead to the spread of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.

I2. To limit the probability that the use of leakage testing equipment will lead to the creation of ignition sources, which could lead to a fire or explosion, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Conducting of tests – by trained personnel – on piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries, and
- Sentence 4.5.1.1.(2), which applies to - tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines, piping systems in distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that defects in piping systems or the escape of liquid will go unnoticed, which could lead to appropriate measures not being taken, which could lead to the spread of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons.

I2. To limit the probability that the use of leakage testing equipment will lead to the creation of ignition sources, which could lead to a fire or explosion, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Conducting of tests – by trained personnel – on piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,

I1. To limit the probability that defects in piping systems or the escape of liquid will go unnoticed, which could lead to appropriate measures not being taken, which could lead to the spread of liquid, which could lead to harm to the public.
A1. Stabilization of temperature of liquid during testing of piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:
except as stated in:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants;
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”;
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139;
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects;
  - the storage of aerosol products covered under Subsection 3.2.5.;
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act;
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act;
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries, and
- Sentence 4.5.1.1.(2), which applies to
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Stabilization of temperature of liquid during testing of piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception: except as stated in:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries, and
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Application

4) A sufficient amount of time shall be allocated to stabilize the temperature of the liquid throughout the volume of the piping during the test.

Intent

I1. To limit the probability that defects in piping systems or the escape of liquid will go unnoticed, which could lead to appropriate measures not being taken, which could lead to the spread of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Maximum pressure (gauge) of liquid during testing of piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries, and
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Application

F20,F81-OS1.1

A1. Maximum pressure (gauge) of liquid during testing of piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:
- except as provided in Sentences (6) and (7), test pressure shall a) be the greater of 350 kPa (gauge) or 1.5 times the maximum operating pressure, and
b) not exceed the piping manufacturer’s test specifications.

Intent

11. To limit the probability of excessive pressure in the piping system during testing, which could lead to damage to the piping system, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Maximum pressure (gauge) of liquid during testing of piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants;
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations";
- appliances and their ancillary equipment within the scope of CAN/CSA-B139;
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects;
- the storage of aerosol products covered under Subsection 3.2.5;
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act;
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act;
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55;
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries, and
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells, transmission pipelines, piping for vehicles, aircraft, watercraft and portable or stationary engines, piping systems in distilleries, and piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To supersede the test pressure limits stated in Sentence 4.4.3.5.(1), if certain conditions are met [i.e. the piping system is designed for higher pressures].
Application and intent of Division B provisions

Alberta Fire Code 2006

Application
A1. Isolation of pumps or components in piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries, and
- Sentence 4.5.1.1.(2), which applies to
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent
11. To limit the probability of excessive pressure in pumps and components in the piping system, which could lead to failure of the piping system, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Isolation of pumps or components in piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:

except as stated in

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries, and
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

7) Where test pressures exceed the design pressures for pumps or similar components connected to the piping system being tested, such pumps or components shall be isolated from the test procedure.

F81-OP1.1

Application

A1. Isolation of pumps or components in piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:

except as stated in

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries, and
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

11. To limit the probability of excessive pressure in pumps and components in the piping system, which could lead to failure of the piping system, which could lead to the escape of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
A1. Isolation of pumps or components in piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries, and
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.
8) Class I liquids shall not be used for pressure testing piping systems, except that pressure piping normally containing Class I liquids is permitted to be tested with such liquids at pressures not exceeding their maximum operating pressures.

Exception:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to 
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries, and
- Sentence 4.5.1.1.(2), which applies to 
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Application
A1. Use of Class I liquids for pressure testing piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

11. To limit the probability that Class I liquids will escape during pressure testing, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons.
A1. Leak rate to be used to determine if piping and transfer systems for flammable liquids or combustible liquids are leaking, in buildings, structures and open areas.

Exception:

- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries, and
  - Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

CodeText

9) The pipe shall be considered to be leaking if the leak rate exceeds 0.38 L/h.

Application

4.4.3.5.(9)-01 The pipe shall be considered to be leaking if the leak rate exceeds 0.38 L/h.

Intent

I1. To establish the leak rate at which a piping system is considered to be leaking.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Static liquid media leak detection testing of sumps for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception: except as stated in:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries.

Intent

11. To state the application of Article 4.4.3.6.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application
A1. Static liquid media leak detection testing of sumps for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries.

Intent
I1. To limit the probability that the escape of liquid from sumps will go unnoticed, which could lead to appropriate measures not being taken, which could lead to the spread of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Static liquid media leak detection testing of sumps for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries.

Intent
II. To limit the probability that the escape of liquid from sumps will go unnoticed, which could lead to appropriate measures not being taken, which could lead to the spread of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.

2) The liquid used for the test shall
a) exceed the elevation of the piping and other points of entry into the sump, and
b) not be a flammable liquid or a combustible liquid.

CodeText
2) The liquid used for the test shall

Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Retention of records on the inventory reconciliation of storage tanks and sumps for flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. Retention of records on the inventory reconciliation of piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.4.1.1.(2), which applies to storage tanks that have been taken out of service,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries, and
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

4) A record of the measurements for each storage tank and of the computations described in Sentence (3) shall be retained, in conformance with Article 2.2.1.2. of Division C.

Application

A1. Retention of records on the inventory reconciliation of storage tanks and sumps for flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. Retention of records on the inventory reconciliation of piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in:
  - Sentence 4.4.1.1.(2), which applies to storage tanks that have been taken out of service,
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries, and
  - Sentence 4.5.1.1.(2), which applies to:
    - tubing or casings and piping for oil or gas wells,
    - transmission pipelines,
    - piping for vehicles, aircraft, watercraft and portable or stationary engines,
    - piping systems in distilleries, and
    - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

To direct Alberta Fire Code 2006 users to Article 2.2.1.2. of Division C for requirements relating to record keeping.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

CodeReference (including record number)  4.4.4.1.(5)-01

CodeText

5) When required by the authority having jurisdiction the record referred to in Sentence (4) shall be the subject of an audit performed in a manner acceptable to the authority having jurisdiction.

Application

A1. Audit of records on the inventory reconciliation of storage tanks and sumps for flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. Audit of records on the inventory reconciliation of piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:

- except as stated in - Sentence 4.4.1.1.(2), which applies to storage tanks that have been taken out of service,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries, and
- Sentence 4.5.1.1.(2), which applies to - tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

11. To confirm that the records of inventory reconciliation have been prepared in a manner acceptable to the authority having jurisdiction.
Application and intent of Division B provisions

CodeText

1) Where continuous leak detection is provided on an underground piping system, it shall conform to ULC/ORD-C107.12, "Line Leak Detection Devices for Flammable Liquid Piping."

Application

A1. Continuous leak detection on underground piping and transfer systems for flammable liquids or combustible liquids.

Exception:

- except as stated in - Sentence 4.4.1.1.(2), which applies to storage tanks that have been taken out of service,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries, and
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that defects in underground piping systems or the escape of liquid will go unnoticed, which could lead to appropriate measures not being taken, which could lead to the spread of liquid, which could lead to harm to the public.

I2. To limit the probability that leakage detection equipment will not meet appropriate standards, which could lead to the escape of liquid going unnoticed, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Continuous leak detection on underground piping and transfer systems for flammable liquids or combustible liquids.

Exception:
- except as stated in Sentence 4.4.1.1.(2), which applies to storage tanks that have been taken out of service,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Subsection 4.10.3., which applies to storage tanks and containers for distilled beverage alcohol at distilleries, and
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that defects in underground piping systems or the escape of liquid will go unnoticed, which could lead to appropriate measures not being taken, which could lead to the spread of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons.

I2. To limit the probability that leakage detection equipment will not meet appropriate standards, which could lead to the failure of the equipment, which could lead to the escape of liquid going unnoticed, which could lead to a fire or explosion, which could lead to harm to persons.
A1. Piping and transfer systems for flammable liquids and combustible liquids, in buildings, structures and open areas.

A2. This also applies to vent piping material for aboveground and underground storage tanks containing flammable liquids or combustible liquids, as stated in Sentences 4.3.5.1.(1) and 4.3.10.2. (1).

Exception: except as stated in:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.5,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to
- tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

It is to be noted that Section 4.45 applies to:

I1. To state the application of Section 4.5.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

CodeReference (including record number) 4.5.1.1.(2)-01
Attribution - functional statement/objective Not applicable

CodeText

2) Except where otherwise stated in this Part, this Section shall not apply to the following:
   a) tubing or casings and piping for oil or gas wells,
   b) transmission pipelines,
   c) piping for vehicles, aircraft, watercraft and portable or stationary engines,
   d) piping systems in fuel-dispensing stations and distilleries, and
   e) piping that falls within the scope of boiler and pressure vessel regulations made pursuant to the Safety Codes Act.

Exception:

- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

A1. Piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas, consisting of

- tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of boiler and pressure vessel regulations made pursuant to the Safety Codes Act.

Intention

11. To exclude certain piping and transfer operations from the application of Section 4.5.

This is to limit the probability of overlap or inconsistency with other Sections of the Alberta Fire Code 2006, or with matters under provincial jurisdiction.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Suitability of materials with respect to maximum anticipated working pressures and operating temperatures, for piping systems containing flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. This also applies to:
- vent piping material for aboveground and underground storage tanks containing flammable liquids or combustible liquids, as stated in Sentences 4.3.5.1.(1) and 4.3.10.2.(1),
- materials used for piping, valves and fittings for flammable liquid and combustible liquid installations on piers and wharves [not including marine fuel-dispensing stations], as stated in Sentence 4.8.4.1.(1), and
- piping for flammable liquids or combustible liquids at fuel-dispensing stations, as stated in Sentences 4.6.2.3.(1) and 4.6.6.5.(6).

Exception:
except as stated in:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to:
- tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I. To limit the probability that liquid pressure or temperature will lead to failure of the piping, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeText

1) Materials for piping systems containing flammable liquids or combustible liquids shall be suitable for the maximum anticipated working pressures and operating temperatures and for the chemical properties of the contained liquid.

Application

A1. Suitability of materials with respect to maximum anticipated working pressures and operating temperatures, for piping systems containing flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. This also applies to
- vent piping material for aboveground and underground storage tanks containing flammable liquids or combustible liquids, as stated in Sentences 4.3.5.1.(1) and 4.3.10.2.(1),
- materials used for piping, valves and fittings for flammable liquid and combustible liquid installations on piers and wharves [not including marine fuel-dispensing stations], as stated in Sentence 4.8.4.1.(1), and
- piping for flammable liquids or combustible liquids at fuel-dispensing stations, as stated in Sentences 4.6.2.3.(1) and 4.6.6.5.(6).

Exception:

- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act.
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that liquid pressure or temperature will lead to failure of the piping, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Application

A1. Suitability of materials with respect to maximum anticipated working pressures and operating temperatures, for piping systems containing flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. This also applies to:
- vent piping material for aboveground and underground storage tanks containing flammable liquids or combustible liquids, as stated in Sentences 4.3.5.1.(1) and 4.3.10.2.(1),
- materials used for piping, valves and fittings for flammable liquid and combustible liquid installations on piers and wharves (not including marine fuel-dispensing stations), as stated in Sentence 4.8.4.1.(1), and
- piping for flammable liquids or combustible liquids at fuel-dispensing stations, as stated in Sentences 4.6.2.3.(1) and 4.6.6.5.(6).

Exception:
- except as stated in:
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
    - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Sentence 4.5.1.1.(2), which applies to
    - tubing or casings and piping for oil or gas wells,
    - transmission pipelines,
    - piping for vehicles, aircraft, watercraft and portable or stationary engines,
    - piping systems in fuel-dispensing stations and distilleries, and
    - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that liquid pressure or temperature will lead to failure of the piping, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Suitability of materials with respect to the chemical properties of the contained liquid, for piping systems containing flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. This also applies to:
- vent piping material for aboveground and underground storage tanks containing flammable liquids or combustible liquids, as stated in Sentences 4.3.5.1.(1) and 4.3.10.2.(1),
- materials used for piping, valves and fittings for flammable liquid and combustible liquid installations on piers and wharves [not including marine fuel-dispensing stations], as stated in Sentence 4.8.4.1.(1), and
- piping for flammable liquids or combustible liquids at fuel-dispensing stations, as stated in Sentences 4.6.2.3.(1) and 4.6.6.5.(6).

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to:
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to:
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that a chemical reaction with the liquid it contains will lead to premature corrosion or failure of the piping, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions
Alberta Fire Code 2006

A1. Suitability of materials with respect to the chemical properties of the contained liquid, for piping systems containing flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. This also applies to:
- vent piping material for aboveground and underground storage tanks containing flammable liquids or combustible liquids, as stated in Sentences 4.3.5.1.(1) and 4.3.10.2.(1),
- materials used for piping, valves and fittings for flammable liquid and combustible liquid installations on piers and wharves [not including marine fuel-dispensing stations], as stated in Sentence 4.8.4.1.(1), and
- piping for flammable liquids or combustible liquids at fuel-dispensing stations, as stated in Sentences 4.6.2.3.(1) and 4.6.6.5.(6).

Exception:
except as stated in:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to:
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Sentence 4.5.1.1.(2), which applies to:
    - tubing or casings and piping for oil or gas wells,
    - transmission pipelines,
    - piping for vehicles, aircraft, watercraft and portable or stationary engines,
    - piping systems in fuel-dispensing stations and distilleries, and
    - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

I1. To limit the probability that a chemical reaction with the liquid it contains will lead to premature corrosion or failure of the piping, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
A1. Suitability of materials with respect to the chemical properties of the contained liquid, for piping systems containing flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. This also applies to:
- vent piping material for aboveground and underground storage tanks containing flammable liquids or combustible liquids, as stated in Sentences 4.3.5.1.(1) and 4.3.10.2.(1),
- materials used for piping, valves and fittings for flammable liquid and combustible liquid installations on piers and wharves [not including marine fuel-dispensing stations], as stated in Sentence 4.8.4.1.(1), and
- piping for flammable liquids or combustible liquids at fuel-dispensing stations, as stated in Sentences 4.6.2.3.(1) and 4.6.6.5.(6).

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent
I1. To limit the probability that a chemical reaction with the liquid it contains will lead to premature corrosion or failure of the piping, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

A1. Materials that are subject to failure from internal stress or rupture by mechanical damage, considered for flammable liquid or combustible liquid piping systems in buildings, structures and open areas.

A2. This also applies to:
- vent piping material for aboveground and underground storage tanks containing flammable liquids or combustible liquids, as stated in Sentences 4.3.5.1.(1) and 4.3.10.2.(1),
- materials used for piping, valves and fittings for flammable liquid and combustible liquid installations on piers and wharves (not including marine fuel-dispensing stations), as stated in Sentence 4.8.4.1.(1), and
- piping for flammable liquids or combustible liquids at fuel-dispensing stations, as stated in Sentences 4.6.2.3.(1) and 4.6.6.5.(6).

Exception:
- except as stated in:
  - Sentence 4.5.2.1.(3), which applies to non-metallic piping systems used for underground installations and meeting a specified standard,
  - Sentence 4.5.2.2.(1), which applies to special situations and materials;
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to:
    - Sentence 4.1.1.1.(3), which applies to:
      - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
      - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
      - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
      - the storage of aerosol products covered under Subsection 3.2.5.,
      - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
      - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
      - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
      - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
  - Sentence 4.5.1.1.(2), which applies to:
    - tubing or casings and piping for oil or gas wells,
    - transmission pipelines,
    - piping for vehicles, aircraft, watercraft and portable or stationary engines,
    - piping systems in fuel-dispensing stations and distilleries, and
    - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

I1. To limit the probability that internal stress or mechanical damage will lead to failure of the piping, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Materials that are subject to failure from internal stress or rupture by mechanical damage, considered for flammable liquid or combustible liquid piping systems in buildings, structures and open areas.

A2. This also applies to:
- vent piping material for aboveground and underground storage tanks containing flammable liquids or combustible liquids, as stated in Sentences 4.3.5.1.(1) and 4.3.10.2.(1),
- materials used for piping, valves and fittings for flammable liquid and combustible liquid installations on piers and wharves (not including marine fuel-dispensing stations), as stated in Sentence 4.8.4.1.(1), and
- piping for flammable liquids or combustible liquids at fuel-dispensing stations, as stated in Sentences 4.6.2.3.(1) and 4.6.6.5.(6).

Exception:
- except as stated in Sentence 4.5.2.1.(3), which applies to non-metallic piping systems used for underground installations and meeting a specified standard,
- Sentence 4.5.2.2.(1), which applies to special situations and materials;
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to:
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to:
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that internal stress or mechanical damage will lead to failure of the piping, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeText

2) Except as provided in Sentence (3), the use of the following materials for piping systems referred to in Sentence (1) shall not be permitted:

a) materials that are subject to failure from internal stress or rupture by mechanical damage, or
b) combustible or low-melting-point materials that are subject to failure even in moderate fires.

Application

A1. Materials that are subject to failure from internal stress or rupture by mechanical damage, considered for flammable liquid or combustible liquid piping systems in buildings, structures and open areas.

A2. This also applies to:
- vent piping material for aboveground and underground storage tanks containing flammable liquids or combustible liquids, as stated in Sentences 4.3.5.1.(1) and 4.3.10.2.(1),
- materials used for piping, valves and fittings for flammable liquid and combustible liquid installations on piers and wharves (not including marine fuel-dispensing stations), as stated in Sentence 4.8.4.1.(1), and
- piping for flammable liquids or combustible liquids at fuel-dispensing stations, as stated in Sentences 4.6.2.3.(1) and 4.6.6.5.(6).

Exception:
except as stated in:
- Sentence 4.5.2.1.(3), which applies to non-metallic piping systems used for underground installations and meeting a specified standard,
- Sentence 4.5.2.2.(1), which applies to special situations and materials;
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to:
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to:
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that the piping system being exposed to fire will lead to the system burning or melting, which could lead to failure of the system, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

I1. To limit the probability that the piping system being exposed to fire will lead to the system burning or melting, which could lead to failure of the system, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

Application

A1. Non-metallic piping systems containing flammable liquid or combustible liquid used for underground installations and conforming to ULC/ORD-C971, “Nonmetallic Underground Piping for Flammable and Combustible Liquids.”

A2. This also applies to:
- vent piping material for underground storage tanks containing flammable liquids or combustible liquids, as stated in Sentences 4.3.5.1.(1) and 4.3.10.2.(1),
- materials used for piping, valves and fittings for flammable liquid and combustible liquid installations on piers and wharves (not including marine fuel-dispensing stations), as stated in Sentence 4.8.4.1.(1), and
- piping for flammable liquids or combustible liquids at fuel-dispensing stations, as stated in Sentences 4.6.2.3.(1) and 4.6.6.5.(6).

Exception:
- except as stated in
  - Sentence 4.5.2.2.(1), which applies to special situations and materials;
  - Sentence 4.5.2.1.(5), which applies to piping and fittings used where service pressures may exceed 875 kPa (gauge);
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
    - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Sentence 4.5.1.1.(2), which applies to
    - tubing or casings and piping for oil or gas wells,
    - transmission pipelines,
    - piping for vehicles, aircraft, watercraft and portable or stationary engines,
    - piping systems in fuel-dispensing stations and distilleries, and
    - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To exempt certain materials from the application of Sentence 4.5.2.1.(2) if certain conditions and standards are met.

This is to limit the probability that internal stress, exposure to fire or mechanical damage will lead to failure of the piping, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Non-metallic piping systems containing flammable liquid or combustible liquid used for underground installations and conforming to ULC/ORD-C971, “Nonmetallic Underground Piping for Flammable and Combustible Liquids.”

A2. This also applies to:
- vent piping material for underground storage tanks containing flammable liquids or combustible liquids, as stated in Sentences 4.3.5.1.(1) and 4.3.10.2.(1),
- materials used for piping, valves and fittings for flammable liquid and combustible liquid installations on piers and wharves (not including marine fuel-dispensing stations), as stated in Sentence 4.8.4.1.(1), and
- piping for flammable liquids or combustible liquids at fuel-dispensing stations, as stated in Sentences 4.6.2.3.(1) and 4.6.6.5.(6).

Exception:
except as stated in:
- Sentence 4.5.2.2.(1), which applies to special situations and materials;
- Sentence 4.5.2.1.(5), which applies to piping and fittings used where service pressures may exceed 875 kPa (gauge);
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to:
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to:
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To exempt certain materials from the application of Sentence 4.5.2.1.(2) if certain conditions and standards are met.

This is to limit the probability that internal stress, exposure to fire or mechanical damage will lead to failure of the piping, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Non-metallic piping systems containing flammable liquid or combustible liquid used for underground installations and conforming to ULC/ORD-C971, “Nonmetallic Underground Piping for Flammable and Combustible Liquids.”

A2. This also applies to
- vent piping material for underground storage tanks containing flammable liquids or combustible liquids, as stated in Sentences 4.3.5.1.(1) and 4.3.10.2.(1),
- materials used for piping, valves and fittings for flammable liquid and combustible liquid installations on piers and wharves [not including marine fuel-dispensing stations], as stated in Sentence 4.8.4.1.(1), and
- piping for flammable liquids or combustible liquids at fuel-dispensing stations, as stated in Sentences 4.6.2.3.(1) and 4.6.6.5.(6).

Exception:
except as stated in
- Sentence 4.5.2.2.(1), which applies to special situations and materials;
- Sentence 4.5.2.1.5, which applies to piping and fittings used where service pressures may exceed 875 kPa (gauge);
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production and storage or handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

II. To exempt certain materials from the application of Sentence 4.5.2.1.(2) if certain conditions and standards are met.

This is to limit the probability that internal stress, exposure to fire or mechanical damage will lead to failure of the piping, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Application
A1. Steel piping systems containing flammable liquid or combustible liquid, in buildings, structures and open areas.

A2. This also applies to:
- vent piping material for aboveground and underground storage tanks containing flammable liquids or combustible liquids, as stated in Sentences 4.3.5.1.(1) and 4.3.10.2.(1),
- materials used for piping, valves and fittings for flammable liquid and combustible liquid installations on piers and wharves (not including marine fuel-dispensing stations), as stated in Sentence 4.8.4.1.(1), and
- piping for flammable liquids or combustible liquids at fuel-dispensing stations, as stated in Sentences 4.6.2.3.(1) and 4.6.6.5.(6).

Exception:
except as stated in:
- Sentence 4.5.2.2.(1), which applies to special situations and materials;
- Sentence 4.5.2.1.(5), which applies to piping and fittings used where service pressures may exceed 875 kPa (gauge);
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to:
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Sentence 4.5.1.1.(2), which applies to:
    - tubing or casings and piping for oil or gas wells,
    - transmission pipelines,
    - piping for vehicles, aircraft, watercraft and portable or stationary engines,
    - piping systems in fuel-dispensing stations and distilleries, and
    - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent
I1. To limit the probability that:
- internal stress or mechanical damage will lead to failure of the piping, or
- a chemical reaction with the liquid will lead to premature corrosion of the piping, which could lead to failure of the piping.

This is to limit the probability of the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Application

A1. Steel piping systems containing flammable liquid or combustible liquid, in buildings, structures and open areas.

A2. This also applies to:
- vent piping material for aboveground and underground storage tanks containing flammable liquids or combustible liquids, as stated in Sentences 4.3.5.1.(1) and 4.3.10.2.(1),
- materials used for piping, valves and fittings for flammable liquid and combustible liquid installations on piers and wharves [not including marine fuel-dispensing stations], as stated in Sentence 4.8.4.1.(1), and
- piping for flammable liquids or combustible liquids at fuel-dispensing stations, as stated in Sentences 4.6.2.3.(1) and 4.6.6.5.(6).

Exception:
- except as stated in:
  - Sentence 4.5.2.2.(1), which applies to special situations and materials;
  - Sentence 4.5.2.1.(5), which applies to piping and fittings used where service pressures may exceed 875 kPa (gauge);
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to:
    - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
    - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Sentence 4.5.1.1.(2), which applies to:
    - tubing or casings and piping for oil or gas wells,
    - transmission pipelines,
    - piping for vehicles, aircraft, watercraft and portable or stationary engines,
    - piping systems in fuel-dispensing stations and distilleries, and
    - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

11. To limit the probability that:
- internal stress or mechanical damage will lead to failure of the piping, or
- a chemical reaction with the liquid will lead to premature corrosion of the piping, which could lead to failure of the piping.

This is to limit the probability of the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
A1. Steel piping systems containing flammable liquid or combustible liquid, in buildings, structures and open areas.

A2. This also applies to:
- vent piping material for aboveground and underground storage tanks containing flammable liquids or combustible liquids, as stated in Sentences 4.3.5.1.(1) and 4.3.10.2.(1),
- materials used for piping, valves and fittings for flammable liquid and combustible liquid installations on piers and wharves (not including marine fuel-dispensing stations), as stated in Sentence 4.8.4.1.(1), and
- piping for flammable liquids or combustible liquids at fuel-dispensing stations, as stated in Sentences 4.6.2.(3)(1) and 4.6.6.5.(6).

Exception:
- except as stated in Sentence 4.5.2.2.(1), which applies to special situations and materials;
- Sentence 4.5.2.1.(5), which applies to piping and fittings used where service pressures may exceed 875 kPa (gauge);
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations";
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

I1. To limit the probability that:
- internal stress or mechanical damage will lead to failure of the piping, or
- a chemical reaction with the liquid will lead to premature corrosion of the piping, which could lead to failure of the piping.

This is to limit the probability of the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Steel piping systems containing flammable liquid or combustible liquid where service pressures may exceed 875 kPa (gauge) and conforming to ANSI/ASME B31.3, in buildings, structures and open areas.

A2. This also applies to
- vent piping material for aboveground and underground storage tanks containing flammable liquids or combustible liquids, as stated in Sentences 4.3.5.1.(1) and 4.3.10.2.(1),
- materials used for piping, valves and fittings for flammable liquid and combustible liquid installations on piers and wharves [not including marine fuel-dispensing stations], as stated in Sentence 4.6.4.1.(1), and
- piping for flammable liquids or combustible liquids at fuel-dispensing stations, as stated in Sentences 4.6.2.3.(1) and 4.6.6.5.(6).

Exception:
- except as stated in
  - Sentence 4.5.2.2.(1), which applies to special situations and materials;
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations";
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
    - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Sentence 4.5.1.1.(2), which applies to
    - tubing or casings and piping for oil or gas wells,
    - transmission pipelines,
    - piping for vehicles, aircraft, watercraft and portable or stationary engines,
    - piping systems in fuel-dispensing stations and distilleries, and
    - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To exempt steel piping systems involving high service pressures from the application of Sentences 4.5.2.1.(3) and 4.5.2.1.(4) if certain standards are met.

This is to limit the probability that
- internal stress or mechanical damage will lead to failure of the piping, or
- a chemical reaction with the liquid will lead to premature corrosion of the piping, which could lead to failure of the piping.

This is to limit the probability of the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

CodeText

5) Where service pressures exceeding 875 kPa (gauge) may occur, piping and fittings shall be designed in conformance with ANSI/ASME B31.3, "Process Piping."

Application

A1. Steel piping systems containing flammable liquid or combustible liquid where service pressures may exceed 875 kPa (gauge) and conforming to ANSI/ASME B31.3, in buildings, structures and open areas.

A2. This also applies to:
- vent piping material for aboveground and underground storage tanks containing flammable liquids or combustible liquids, as stated in Sentences 4.3.5.1.1(1) and 4.3.10.2.1(1),
- materials used for piping, valves and fittings for flammable liquid and combustible liquid installations on piers and wharves [not including marine fuel-dispensing stations], as stated in Sentence 4.8.4.1.1(1), and
- piping for flammable liquids or combustible liquids at fuel-dispensing stations, as stated in Sentences 4.6.2.3.(1) and 4.6.6.5.(6).

Exception:
- except as stated in:
  - Sentence 4.5.2.2.1(1), which applies to special situations and materials;
  - Sentence 4.1.1.1.1(2), which applies to unique hazards in process plants;
  - Sentence 4.1.1.1.1(3), which applies to:
    - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations";
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
    - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Sentence 4.5.1.1.2(2), which applies to:
    - tubing or casings and piping for oil or gas wells,
    - transmission pipelines,
    - piping for vehicles, aircraft, watercraft and portable or stationary engines,
    - piping systems in fuel-dispensing stations and distilleries, and
    - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To exempt steel piping systems involving high service pressures from the application of Sentences 4.5.2.1.3(3) and 4.5.2.1.4(4) if certain standards are met.

This is to limit the probability that:
- internal stress or mechanical damage will lead to failure of the piping, or
- a chemical reaction with the liquid will lead to premature corrosion of the piping, which could lead to failure of the piping.

This is to limit the probability of the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Steel piping systems containing flammable liquid or combustible liquid where service pressures may exceed 875 kPa (gauge) and conforming to ANSI/ASME B31.3, “Process Piping,” in buildings, structures and open areas.

A2. This also applies to
- vent piping material for aboveground and underground storage tanks containing flammable liquids or combustible liquids, as stated in Sentences 4.3.5.1.(1) and 4.3.10.2.(1),
- materials used for piping, valves and fittings for flammable liquid and combustible liquid installations on piers and wharves [not including marine fuel-dispensing stations], as stated in Sentence 4.8.4.1.(1), and
- piping for flammable liquids or combustible liquids at fuel-dispensing stations, as stated in Sentences 4.6.2.3.(1) and 4.6.6.5.(6).

Exception:
- except as stated in
  - Sentence 4.5.2.2.(1), which applies to special situations and materials;
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
    - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Sentence 4.5.1.1.(2), which applies to
    - tubing or casings and piping for oil or gas wells,
    - transmission pipelines,
    - piping for vehicles, aircraft, watercraft and portable or stationary engines,
    - piping systems in fuel-dispensing stations and distilleries, and
    - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

This is to limit the probability that
- internal stress or mechanical damage will lead to failure of the piping, or
- a chemical reaction with the liquid will lead to premature corrosion of the piping, which could lead to failure of the piping.

This is to limit the probability of the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
6) Underground piping systems shall include piping in tank sumps, transition sumps and dispenser sumps.

Exception: except as stated in
- Sentence 4.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

I. To clarify that the term "underground piping systems" includes piping in tank sumps, transition sumps and dispenser sumps.

1) Where problems of corrosion, contamination, or sanitation or standards of purity require special materials, it is permitted to use non-metallic materials for piping, valves and fittings in conformance with Clause 1.2.1.1.(1)(b) of Division A.

Application

A1. Non-metallic piping systems containing flammable liquid or combustible liquid where problems of corrosion, contamination, or sanitation or standards of purity require special materials, in buildings, structures and open areas.

A2. This also applies to:
- vent piping for aboveground and underground storage tanks containing flammable liquids or combustible liquids, as stated in Sentences 4.3.5.1.(1) and 4.3.10.2.(1),
- materials used for piping, valves and fittings for flammable liquid and combustible liquid installations on piers and wharves (not including marine fuel-dispensing stations), as stated in Sentence 4.8.4.1.(1), and
- piping for flammable liquids or combustible liquids at fuel-dispensing stations, as stated in Sentences 4.6.2.3.(1) and 4.6.6.5.(6).

Exception:
except as stated in:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to:
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to:
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To exempt non-metallic materials from the application of Sentence 4.5.2.1.(2) if:
- such materials are required for reasons of corrosion, contamination, or sanitation or standards of purity,
- certain standards are met.

This is to limit the probability that:
- internal stress or mechanical damage will lead to failure of the piping, or
- a chemical reaction with the liquid will lead to premature corrosion of the piping, which could lead to failure of the piping.

This is to limit the probability of the escape of liquid, which could lead to harm to the public.

  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to:
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To exempt non-metallic materials from the application of Sentence 4.5.2.1.(2) if:
- such materials are required for reasons of corrosion, contamination, or sanitation or standards of purity, and
- certain standards are met.

This is to limit the probability that:
- internal stress or mechanical damage will lead to failure of the piping, or
- a chemical reaction with the liquid will lead to premature corrosion of the piping, which could lead to failure of the piping.

This is to limit the probability of the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Non-metallic piping systems containing flammable liquid or combustible liquid where problems of corrosion, contamination, or sanitation or standards of purity require special materials, in buildings, structures and open areas.

A2. This also applies to:
- vent piping for aboveground and underground storage tanks containing flammable liquids or combustible liquids, as stated in Sentences 4.3.5.1.(1) and 4.3.10.2.(1),
- materials used for piping, valves and fittings for flammable liquid and combustible liquid installations on piers and wharves (not including marine fuel-dispensing stations), as stated in Sentence 4.8.4.1.(1), and
- piping for flammable liquids or combustible liquids at fuel-dispensing stations, as stated in Sentences 4.6.2.3.(1) and 4.6.6.5.(6).

Exception:
except as stated in:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to:
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to:
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To exempt non-metallic materials from the application of Sentence 4.5.2.1.(2) if:
- the materials are required for reasons of corrosion, contamination, or sanitation or standards of purity, and
- certain standards are met.

This is to limit the probability that:
- internal stress or mechanical damage will lead to failure of the piping, or
- a chemical reaction with the liquid will lead to premature corrosion of the piping, which could lead to failure of the piping.

This is to limit the probability of the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Corrosion protection of exposed and underground piping, valves, couplings, flanges and bolts that are fabricated of any ferrous substance, in piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. This also applies to
- piping for flammable liquids or combustible liquids at fuel-dispensing stations, as stated in Sentence 4.6.2.4.(1), and
- vent piping for aboveground and underground storage tanks containing flammable liquids or combustible liquids, as stated in Sentences 4.3.5.1.(1) and 4.3.10.2.(1).

Exception:
- except as stated in Sentence 4.5.3.1.(2), which applies to underground steel piping, valves and fittings,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to:
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to:
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that premature corrosion will lead to failure of the piping, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

A1. Corrosion protection of exposed and underground piping, valves, couplings, flanges and bolts that are fabricated of any ferrous substance, in piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. This also applies to:
- piping for flammable liquids or combustible liquids at fuel-dispensing stations, as stated in Sentence 4.6.2.4.(1), and
- vent piping for aboveground and underground storage tanks containing flammable liquids or combustible liquids, as stated in Sentences 4.3.5.1.(1) and 4.3.10.2.(1).

Exception:
except as stated in:
- Sentence 4.5.3.1.(2), which applies to underground steel piping, valves and fittings,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to:
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

A1. Corrosion protection of exposed and underground piping, valves, couplings, flanges and bolts that are fabricated of any ferrous substance, in piping and transfer systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. This also applies to:
- piping for flammable liquids or combustible liquids at fuel-dispensing stations, as stated in Sentence 4.6.2.4.(1), and
- vent piping for aboveground and underground storage tanks containing flammable liquids or combustible liquids, as stated in Sentences 4.3.5.1.(1) and 4.3.10.2.(1).

Exception:
except as stated in:
- Sentence 4.5.3.1.(2), which applies to underground steel piping, valves and fittings,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to:
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

I1. To limit the probability that premature corrosion will lead to failure of the piping, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Corrosion protection of exposed and underground piping, valves, couplings, flanges and bolts that are fabricated of any ferrous substance shall be thoroughly coated with a rust-resistant compatible material.

A2. This also applies to
- piping for flammable liquids or combustible liquids at fuel-dispensing stations, as stated in Sentence 4.6.2.4.(1), and
- vent piping for aboveground and underground storage tanks containing flammable liquids or combustible liquids, as stated in Sentences 4.3.5.1.(1) and 4.3.10.2.(1).

Exception:
- except as stated in
  - Sentence 4.5.3.1.(2), which applies to underground steel piping, valves and fittings,
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
    - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Sentence 4.5.1.1.(2), which applies to
    - tubing or casings and piping for oil or gas wells,
    - transmission pipelines,
    - piping for vehicles, aircraft, watercraft and portable or stationary engines,
    - piping systems in fuel-dispensing stations and distilleries, and
    - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that premature corrosion will lead to failure of the piping, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.5.3.1.(2)-01
Attribution - functional statement/objective F80-OH5

CodeText

2) Underground steel piping, valves and fittings that are in contact with the soil or groundwater shall be protected against corrosion in conformance with

a) CAN/ULC-S603.1, “External Corrosion Protection Systems for Steel Underground Tanks for Flammable and Combustible Liquids,” or

b) good engineering practice, such as described in PACE Report No. 87-1, “Impressed Current Method of Cathodic Protection of Underground Petroleum Storage Tanks,” published by the Canadian Petroleum Products Institute.

Application

A1. Corrosion protection of underground steel piping, valves and fittings in contact with soil or groundwater, in piping and transfer systems for flammable liquids or combustible liquids.

A2. This also applies to

- piping for flammable liquids or combustible liquids at fuel-dispensing stations, as stated in Sentence 4.6.2.4.(1), and

- vent piping located underground for underground storage tanks containing flammable liquids or combustible liquids, as stated in Sentences 4.3.5.1.(1) and 4.3.10.2.(1).

Exception:

except as stated in

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,

- Sentence 4.1.1.1.(3), which applies to

- the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,

- appliances and their ancillary equipment within the scope of CAN/CSA-B139.

- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,

- the storage of aerosol products covered under Subsection 3.2.5.,

- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,

- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,

- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and

- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,

- Sentence 4.5.1.1.(2), which applies to

- tubing or casings and piping for oil or gas wells,

- transmission pipelines,

- piping for vehicles, aircraft, watercraft and portable or stationary engines,

- piping systems in fuel-dispensing stations and distilleries, and

- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To exempt underground steel piping systems from the application of Sentence 4.5.3.1.(1) if certain standards are met.

This is to limit the probability that premature corrosion will lead to failure of the piping, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

CodeText

2) Underground steel piping, valves and fittings that are in contact with the soil or groundwater shall be protected against corrosion in conformance with

a) CAN/ULC-S603.1, “External Corrosion Protection Systems for Steel Underground Tanks for Flammable and Combustible Liquids,” or

b) good engineering practice, such as described in PACE Report No. 87-1, “Impressed Current Method of Cathodic Protection of Underground Petroleum Storage Tanks,” published by the Canadian Petroleum Products Institute.

Application

A1. Corrosion protection of underground steel piping, valves and fittings in contact with soil or groundwater, in piping and transfer systems for flammable liquids or combustible liquids.

A2. This also applies to

- piping for flammable liquids or combustible liquids at fuel-dispensing stations, as stated in Sentence 4.6.2.4.(1), and

- vent piping located underground for underground storage tanks containing flammable liquids or combustible liquids, as stated in Sentences 4.3.5.1.(1) and 4.3.10.2.(1).

Exception:

- except as stated in

  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,

  - Sentence 4.1.1.1.(3), which applies to

  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,

  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,

  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,

  - the storage of aerosol products covered under Subsection 3.2.5.,

  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,

  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,

  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and

  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,

  - Sentence 4.5.1.1.(2), which applies to

  - tubing or casings and piping for oil or gas wells,

  - transmission pipelines,

  - piping for vehicles, aircraft, watercraft and portable or stationary engines,

  - piping systems in fuel-dispensing stations and distilleries, and

  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To exempt underground steel piping systems from the application of Sentence 4.5.3.1.(1) if certain standards are met.

This is to limit the probability that premature corrosion will lead to failure of the piping, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
