Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.5.3.1.(2)-03
Attribution - functional statement/objective F80-OS1.1

CodeText

2) Underground steel piping, valves and fittings that are in contact with the soil or groundwater shall be protected against corrosion in conformance with
a) CAN/ULC-S603.1, “External Corrosion Protection Systems for Steel Underground Tanks for Flammable and Combustible Liquids,” or
b) good engineering practice, such as described in PACE Report No. 87-1, “Impressed Current Method of Cathodic Protection of Underground Petroleum Storage Tanks,” published by the Canadian Petroleum Products Institute.

Application

A1. Corrosion protection of underground steel piping, valves and fittings in contact with soil or groundwater, in piping and transfer systems for flammable liquids or combustible liquids.

A2. This also applies to
- piping for flammable liquids or combustible liquids at fuel-dispensing stations, as stated in Sentence 4.6.2.4.(1), and
- vent piping located underground for underground storage tanks containing flammable liquids or combustible liquids, as stated in Sentences 4.3.5.1.(1) and 4.3.10.2.(1).

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
- the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to
- tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To exempt underground steel piping systems from the application of Sentence 4.5.3.1.(1) if certain standards are met.

This is to limit the probability that premature corrosion will lead to failure of the piping, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Identification of piping for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability of mixing incompatible products or mixing Class I liquids with Class II or III liquids during normal operations, which could lead to a fire or explosion, which could lead to harm to persons.

I2. To limit the probability of delays or inefficiencies in responding to a fire emergency, which could lead to the spread of fire beyond the point of origin, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Colour of piping, for the purpose of identification, for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Application

F81-OH5

Attribution - functional statement/objective

2) Piping for flammable liquids or combustible liquids shall not be painted red.

Application

I1. To limit the probability that piping for flammable liquids and combustible liquids will be mistaken as piping for another use [e.g. sprinkler or standpipe piping which is typically painted red], which could lead to misuse of the piping during servicing or maintenance, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Colour of piping, for the purpose of identification, for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception: except as stated in

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and

2) Piping for flammable liquids or combustible liquids shall not be painted red.

Application

F81-OS1.1

Attribution - functional statement/objective 4.5.4.1.(2)-02

CodeReference (including record number) F81-OS1.1

To limit the probability that piping for flammable liquids and combustible liquids will be mistaken as piping for another use [e.g. sprinkler or standpipe piping which is typically painted red], which could lead to misuse of the piping during servicing or maintenance, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
A1. Identification of transfer points in piping systems for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”;
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Application
3) Transfer points in piping systems for flammable liquids and combustible liquids shall be identified in conformance with CPPI, “Using the CPPI Colour-Symbol System to Mark Equipment and Vehicles for Product Identification.”

Application
A1. Identification of transfer points in piping systems for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”;
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent
1. To limit the probability of delays or inefficiencies in responding to a fire emergency, which could lead to the spread of fire beyond the point of origin, which could lead to damage to the building or facility.

  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent
I1. To limit the probability of mixing incompatible products or mixing Class I liquids with Class II or III liquids during normal operations, which could lead to a fire or explosion, which could lead to harm to persons.
I2. To limit the probability of delays or inefficiencies in responding to a fire emergency, which could lead to the spread of fire beyond the point of origin, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

A1. Availability to fire department of documentation on piping systems for flammable liquids or combustible liquids, including tank and pumping arrangements, shall be made available to the fire department upon request.

Exception:

- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,

  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability of delays or inefficiencies in responding to a fire emergency, which could lead to the spread of fire beyond the point of origin, which could lead to harm to persons, including emergency responders.
F12-OH5

2) Documents referred to in Sentence (1) shall be kept at 2 separate locations so that one copy remains readily available in the event the other is inaccessible due to fire.

Application

A1. Location of documentation on piping systems for flammable liquids or combustible liquids, including tank and pumping arrangements, in buildings, structures and open areas.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability of delays or inefficiencies in responding to a spill of flammable liquids or combustible liquids if one set of plans is not accessible, which could lead to the spread of liquid beyond the point of origin, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Location of documentation on piping systems for flammable liquids or combustible liquids, including tank and pumping arrangements, in buildings, structures and open areas.

I1. To limit the probability of delays or inefficiencies in responding to a fire emergency if one set of plans is not accessible due to the fire, which could lead to the spread of fire beyond the point of origin, which could lead to harm to persons, including emergency responders.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number)  4.5.5.1.(1)-01
Attribution - functional statement/objective  F43-OH5

Application

A1. Joint compound or polytetrafluoroethylene tape for threaded joints in piping systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. This also applies to:
- vent piping material for aboveground and underground storage tanks containing flammable liquids or combustible liquids, as stated in Sentences 4.3.5.1.(1) and 4.3.10.2.(1),
- materials used for piping, valves and fittings for flammable liquid and combustible liquid installations on piers and wharves [not including marine fuel-dispensing stations], as stated in Sentence 4.8.4.1.(1), and
- piping for flammable liquids or combustible liquids at fuel-dispensing stations, as stated in Sentence 4.6.6.5.(6).

Exception:
except as stated in:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to:
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to:
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that threaded joints will leak, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Joint compound or polytetrafluoroethylene tape for threaded joints in piping systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. This also applies to:
- vent piping material for aboveground and underground storage tanks containing flammable liquids or combustible liquids, as stated in Sentences 4.3.5.1.(1) and 4.3.10.2.(1),
- materials used for piping, valves and fittings for flammable liquid and combustible liquid installations on piers and wharves [not including marine fuel-dispensing stations], as stated in Sentence 4.8.4.1.(1), and
- piping for flammable liquids or combustible liquids at fuel-dispensing stations, as stated in Sentence 4.6.6.5.(6).

Exception:
- except as stated in:
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to:
    - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
    - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Sentence 4.5.1.1.(2), which applies to:
    - tubing or casings and piping for oil or gas wells,
    - transmission pipelines,
    - piping for vehicles, aircraft, watercraft and portable or stationary engines,
    - piping systems in fuel-dispensing stations and distilleries, and
    - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

CodeText

1) Threaded joints in piping systems for flammable liquids or combustible liquids shall be made using joint compound or polytetrafluoroethylene tape conforming to CAN/ULC-S642-M, “Compounds and Tapes for Threaded Pipe Joints.”

Application

A1. Joint compound or polytetrafluoroethylene tape for threaded joints in piping systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

I1. To limit the probability that threaded joints will leak, which could lead to the escape of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Joint compound or polytetrafluoroethylene tape for threaded joints in piping systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. This also applies to:
- vent piping material for aboveground and underground storage tanks containing flammable liquids or combustible liquids, as stated in Sentences 4.3.5.1.(1) and 4.3.10.2.(1),
- materials used for piping, valves and fittings for flammable liquid and combustible liquid installations on piers and wharves [not including marine fuel-dispensing stations], as stated in Sentence 4.8.4.1.(1), and
- piping for flammable liquids or combustible liquids at fuel-dispensing stations, as stated in Sentence 4.6.6.5.(6).

Exception:
except as stated in:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to:
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to:
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent
I1. To limit the probability that threaded joints will leak, which could lead to the escape of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Intent

I1. To limit the probability that welds in piping will fail, which could lead to the escape of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Welding of piping systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. This also applies to:
- vent piping material for aboveground and underground storage tanks containing flammable liquids or combustible liquids, as stated in Sentences 4.3.5.1.(1) and 4.3.10.2.(1),
- materials used for piping, valves and fittings for flammable liquid and combustible liquid installations on piers and wharves (not including marine fuel-dispensing stations), as stated in Sentence 4.8.4.1.(1), and
- piping for flammable liquids or combustible liquids at fuel-dispensing stations, as stated in Sentence 4.6.8.5.(6).

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

I1. To direct Alberta Fire Code 2006 users to Section 5.2.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Location of flanged joints in welded piping systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. This also applies to:
- vent piping material for aboveground and underground storage tanks containing flammable liquids or combustible liquids, as stated in Sentences 4.3.5.1.(1) and 4.3.10.2.(1),
- materials used for piping, valves and fittings for flammable liquid and combustible liquid installations on piers and wharves [not including marine fuel-dispensing stations], as stated in Sentence 4.8.4.1.(1), and
- piping for flammable liquids or combustible liquids at fuel-dispensing stations, as stated in Sentence 4.6.6.5.(6).

Exception:
- except as stated in:
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to:
    - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
    - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Sentence 4.5.1.1.(2), which applies to:
    - tubing or casings and piping for oil or gas wells,
    - transmission pipelines,
    - piping for vehicles, aircraft, watercraft and portable or stationary engines,
    - piping systems in fuel-dispensing stations and distilleries, and
    - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability of the need for carrying out welding and cutting operations for dismantling piping, which could lead to the ignition of vapour from the welding and cutting operations, which could lead to harm to persons.
Application and intent of Division B provisions

A1. Design, construction and installation of flanged joints in welded piping systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. This also applies to:
- vent piping material for aboveground and underground storage tanks containing flammable liquids or combustible liquids, as stated in Sentences 4.3.5.1.(1) and 4.3.10.2.(1),
- materials used for piping, valves and fittings for flammable liquid and combustible liquid installations on piers and wharves [not including marine fuel-dispensing stations], as stated in Sentence 4.8.4.1.(1), and
- piping for flammable liquids or combustible liquids at fuel-dispensing stations, as stated in Sentence 4.6.6.5.(6).

Exception:
- except as stated in Sentence 4.5.5.3.(2), which applies to 50 mm diameter or smaller size welded copper or brass piping systems,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to:
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to:
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent
11. To limit the probability that flanged joints in piping will fail, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Design, construction and installation of flanged joints in welded piping systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. This also applies to:
- vent piping material for aboveground and underground storage tanks containing flammable liquids or combustible liquids, as stated in Sentences 4.3.5.1.(1) and 4.3.10.2.(1),
- materials used for piping, valves and fittings for flammable liquid and combustible liquid installations on piers and wharves [not including marine fuel-dispensing stations], as stated in Sentence 4.8.4.1.(1), and
- piping for flammable liquids or combustible liquids at fuel-dispensing stations, as stated in Sentence 4.6.6.5.(6).

Exception:
- except as stated in Sentence 4.5.5.3.(2), which applies to 50 mm diameter or smaller size welded copper or brass piping systems,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to:
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to:
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

11. To limit the probability that flanged joints in piping will fail, which could lead to the escape of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Application
A1. Design, construction and installation of flanged joints in welded piping systems for flammable liquids or combustible liquids, in buildings, structures and open areas.
A2. This also applies to:
- vent piping material for aboveground and underground storage tanks containing flammable liquids or combustible liquids, as stated in Sentences 4.3.5.1.(1) and 4.3.10.2.(1),
- materials used for piping, valves and fittings for flammable liquid and combustible liquid installations on piers and wharves [not including marine fuel-dispensing stations], as stated in Sentence 4.8.4.1.(1), and
- piping for flammable liquids or combustible liquids at fuel-dispensing stations, as stated in Sentence 4.6.6.5.(6).

Exception:
except as stated in:
- Sentence 4.5.5.3.(2), which applies to 50 mm diameter or smaller size welded copper or brass piping systems,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to:
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to:
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent
I1. To limit the probability that flanged joints in piping will fail, which could lead to the escape of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Bronze flanges for 50 mm diameter or smaller size welded piping systems, where copper and brass piping is permitted, for flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. This also applies to:
- vent piping material for aboveground and underground storage tanks containing flammable liquids or combustible liquids, as stated in Sentences 4.3.5.1.(1) and 4.3.10.2.(1),
- materials used for piping, valves and fittings for flammable liquid and combustible liquid installations on piers and wharves [not including marine fuel-dispensing stations], as stated in Sentence 4.8.4.1.(1), and
- piping for flammable liquids or combustible liquids at fuel-dispensing stations, as stated in Sentence 4.6.6.5.(6).

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To exempt bronze flanges from the application of Sentence 4.5.5.3.(1), which would otherwise require steel flanges, if certain conditions are met [limitation on pipe size, and use of copper and brass piping], on the basis that the bronze flanges provide an acceptable level of safety.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

CodeReference (including record number) 4.5.5.4.(1)-01
Attribution - functional statement/objective F04-OH5

CodeText

1) Bolting materials for flanged connections in steel piping systems for flammable liquids or combustible liquids shall be of alloy steel equivalent to ASTM A 193/A 193M, "Alloy-Steel and Stainless Steel Bolting Materials for High-Temperature Service," Grade B-7.

Application

A1. Alloy steel bolting materials for flanged connections in steel piping systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. This also applies to
- vent piping material for aboveground and underground storage tanks containing flammable liquids or combustible liquids, as stated in Sentences 4.3.5.1.(1) and 4.3.10.2.(1),
- materials used for piping, valves and fittings for flammable liquid and combustible liquid installations on piers and wharves [not including marine fuel-dispensing stations], as stated in Sentence 4.8.4.1.(1), and
- piping for flammable liquids or combustible liquids at fuel-dispensing stations, as stated in Sentence 4.6.6.5.(6).

Exception:
- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
    - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Sentence 4.5.1.1.(2), which applies to
    - tubing or casings and piping for oil or gas wells,
    - transmission pipelines,
    - piping for vehicles, aircraft, watercraft and portable or stationary engines,
    - piping systems in fuel-dispensing stations and distilleries, and
    - piping within the scope of the boilers and pressure vessel regulations under the Safety Codes Act.

Intent

I1. To limit the probability that bolting materials will fail when exposed to fire, which could lead to the failure of the piping connection, which could lead to the spread of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

- vent piping material for aboveground and underground storage tanks containing flammable liquids or combustible liquids, as stated in Sentences 4.3.5.1.(1) and 4.3.10.2.(1),
- materials used for piping, valves and fittings for flammable liquid and combustible liquid installations on piers and wharves [not including marine fuel-dispensing stations], as stated in Sentence 4.8.4.1.(1), and
- piping for flammable liquids or combustible liquids at fuel-dispensing stations, as stated in Sentence 4.6.6.5.(6).

Exception:
except as stated in:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to:
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to:
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent
I1. To limit the probability that bolting materials will fail when exposed to fire, which could lead to the failure of the piping connection, which could lead to the spread of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Alloy steel bolting materials for flanged connections in steel piping systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. This also applies to:
- vent piping material for aboveground and underground storage tanks containing flammable liquids or combustible liquids, as stated in Sentences 4.3.5.1.(1) and 4.3.10.2.(1),
- materials used for piping, valves and fittings for flammable liquid and combustible liquid installations on piers and wharves [not including marine fuel-dispensing stations], as stated in Sentence 4.8.4.1.(1), and
- piping for flammable liquids or combustible liquids at fuel-dispensing stations, as stated in Sentence 4.6.6.5.(6).

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to:
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to:
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that bolting materials will fail when exposed to fire, which could lead to the failure of the piping connection, which could lead to the spread of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Materials for gaskets in flanged connections in piping systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. This also applies to:
- vent piping material for aboveground and underground storage tanks containing flammable liquids or combustible liquids, as stated in Sentences 4.3.5.1.(1) and 4.3.10.2.(1),
- materials used for piping, valves and fittings for flammable liquid and combustible liquid installations on piers and wharves [not including marine fuel-dispensing stations], as stated in Sentence 4.8.4.1.(1), and
- piping for flammable liquids or combustible liquids at fuel-dispensing stations, as stated in Sentence 4.6.6.5.(6).

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent
I1. To limit the probability that gaskets will fail under normal operating conditions or when exposed to fire, which could lead to the failure of the piping connection, which could lead to the spread of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Materials for gaskets in flanged connections in piping systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. This also applies to:
- vent piping material for aboveground and underground storage tanks containing flammable liquids or combustible liquids, as stated in Sentences 4.3.5.1.(1) and 4.3.10.2.(1),
- materials used for piping, valves and fittings for flammable liquid and combustible liquid installations on piers and wharves [not including marine fuel-dispensing stations], as stated in Sentence 4.8.4.1.(1), and
- piping for flammable liquids or combustible liquids at fuel-dispensing stations, as stated in Sentence 4.6.6.5.(6).

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquefied halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to
- tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

I1. To limit the probability that gaskets will fail under normal operating conditions or when exposed to fire, which could lead to the failure of the piping connection, which could lead to the spread of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Materials, resistant to the liquid being carried, for gaskets in flanged connections in piping systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. This also applies to:
- vent piping material for aboveground and underground storage tanks containing flammable liquids or combustible liquids, as stated in Sentences 4.3.5.1.(1) and 4.3.10.2.(1),
- materials used for piping, valves and fittings for flammable liquid and combustible liquid installations on piers and wharves [not including marine fuel-dispensing stations], as stated in Sentence 4.8.4.1.(1), and
- piping for flammable liquids or combustible liquids at fuel-dispensing stations, as stated in Sentence 4.6.6.5.(6).

Exception:
- except as stated in:
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to:
    - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
    - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Sentence 4.5.1.1.(2), which applies to:
    - tubing or casings and piping for oil or gas wells,
    - transmission pipelines,
    - piping for vehicles, aircraft, watercraft and portable or stationary engines,
    - piping systems in fuel-dispensing stations and distilleries, and
    - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

I1. To limit the probability that gaskets will fail under normal operating conditions or when exposed to fire, which could lead to the failure of the piping connection, which could lead to the spread of liquid, which could lead to harm to the public.
Alberta Fire Code 2006

Application and intent of Division B provisions

A1. Ready accessibility for inspection and maintenance and clearance to soil of mechanical connections of underground piping systems that carry flammable liquids or combustible liquids and have no secondary containment.

A2. This also applies to:
- vent piping material for aboveground and underground storage tanks containing flammable liquids or combustible liquids, as stated in Sentences 4.3.5.1.(1) and 4.3.10.2.(1),
- materials used for piping, valves and fittings for flammable liquid and combustible liquid installations on piers and wharves (not including marine fuel-dispensing stations), as stated in Sentence 4.8.4.1.(1), and
- piping for flammable liquids or combustible liquids at fuel-dispensing stations, as stated in Sentence 4.6.6.5.(6).

Exception:
- except as stated in:
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
    - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Sentence 4.5.1.1.(2), which applies to:
    - tubing or casings and piping for oil or gas wells,
    - transmission pipelines,
    - piping for vehicles, aircraft, watercraft and portable or stationary engines,
    - piping systems in fuel-dispensing stations and distilleries, and
    - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent
I. To limit the probability that defects in piping systems or the escape of liquid will go unnoticed, which could lead to appropriate measures not being taken, which could lead to the spread of liquid, which could lead to harm to the public.

II. To limit the probability that premature corrosion will lead to failure of the piping, which could lead to the escape of liquid, which could lead to harm to the public.
1) Where underground piping systems have no secondary containment, mechanical connections shall:
   a) be readily accessible for inspection and maintenance, and
   b) not be in direct contact with the soil.

A2. This also applies to:
   - vent piping material for aboveground and underground storage tanks containing flammable liquids or combustible liquids, as stated in Sentences 4.3.5.1.(1) and 4.3.10.2.(1),
   - materials used for piping, valves and fittings for flammable liquid and combustible liquid installations on piers and wharves (not including marine fuel-dispensing stations), as stated in Sentence 4.8.4.1.(1), and
   - piping for flammable liquids or combustible liquids at fuel-dispensing stations, as stated in Sentence 4.6.6.5.(6).

Exception:
- except as stated in:
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to:
    - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
    - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Sentence 4.5.1.1.(2), which applies to:
    - tubing or casings and piping for oil or gas wells,
    - transmission pipelines,
    - piping for vehicles, aircraft, watercraft and portable or stationary engines,
    - piping systems in fuel-dispensing stations and distilleries, and
    - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

I1. To limit the probability that defects in piping systems or the escape of liquid will go unnoticed, which could lead to appropriate measures not being taken, which could lead to the spread of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.

I2. To limit the probability that premature corrosion will lead to failure of the piping, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.

- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of flammable liquids or combustible liquids for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of flammable liquids or combustible liquids for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of flammable liquids or combustible liquids for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of flammable liquids or combustible liquids for individual farm use and on isolated construction projects,
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Length and direction of piping systems for flammable liquids or combustible liquids installed inside buildings.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of the "Transportation of Dangerous Goods Regulations",
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- the storage of liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Application

F43-OH5

CodeText

2) Where piping for flammable liquids or combustible liquids is installed within a building, the length of piping shall be as direct and as short as practicable.

CodeReference (including record number) 4.5.6.1.(2)-01

Attribution - functional statement/objective F43-OH5

Intent

I1. To limit the probability of the escape of liquid from piping systems, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

A1. Length and direction of piping systems for flammable liquids or combustible liquids installed inside buildings.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Application

F43-OP1.1

Attribution - functional statement/objective

CodeReference (including record number) 4.5.6.1.(2)-02

CodeText

2) Where piping for flammable liquids or combustible liquids is installed within a building, the length of piping shall be as direct and as short as practicable.

Application

A1. Length and direction of piping systems for flammable liquids or combustible liquids installed inside buildings.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability of the escape of liquid from piping systems in buildings, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Application

A1. Length and direction of piping systems for flammable liquids or combustible liquids installed inside buildings.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:

- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability of the escape of liquid from piping systems in buildings, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons.
A1. Use of piping for flammable liquids or combustible liquids.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:

except as stated in

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

I1. To limit the probability that the piping system will be used in a manner that could lead to damage to the system, which could lead to failure of the system, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Use of piping for flammable liquids or combustible liquids.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:

except as stated in

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I. To limit the probability that the piping system will be used in a manner that could lead to damage to the system, which could lead to failure of the system, which could lead to the escape of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Alberta Fire Code 2006

Application and intent of Division B provisions

A1. Use of piping for flammable liquids or combustible liquids.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5., liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

I1. To limit the probability that the piping system will be used in a manner that could lead to damage to the system, which could lead to failure of the system, which could lead to the escape of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Location of vent piping and connections for filling and emptying storage tanks shall be located in conformance with Section 4.3.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception: except as stated in
- Articles 4.3.5.2. and 4.3.10.3., which apply to vent piping,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
- Sentence 4.5.1.1.(2), which applies to
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To direct Alberta Fire Code 2006 users to Section 4.3. for the location of vent piping and connections for filling and emptying storage tanks.
Application and intent of Division B provisions

Alberta Fire Code 2006

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

I1. To limit the probability that vibration and stress on piping and components will lead to failure of the piping and components, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Application

F20,F22-OP1.1

Attribution - functional statement/objective

1) Aboveground outdoor piping shall be supported and arranged to prevent excessive vibration and stress on equipment connected to it.

Application

F20,F22-OP1.1

1) Aboveground outdoor piping shall be supported and arranged to prevent excessive vibration and stress on equipment connected to it.

Intent

F20,F22-OP1.1

1) To limit the probability that vibration and stress on piping and components will lead to failure of the piping and components, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,

1) Aboveground outdoor piping shall be supported and arranged to prevent excessive vibration and stress on equipment connected to it.

Application

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

I1. To limit the probability that vibration and stress on piping and components will lead to failure of the piping and components, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons nearby.
Application and intent of Division B provisions
Alberta Fire Code 2006

A1. Protective guarding devices for fill pipes for storage tanks and aboveground outdoor piping for flammable liquids or combustible liquids, where vehicular, watercraft, or aircraft impact or mechanical damage is possible, in buildings, structures and open areas.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Application

2) Where vehicular, watercraft or aircraft impact or physical damage is possible, protective guarding devices shall be provided for aboveground outdoor piping.

2) Where vehicular, watercraft or aircraft impact or physical damage is possible, protective guarding devices shall be provided for aboveground outdoor piping.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

1. To limit the probability that vehicle, watercraft or aircraft impact on, or mechanical damage to, the piping system will lead to failure of the piping system, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

Application

A1. Protective guarding devices for fill pipes for storage tanks and aboveground outdoor piping for flammable liquids or combustible liquids, where vehicular, watercraft, or aircraft impact or mechanical damage is possible, in buildings, structures and open areas.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.1.

Exception:

except as stated in:
- Sentence 4.1.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

11. To limit the probability that vehicle, watercraft or aircraft impact on, or mechanical damage to, the piping system will lead to failure of the piping system, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Protective guarding devices for fill pipes for storage tanks and aboveground outdoor piping for flammable liquids or combustible liquids, where vehicular, watercraft, or aircraft impact or mechanical damage is possible, in buildings, structures and open areas.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to
- tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

11. To limit the probability that vehicle, watercraft, or aircraft impact on, or mechanical damage to, the piping system will lead to failure of the piping system, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons in outdoor areas or adjacent buildings.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Aboveground piping for flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that premature corrosion will lead to failure of the piping, which could lead to the escape of liquid, which could lead to harm to the public.

I2. To limit the probability that defects in exposed piping systems or the escape of liquid will go unnoticed, which could lead to appropriate measures not being taken, which could lead to the spread of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Aboveground piping for flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that defects in exposed piping systems or the escape of liquid will go unnoticed, which could lead to appropriate measures not being taken, which could lead to the spread of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.

I2. To limit the probability that premature corrosion will lead to failure of the piping, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Aboveground piping for flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:
except as stated in:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to:
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to:
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that piping defects or damage will go unnoticed, which could lead to appropriate measures not being taken, which could lead to the escape and spread of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons.

I2. To limit the probability that premature corrosion will lead to failure of the piping, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Location of aboveground outdoor piping systems for flammable liquids and combustible liquids, with respect to building exterior walls.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Application

a) above windows.

I1. To limit the probability that escaped liquid on exterior walls will lead to a fire starting and spreading on the exterior walls of the building, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.5.6.3.(1)-02
Attribution - functional statement/objective F01-OS1.1,OS1.2

Application

A1. Location of aboveground outdoor piping systems for flammable liquids and combustible liquids, with respect to building exterior walls.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to
- tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

11. To limit the probability that escaped liquid on exterior walls will lead to a fire starting and spreading on the exterior walls of the building, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application
A1. Location of aboveground outdoor piping systems for flammable liquids and combustible liquids, with respect to windows.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

11. To limit the probability that escaped liquid will enter a building through the window opening, which could lead to the spread of liquid inside the building, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.

12. To limit the probability that the piping will be exposed to a fire originating inside the building, which could lead to the failure of the piping, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Application

1) Aboveground outdoor piping shall not be located:
   a) on the exterior of walls except on those of noncombustible construction, or
   b) above windows.

I1. To limit the probability that escaped liquid will enter a building through the window opening, which could lead to the spread of liquid inside the building, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons inside the building.

I2. To limit the probability that the piping will be exposed to a fire originating inside the building, which could lead to the failure of the piping, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

A1. Location of aboveground outdoor piping systems for flammable liquids and combustible liquids, with respect to noncombustible construction for building roofs.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of Dangerous Goods Regulations,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

11. To limit the probability that fire caused by escaped liquid on the roof will grow and spread along the roof, which could lead to damage to the building or facility.
Alberta Fire Code 2006

Application and intent of Division B provisions

CodeReference (including record number) 4.5.6.3.(2)-02

  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that impact on, or physical damage of, the piping system will lead to failure of the piping system, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

A1. Overhead clearance and warning signs where aboveground outdoor piping for flammable liquids and combustible liquids crosses roadways or railways.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that impact on, or physical damage of, the piping system will lead to failure of the piping system, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Aboveground outdoor piping for flammable liquids and combustible liquids passing through secondary containment walls of aboveground storage tanks.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Application

4) Piping passing though the secondary containment walls of an aboveground storage tank shall be designed to prevent excessive stress resulting from settlement or fire exposure.

Intent

I1. To limit the probability that stress on the piping system or its exposure to fire will lead to failure of the piping system, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Aboveground outdoor piping for flammable liquids and combustible liquids passing through secondary containment walls of aboveground storage tanks.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:
- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the storage of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
    - the production, storage or handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Sentence 4.5.1.1.(2), which applies to
    - tubing or casings and piping for oil or gas wells,
    - transmission pipelines,
    - piping for vehicles, aircraft, watercraft and portable or stationary engines,
    - piping systems in fuel-dispensing stations and distilleries, and
    - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that stress on the piping system or its exposure to fire will lead to failure of the piping system, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Design to prevent excessive stress resulting from settlement or fire exposure of aboveground outdoor piping for flammable liquids and combustible liquids passing through secondary containment walls of aboveground storage tanks.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:

- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,

- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Application

4) Piping passing though the secondary containment walls of an aboveground storage tank shall be designed to prevent excessive stress resulting from settlement or fire exposure.

Intent

11. To limit the probability that stress on the piping system or its exposure to fire will lead to failure of the piping system, which could lead to harm to the public.
Application and intent of Division B provisions

Intent

1) To limit the probability that vibrations or settling of an adjacent building or structure will lead to failure of the underground piping system, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Location of underground piping systems for flammable liquids and combustible liquids, with respect to building or structure foundations.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act,
- Article 4.5.6.7., which applies to piping at entrances to buildings.

Intent

11. To limit the probability that the transmission of loads from building or structure foundations will lead to failure of the underground piping system, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Location of underground piping systems for flammable liquids and combustible liquids, with respect to building or structure foundations.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:

except as stated in

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act,
- Article 4.5.6.7., which applies to piping at entrances to buildings.

Intent

11. To limit the probability that the transmission of loads from building or structure foundations will lead to failure of the underground piping system, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
2) Underground piping shall be located not less than 300 mm away from the foundations of any building or structure, except where such piping enters the building as permitted in Article 4.5.6.7.

**Application**

A1. Location of underground piping systems for flammable liquids and combustible liquids, with respect to building or structure foundations.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

*Exception:*

- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act,
- Article 4.5.6.7., which applies to piping at entrances to buildings.

**Intent**

11. To limit the probability that the transmission of loads from building or structure foundations will lead to failure of the underground piping system, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Location of underground piping systems for flammable liquids and combustible liquids, under railway tracks.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:
- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
    - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
  - Sentence 4.5.1.1.(2), which applies to
    - tubing or casings and piping for oil or gas wells,
    - transmission pipelines,
    - piping for vehicles, aircraft, watercraft and portable or stationary engines,
    - piping systems in fuel-dispensing stations and distilleries, and
    - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that train operations will lead to excessive vibrations or ground settling, which could lead to failure of the underground piping system, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Location of underground piping systems for flammable liquids and combustible liquids, under railway tracks.

- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

I1. To limit the probability that normal train operations will lead to excessive vibrations or ground settling, which could lead to failure of the underground piping system, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Ground support for underground piping systems for flammable liquids and combustible liquids.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Application
A1. Ground support for underground piping systems for flammable liquids and combustible liquids.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

I1. To limit the probability that vibrations or ground settling will lead to failure of the underground piping system, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

A1. Ground support for underground piping systems for flammable liquids and combustible liquids.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Application

A1. Ground support for underground piping systems for flammable liquids and combustible liquids.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that vibrations or ground settling will lead to failure of the underground piping system, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Ground support for underground piping systems for flammable liquids and combustible liquids.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

11. To limit the probability that vibrations or ground settling will lead to failure of the underground piping system, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.5.6.5.(1)-04
Attribution - functional statement/objective F21,F81,F20-OH5

CodeText

1) Underground piping shall be
   a) supported on
      i) undisturbed or compacted soil, or
      ii) not less than 150 mm of clean sand, pea gravel or clean crushed stone, and
   b) backfilled on the top and sides with not less than
      i) 300 mm of pea gravel or clean crushed stone, or
      ii) 300 mm of clean sand, free of cinders and stones, and compacted in layers not more than 300
      mm thick.

Application

A1. Backfill to provide top and side support for underground piping systems for flammable liquids
   and combustible liquids.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:
   except as stated in
   - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
   - Sentence 4.1.1.1.(3), which applies to
     - the transportation of flammable liquids or combustible liquids under the "Transportation of
       Dangerous Goods Regulations",
     - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
   - the storage of flammable liquids or combustible liquids on farms for individual farm use and on
     isolated construction projects,
   - the storage of aerosol products covered under Subsection 3.2.5.,
   - liquefied petroleum gas-burning appliances and equipment within the scope of the gas
     regulations made pursuant to the Safety Codes Act,
   - the production, storage or handling of liquefied natural gas within the scope of the gas
     regulations made pursuant to the Safety Codes Act,
   - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash
     points but that may be flammable under certain conditions, and
   - the storage and handling of raw production flammable liquids or combustible liquids and the
     incidental storage and handling of hydrocarbon-based chemicals resulting from or used during
     crude oil or natural gas exploration, production or transmission as mandated under the scope
     of EUB Guide 55,
   - Sentence 4.5.1.1.(2), which applies to
     - tubing or casings and piping for oil or gas wells,
     - transmission pipelines,
     - piping for vehicles, aircraft, watercraft and portable or stationary engines,
     - piping systems in fuel-dispensing stations and distilleries, and
     - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes
       Act.

Intent

I1. To limit the probability that ground settling or the transmission of loads will lead to failure of the
    underground piping system, which could lead to the escape of liquid, which could lead to harm to
    the public.

Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

Application

A1. Classification of sites in accordance with the sensitivity to problems arising from failure to contain the contents of underground piping.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispenser stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To classify a site at which underground piping is located in accordance with the sensitivity of the site.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.5.6.5. (3)-01
Attribution - functional statement/objective Not applicable

CodeText

3) The site sensitivity classification shall be Class A where the underground piping is located within
a) 500 m of wells or other locations where underground water is being used,
b) 200 m of a lake, river or other body of water,
c) 150 m of a major underground structure, or
d) a municipality that has been deemed to require protection from hydrocarbon spills.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Application
A1. Classification of a site in accordance with the sensitivity to problems arising from failure to contain the contents of underground piping.

This applies to sites within
- 500 m of wells or other locations where underground water is being used,
- 200 m of a lake, river or other body of water,
- 150 m of a major underground structure,
- a municipality that has been deemed to require protection from hydrocarbon spills.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent
I1. To classify a site at which an underground piping is located in accordance with its sensitivity by providing appropriate criteria.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Classification of a site in accordance with the sensitivity to problems arising from failure to contain the contents of underground piping.

This applies to sites other than those within:
- 500 m of wells or other locations where underground water is being used,
- 200 m of a lake, river or other body of water,
- 150 m of a major underground structure,
- a municipality that has been deemed to require protection from hydrocarbon spills.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Application

A1. Classification of a site in accordance with the sensitivity to problems arising from failure to contain the contents of underground piping.

This applies to sites other than those within:
- 500 m of wells or other locations where underground water is being used,
- 200 m of a lake, river or other body of water,
- 150 m of a major underground structure,
- a municipality that has been deemed to require protection from hydrocarbon spills.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

11. To classify a site at which underground piping is located in accordance with its sensitivity by providing appropriate criteria.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Prohibition on the installation of underground piping for flammable liquids or combustible liquids at a location with a site sensitivity classification of Class A unless:

- a means of secondary containment is provided,
- a line leak detection device is installed on pressurized or suction piping systems.

Exception:

- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Application

A1. Prohibition on the installation of underground piping for flammable liquids or combustible liquids at a location with a site sensitivity classification of Class A unless:

- a means of secondary containment is provided,
- a line leak detection device is installed on pressurized or suction piping systems.

Exception:

- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability of spills, leaks, or overflows from underground piping located at a Class A site sensitivity location, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

A1. Prohibition on the installation of underground piping for flammable liquids or combustible liquids at a location with a site sensitivity classification of Class B unless a line leak detection device is installed on pressurized or suction piping systems. (See A 4.3.8.1.(6)(f) in Appendix A.)

Exception:

- except as stated in - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
- Sentence 4.5.1.1.(2), which applies to - tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Application

To limit the probability of spills, leaks, or overflows from an underground storage tank located at a Class B site sensitivity location, associated piping or supports, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

Attribution - functional statement/objective F43-OS1.1

CodeText

1) Piping for flammable liquids or combustible liquids shall not be located in service tunnels that are used for pedestrian traffic other than maintenance personnel.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Application

A1. Piping for flammable liquids or combustible liquids, in service tunnels used for pedestrian traffic other than maintenance personnel.

Exception: except as stated in

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability of the escape of liquid in a service tunnel that is used for pedestrian traffic, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons in the tunnel.
Application and intent of Division B provisions

Application

A1. Location of piping for flammable liquids or combustible liquids shall be located aboveground where the piping enters a building.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Application:

1) Piping for flammable liquids or combustible liquids shall be located aboveground where the piping enters a building.

Application:

A1. Location of piping for flammable liquids or combustible liquids, where the piping enters a building.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that piping defects or damage will go unnoticed, which could lead to appropriate measures not being taken, which could lead to the escape and spread of liquid, which could lead to harm to the public.

I2. To limit the probability that ground heave or foundation settling caused by the freeze/thaw cycle will lead to failure of the piping, which could lead to the escape of liquid, which could lead to harm to the public.

I3. To supersede the requirements of Sentence 4.5.6.4.(2) and permit underground piping to be located near building foundations where it enters a building.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Location of piping for flammable liquids or combustible liquids, where the piping enters a building.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- Sentence 4.1.1.1.(3), which applies to the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that piping defects or damage will go unnoticed, which could lead to appropriate measures not being taken, which could lead to the escape and spread of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.

I2. To limit the probability that ground heave or foundation settling caused by the freeze/thaw cycle will lead to failure of the piping, which could lead to the escape of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.

I3. To supersede the requirements of Sentence 4.5.6.4.(2) and permit underground piping to be located near building foundations where it enters a building.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Location of piping for flammable liquids or combustible liquids, where the piping enters a building.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:

  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent
11. To limit the probability that the escape of liquid cannot be minimized during an emergency, which could lead to the spread of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons, including emergency responders.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Pipe sleeves at wall penetrations for aboveground piping for flammable liquids or combustible liquids that is entering a building.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:
- except as stated in - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to - tubing or casings and piping for oil or gas wells,
- - transmission pipelines,
- - piping for vehicles, aircraft, watercraft and portable or stationary engines,
- - piping systems in fuel-dispensing stations and distilleries,
- - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

3) Where piping referred to in Sentence (1) passes through a wall that would restrict the expansion or contraction of the piping, pipe sleeves shall be provided at the wall penetration to facilitate such movement.

I1. To limit the probability that pipe movement [expansion or contraction of the piping] will lead to stress in the piping, which could lead to failure of the piping system, which could lead to the escape of liquid, which could lead to harm to the public.
A1. Pipe sleeves at wall penetrations for aboveground piping for flammable liquids or combustible liquids that is entering a building.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent
11. To limit the probability that pipe movement [expansion or contraction of the piping] will lead to stress in the piping, which could lead to failure of the piping system, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.

Intent

I1. To limit the probability that pipe movement [expansion or contraction of the piping] will lead to stress in the piping, which could lead to failure of the piping system, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Location in trenches or support overhead of piping for flammable liquids or combustible liquids, inside buildings.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception: except as stated in

-  Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
-  Sentence 4.1.1.1.(3), which applies to
   -  the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
   -  appliances and their ancillary equipment within the scope of CAN/CSA-B139,
   -  the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
   -  the storage of aerosol products covered under Subsection 3.2.5.,
   -  liquefied petroleum gas-burning appliances and equipment within the scope of the regulations made pursuant to the Safety Codes Act,
   -  the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
   -  liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
   -  the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
-  Sentence 4.5.1.1.(2), which applies to
   -  tubing or casings and piping for oil or gas wells,
   -  transmission pipelines,
   -  piping for vehicles, aircraft, watercraft and portable or stationary engines,
   -  piping systems in fuel-dispensing stations and distilleries, and
   -  piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that impact or physical damage to the piping system will lead to failure of the piping system, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

2) Piping referred to in Sentence (1) shall not be installed under combustible flooring.

Application

A1. Location of piping for flammable liquids or combustible liquids, with respect to combustible flooring, inside buildings.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that a fire involving the liquid will grow and spread within the flooring, which could lead to the spread of fire to other parts of the building, which could lead to damage to the building.

I2. To limit the probability that the piping will be exposed to a fire originating in the flooring, which could lead to the failure of the piping, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building.
A1. Location of piping for flammable liquids or combustible liquids, with respect to combustible flooring, inside buildings.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

I1. To limit the probability that a fire involving the liquid will grow and spread within the flooring, which could lead to the spread of fire to other parts of the building, which could lead to harm to persons.

I2. To limit the probability that the piping will be exposed to a fire originating in the flooring, which could lead to the failure of the piping, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Application

A1. Trapped drainage systems [spill control] for piping for flammable liquids or combustible liquids installed in trenches, inside buildings.

Exception:
- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To direct Alberta Fire Code 2006 users to Subsection 4.1.6.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Ventilation of, and systems designed to prevent the accumulation of flammable vapours in, trenches for piping for Class I liquids installed in trenches, inside buildings.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Application

2) When piping referred to in Sentence (1) contains Class I liquids, the trench shall be
a) provided with positive ventilation to the outdoors, or
b) designed to prevent the accumulation of flammable vapours.

CodeText

2) When piping referred to in Sentence (1) contains Class I liquids, the trench shall be
a) provided with positive ventilation to the outdoors, or
b) designed to prevent the accumulation of flammable vapours.

Application

A1. Ventilation of, and systems designed to prevent the accumulation of flammable vapours in, trenches for piping for Class I liquids installed in trenches, inside buildings.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that vapours will accumulate in sufficient quantity to form an ignitable mixture, which could lead to their ignition by a nearby ignition source, which could lead to a fire or explosion, which could lead to damage to the building.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Ventilation of, and systems designed to prevent the accumulation of flammable vapours in, trenches for piping for Class I liquids installed in trenches, inside buildings.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Application

A1. Ventilation of, and systems designed to prevent the accumulation of flammable vapours in, trenches for piping for Class I liquids installed in trenches, inside buildings.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that vapours will accumulate in sufficient quantity to form an ignitable mixture, which could lead to their ignition by a nearby ignition source, which could lead to a fire or explosion, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Location of overhead piping systems for flammable liquids or combustible liquids, with respect to ceilings, beams, walls and floors, inside buildings.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Application

F81-OP1.1

1) Overhead piping for flammable liquids or combustible liquids shall be installed close to the ceiling or beams or along walls not less than 1.8 m above the floor to protect it against mechanical damage.

CodeText

I1. To limit the probability that impact or physical damage to the piping system will lead to failure of the piping system, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
**Application and intent of Division B provisions**

**Alberta Fire Code 2006**

**Application**

A1. Location of overhead piping systems for flammable liquids or combustible liquids, with respect to ceilings, beams, walls and floors, inside buildings.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

**Exception:**

- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

**Intent**

11. To limit the probability that impact or physical damage to the piping system will lead to failure of the piping system, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that the piping support system will collapse or fail, which could lead to failure of the piping system, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Application

F20-OS1.1

Attribution - functional statement/objective

2) Where practicable, overhead piping referred to in Sentence (1) shall be supported from building framing members.

Application

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

F20-OS1.1

Attribution - functional statement/objective

1) To limit the probability that the piping support system will collapse or fail, which could lead to failure of the piping system, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

A1. Fastening and support of overhead piping systems for flammable liquids and combustible liquids, in buildings of steel frame construction.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Application

F20-OP1.1

Attribution - functional statement/objective

3) In buildings of steel frame construction, piping referred to in Sentence (1) shall be fastened to steel beams or columns by pipe hangers attached to the flanges.

Intent

I1. To limit the probability that the piping support system will collapse or fail, which could lead to failure of the piping system, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Fastening and support of overhead piping systems for flammable liquids and combustible liquids, in buildings of steel frame construction.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,

- Sentence 4.5.1.1.(2), which applies to
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

I1. To limit the probability that the piping support system will collapse or fail, which could lead to failure of the piping system, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

CodeText
4) Piping under concrete ceilings shall be suspended with the use of through bolts or expansion shields.

Application

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that the piping support system will collapse or fall, which could lead to failure of the piping system, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:

except as stated in:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that the piping support system will collapse or fail, which could lead to failure of the piping system, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.

- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability of excessive stresses in the piping, which could lead to failure of the piping system, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Pipe hangers and other supports for overhead piping systems for flammable liquids and combustible liquids, inside buildings.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Application

F20-OS1.1

1) Piping shall be supported on pipe hangers or other supports so that allowable stresses in the pipe are not exceeded. (See Appendix A.)

CodeText

I1. To limit the probability of excessive stresses in the piping, which could lead to failure of the piping system, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Expansion shield type anchors used to suspend overhead piping systems for flammable liquids and combustible liquids, inside buildings.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the "Transportation of Dangerous Goods Regulations",
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of the "Transportation of Dangerous Goods Regulations",
- the storage of flammable liquids or combustible liquids in the "Transportation of Dangerous Goods Regulations",
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the "Transportation of Dangerous Goods Regulations",
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the "Transportation of Dangerous Goods Regulations",
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the "Transportation of Dangerous Goods Regulations",
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the "Transportation of Dangerous Goods Regulations",
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the "Transportation of Dangerous Goods Regulations",
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the "Transportation of Dangerous Goods Regulations",
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the "Transportation of Dangerous Goods Regulations",
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the "Transportation of Dangerous Goods Regulations",
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
Application and intent of Division B provisions

A1. Expansion shield type anchors used to suspend overhead piping systems for flammable liquids and combustible liquids, inside buildings.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

I1. To limit the probability that the piping support system will collapse or fail, which could lead to failure of the piping system, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Application

A1. Protection of exposed pipe risers against mechanical damage for piping systems for flammable liquids and combustible liquids, in buildings, structures and open areas.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that impact or physical damage to the piping system will lead to failure of the piping system, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Protection of exposed pipe risers against mechanical damage for piping systems for flammable liquids and combustible liquids, in buildings, structures and open areas.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells, transmission pipelines, piping for vehicles, aircraft, watercraft and portable or stationary engines, piping systems in fuel-dispensing stations and distilleries, and piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Application

A1. Protection of exposed pipe risers against mechanical damage for piping systems for flammable liquids and combustible liquids, in buildings, structures and open areas.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Application

1) Exposed pipe risers shall be protected against mechanical damage by
   a) installing such risers
      i) adjacent to walls or pilasters,
      ii) between flanges of steel columns, or
      iii) within securely anchored larger perforated pipe, and
   b) providing mechanical guards where the risers are exposed to mobile equipment.

Application

F81-OS1.1

Attribution - functional statement/objective

1) Exposed pipe risers shall be protected against mechanical damage by
   a) installing such risers
      i) adjacent to walls or pilasters,
      ii) between flanges of steel columns, or
      iii) within securely anchored larger perforated pipe, and
   b) providing mechanical guards where the risers are exposed to mobile equipment.

Intent

I1. To limit the probability that impact or physical damage to the piping system will lead to failure of the piping system, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Design of piping systems for flammable liquids or combustible liquids, with respect to the thermal expansion and contraction of piping systems and the product they convey, in buildings, structures and open areas.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants;
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations";
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Application

A1. Design of piping systems for flammable liquids or combustible liquids, with respect to the thermal expansion and contraction of the piping system and of the product it conveys.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:
- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants;
  - Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations";
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that thermal expansion or contraction will put stress on the piping system, which could lead to failure of the piping system, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Design of piping systems for flammable liquids or combustible liquids, with respect to the thermal expansion and contraction of piping systems and the product it conveys, in buildings, structures and open areas.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:

- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that thermal expansion or contraction will put stress on the piping system, which could lead to failure of the piping system, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
1) In the design of piping systems for flammable liquids or combustible liquids, provision shall be made for the expansion and contraction of the piping system and of the product it conveys.

Application

A1. Design of piping systems for flammable liquids or combustible liquids, with respect to the thermal expansion and contraction of piping systems and the product they convey, in buildings, structures and open areas.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

11. To limit the probability that thermal expansion or contraction will put stress on the piping system, which could lead to failure of the piping system, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Attribution - functional statement/objective F20,F21,F81-OH5

CodeText

2) To prevent excessive stresses resulting from vibration, settling or temperature changes:
   a) flexible non-metallic hose connectors conforming to CAN/ULC-S633, “Flexible Underground Hose Connectors for Flammable and Combustible Liquids,” are permitted to be used where necessary in underground piping systems carrying flammable liquids or combustible liquids,
   b) flexible non-metallic pipe and fittings conforming to ULC/ORD-C971, “Nonmetallic Underground Piping for Flammable and Combustible Liquids,” are permitted to be used where necessary in underground piping systems carrying flammable liquids or combustible liquids, or
   c) flexible metallic hose connectors conforming to ULC/ORD-C536, “Flexible Metallic Hose,” are permitted to be used where necessary in aboveground and underground piping systems carrying flammable liquids or combustible liquids.

Application

A1. Piping systems carrying flammable liquids or combustible liquids, with respect to:
   - flexible non-metallic hose connectors for use on underground piping systems,
   - flexible non-metallic pipe and fittings for use on underground piping systems, and
   - flexible metallic hose connectors for use on aboveground piping systems.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:
   except as stated in
   - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
   - Sentence 4.1.1.1.(3), which applies to
     - the transportation of flammable liquids or combustible liquids under the Transportation of Dangerous Goods Regulations”,
     - appliances and their auxiliary equipment within the scope of CAN/CSA-B139,
     - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
     - the storage of aerosol products covered under Subsection 3.2.5.,
     - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
     - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
     - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
   - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
   - Sentence 4.5.1.1.1.(2), which applies to
     - tubing or casings and piping for oil or gas wells,
     - transmission pipelines,
     - piping for vehicles, aircraft, watercraft and portable or stationary engines,
     - piping systems in fuel-dispensing stations and distilleries, and
     - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that vibration, settling or temperature changes will put stress on the piping system, which could lead to failure of the piping system, which could lead to the escape of liquid, which could lead to harm to the public.
A1. Piping systems carrying flammable liquids or combustible liquids, with respect to
   - flexible non-metallic hose connectors for use on underground piping systems,
   - flexible non-metallic pipe and fittings for use on underground piping systems, and
   - flexible metallic hose connectors for use on aboveground piping systems.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:
   - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
   - Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
   - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
   - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
   - the storage of aerosol products covered under Subsection 3.2.5.,
   - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
   - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
   - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
   - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
   - Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
   - transmission pipelines,
   - piping for vehicles, aircraft, watercraft and portable or stationary engines,
   - piping systems in fuel-dispensing stations and distilleries, and
   - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

2) To prevent excessive stresses resulting from vibration, settling or temperature changes
   a) flexible non-metallic hose connectors conforming to CAN/ULC-S633, "Flexible Underground Hose Connectors for Flammable and Combustible Liquids," are permitted to be used where necessary in underground piping systems carrying flammable liquids or combustible liquids,
   b) flexible non-metallic pipe and fittings conforming to ULC/ORD-C971, "Nonmetallic Underground Piping for Flammable and Combustible Liquids," are permitted to be used where necessary in underground piping systems carrying flammable liquids or combustible liquids, or
   c) flexible metallic hose connectors conforming to ULC/ORD-C536, "Flexible Metallic Hose," are permitted to be used where necessary in aboveground and underground piping systems carrying flammable liquids or combustible liquids.

Application
A1. Piping systems carrying flammable liquids or combustible liquids, with respect to
   - flexible non-metallic hose connectors for use on underground piping systems,
   - flexible non-metallic pipe and fittings for use on underground piping systems, and
   - flexible metallic hose connectors for use on aboveground piping systems.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:
   except as stated in
   - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
   - Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
   - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
   - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
   - the storage of aerosol products covered under Subsection 3.2.5.,
   - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
   - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
   - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
   - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
   - Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
   - transmission pipelines,
   - piping for vehicles, aircraft, watercraft and portable or stationary engines,
   - piping systems in fuel-dispensing stations and distilleries, and
   - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.
Application and intent of Division B provisions

A1. Piping systems carrying flammable liquids or combustible liquids, with respect to
- flexible non-metallic hose connectors for use on underground piping systems,
- flexible non-metallic pipe and fittings for use on underground piping systems, and
- flexible metallic hose connectors for use on aboveground piping systems.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:
- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.;
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
    - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Sentence 4.5.1.1.(2), which applies to
    - tubing or casings and piping for oil or gas wells,
    - transmission pipelines,
    - piping for vehicles, aircraft, watercraft and portable or stationary engines,
    - piping systems in fuel-dispensing stations and distilleries, and
    - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Application

A1. Piping systems carrying flammable liquids or combustible liquids, with respect to
- flexible non-metallic hose connectors for use on underground piping systems,
- flexible non-metallic pipe and fittings for use on underground piping systems, and
- flexible metallic hose connectors for use on aboveground piping systems.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:
- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.;
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
    - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Sentence 4.5.1.1.(2), which applies to
    - tubing or casings and piping for oil or gas wells,
    - transmission pipelines,
    - piping for vehicles, aircraft, watercraft and portable or stationary engines,
    - piping systems in fuel-dispensing stations and distilleries, and
    - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that vibration, settling or temperature changes will put excessive stress on the piping system, which could lead to failure of the piping system, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
A1. Design of valves in piping systems for flammable liquids or combustible liquids, with respect to accommodating system temperatures and pressures, in buildings, structures and open areas.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:
except as stated in
- Sentence 4.5.7.1.(2), which applies to hose nozzle valves,
- Sentence 4.5.7.1.(3), which applies to emergency valves,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

I1. To limit the probability that operating temperatures and pressures will lead to failure of the valves, which could lead to the escape and spread of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

A1. Design of valves in piping systems for flammable liquids or combustible liquids, with respect to accommodating system temperatures and pressures, in buildings, structures and open areas.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:
- except as stated in Sentence 4.5.7.1.(2), which applies to hose nozzle valves,
- Sentence 4.5.7.1.(3), which applies to emergency valves,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to:
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to:
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent
I1. To limit the probability that operating temperatures and pressures will lead to failure of the valves, which could lead to the escape and spread of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Design of valves in piping systems for flammable liquids or combustible liquids, with respect to accommodating system temperatures and pressures, in buildings, structures and open areas.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.1.

Exception:
- except as stated in Sentence 4.5.7.1.(2), which applies to hose nozzle valves;
- Sentence 4.5.7.1.(3), which applies to emergency valves;
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139.
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects;
- the storage of aerosol products covered under Subsection 3.2.5,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that operating temperatures and pressures will lead to failure of the valves, which could lead to the escape and spread of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Hose nozzle valves in piping systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5,
- liquified petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Application

F81,F20-OH5

Attribution - functional statement/objective

2) Every hose nozzle valve shall conform to CAN/ULC-S620, “Hose Nozzle Valves for Flammable and Combustible Liquids.”

I1. To exempt hose nozzle valves from the application of Sentence 4.5.7.1.(1) if the valves conform to a certain standard, on the basis that the standard provides an acceptable level of safety for the valves.

This is to limit the probability that operating temperatures and pressures will lead to failure of the valves, which could lead to the escape and spread of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

A1. Hose nozzle valves in piping systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:

- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,

1) Shut-off valves shall be provided in all flammable liquid or combustible liquid piping and pumping systems.

Application

A1. Shut-off valves in piping and pumping systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of Dangerous Goods Regulations,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

- Sentence 4.5.1.1.(2), which applies to the transportation of oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that the escape of liquid cannot be minimized during an emergency, which could lead to the spread of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Shut-off valves in piping and pumping systems for flammable liquid or combustible liquid, in buildings, structures and open areas.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent
- To limit the probability that the escape of liquid cannot be minimized during an emergency, which could lead to the spread of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons, including emergency responders.
Application and intent of Division B provisions

A1. Location of shut-off valves in piping and pumping systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:

- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Application

2) Where practicable, valves referred to in Sentence (1) shall be located outdoors or be immediately accessible from outdoors.

Intention

I1. To limit the probability that the valves cannot be shut in a timely manner during an emergency, which could lead to the escape of liquid not being minimized, which could lead to the spread of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Location of shut-off valves in piping and pumping systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of Dangerous Goods Regulations,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Application

Attribution - functional statement/objective

2) Where practicable, valves referred to in Sentence (1) shall be located outdoors or be immediately accessible from outdoors.

I1. To limit the probability that the valves cannot be shut in a timely manner during an emergency, which could lead to the escape of liquid not being minimized, which could lead to the spread of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.

CodeReference (including record number) 4.5.7.2.(2)-02

I1. To limit the probability that the valves cannot be shut in a timely manner during an emergency, which could lead to the escape of liquid not being minimized, which could lead to the spread of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Application

A1. Location of shut-off valves in piping and pumping systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:

except as stated in:

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Restriction to steel as the material for shut-off valves in piping systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:
except as stated in
- Sentence 4.5.7.2.(4), which applies to other materials when special conditions warrant their use,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas under the scope of EUB Guide 55,
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.7.2.(5), which applies to
- tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Application

A1. Restriction to steel as the material for shut-off valves in piping systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:
except as stated in
- Sentence 4.5.7.2.(4), which applies to other materials when special conditions warrant their use,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas under the scope of EUB Guide 55,
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.7.2.(5), which applies to
- tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that internal stress or mechanical damage will lead to failure of the valves, which could lead to the escape and spread of liquid, which could lead to harm to the public.

I2. To limit the probability that exposure of the valves to fire will lead to failure of the valves, which could lead to the escape and spread of liquid, which could lead to harm to the public.

- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Application

4) Stainless steel, monel metal or lined steel bodied valves are permitted to be used when special conditions warrant their use.

CodeText

4.5.7.2.(4)-03

Application

A1. Materials for shut-off valves in piping systems for flammable liquids or combustible liquids, where special conditions warrant the use of certain materials other than steel, in buildings, structures and open areas.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

11. To exempt certain valves and materials from the application of Sentence 4.5.7.2.(3) if special conditions warrant their use.

This is to limit the probability that internal stress or mechanical damage will lead to failure of the valves, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Diaphragm valves in piping systems for flammable liquids and combustible liquids, in buildings, structures and open areas.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that liquid will leak from the valve into the air line, which could lead to the accumulation of vapour in sufficient quantity to form an ignitable mixture, which could lead to the ignition of the vapour by an ignition source, which could lead to a fire or explosion, which could lead to damage to the building or facility.

1) Diaphragm valves shall have no direct connections between the liquid and air sections that might permit leakage of the liquid past the packing into the air lines.

II. To limit the probability that liquid will leak from the valve into the air line, which could lead to the accumulation of vapour in sufficient quantity to form an ignitable mixture, which could lead to the ignition of the vapour by an ignition source, which could lead to a fire or explosion, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Diaphragm valves in piping systems for flammable liquids and combustible liquids, in buildings, structures and open areas.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Application

F43-OS1.1

A1. Arrangement of globe valves in piping systems for flammable liquids and combustible liquids, in buildings, structures and open areas.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

I1. To limit the probability that exposure of the valve packing to high pressure will damage the packing, which could lead to the leakage of liquid from the valve, which could lead to harm to the public.

1) Globe valves shall be arranged so that the packing is on the low pressure side.

Application

11. To limit the probability that exposure of the valve packing to high pressure will damage the packing, which could lead to the leakage of liquid from the valve, which could lead to harm to the public.

1) Globe valves shall be arranged so that the packing is on the low pressure side.
A1. Arrangement of globe valves in piping systems for flammable liquids and combustible liquids, in buildings, structures and open areas.

Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Identification of the position [opened or closed] of rising stem or other indicating valves in piping systems for flammable liquids and combustible liquids, in buildings, structures and open areas.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception: except as stated in

1) Rising stem or other indicating valves shall be used where necessary to determine whether the valves are open or shut.

Application

I1. To limit the probability of confusion regarding whether valves are opened or closed, which could lead to delays in shutting off the flow of liquid during an emergency, which could lead to the escape of liquid not being minimized, which could lead to the spread of liquid, which could lead to harm to the public.

- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that the heating system will be an ignition source, which could lead to the ignition of nearby vapour from the piping system, which could lead to a fire or explosion, which could lead to harm to persons.

I2. To limit the probability that liquid in the piping system will be overheated, which could lead to a failure of the piping system to contain the liquid, which could lead to the escape of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Limit on steam pressure used to pressurize piping systems for flammable liquids and combustible liquids, in buildings, structures and open areas in order to make the contents fluid.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Application

F20,F81-OH5

Attribution - functional statement/objective

1) Flammable liquid and combustible liquid piping is permitted to be heated by steam lines provided the minimum steam temperature and pressure to make the liquid fluid are used and Sentences (2) and (3) are complied with.

I1. To limit the probability that a steam line will rupture or break, which could lead to the failure of the piping system, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Application
A1. Limit on steam pressure used to pressurize piping systems for flammable liquids and combustible liquids, in buildings, structures and open areas in order to make the contents fluid.

To limit the probability that a steam line will rupture or break, which could lead to the failure of the piping system, which could lead to the escape of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

Application

A1. Limit of steam temperature used to heat the contents of piping systems for flammable liquids and combustible liquids, in buildings, structures and open areas in order to make the contents fluid.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to
- tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

11. To limit the probability that liquid in the piping system will be overheated, which could lead to a failure of the piping system to contain the liquid, which could lead to the escape of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Application

A1. Steam used to heat piping systems for flammable liquids and combustible liquids, in buildings, structures and open areas.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:

- except as stated in - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to - tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

11. To state the application of Sentences 4.5.8.2.(2) and 4.5.8.2.(3).
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Pressure regulator and relief valve in a steam line used to heat piping systems for flammable liquids and combustible liquids, in buildings, structures and open areas.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5,
  - liquified petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Application

I1. To limit the probability that a steam line will rupture or break, which could lead to the failure of the piping system, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Pressure regulator and relief valve in a steam line used to heat piping systems for flammable liquids and combustible liquids, in buildings, structures and open areas.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

I1. To limit the probability that a steam line will rupture or break, which could lead to the failure of the piping system, which could lead to the escape of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Application

A1. Pressure regulator and relief valve in a steam line used to heat piping systems for flammable liquids and combustible liquids, in buildings, structures and open areas.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:

except as stated in

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that a steam line will rupture or break, which could lead to the failure of the piping system, which could lead to the escape of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Insulation of steam lines and piping for flammable liquids and combustible liquids, in buildings, structures and open areas.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139.

F01,F81-OP1.1

Attribution - functional statement/objective

3) Piping and steam lines shall be enclosed in insulation conforming to the Alberta Building Code 2006.

Application

4.5.8.2.(3)-01

CodeReference (including record number)

I1. To limit the probability of heat loss from steam lines and piping being heated, which could lead to the lines or piping becoming an ignition source, which could lead to the ignition of nearby combustible materials, which could lead to a fire or explosion, which could lead to damage to the building or facility.

I2. To limit the probability of heat transfer from steam lines and heated piping systems to other piping, which could lead to liquid being overheated, which could lead to failure of the piping system to contain the liquid, which could lead to the escape of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.

I3. To expand the application of the Alberta Building Code 2006 to insulation of indoor [existing buildings] and outdoor steam lines and piping for flammable liquids and combustible liquids.

Intent
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Insulation of steam lines and piping for flammable liquids and combustible liquids, in buildings, structures and open areas.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:

- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability of heat loss from steam lines and piping being heated, which could lead to the lines or piping becoming an ignition source, which could lead to the ignition of nearby combustible materials, which could lead to a fire or explosion, which could lead to harm to persons.

I2. To limit the probability of heat transfer from steam lines and heated piping systems to other piping, which could lead to liquid being overheated, which could lead to failure of the piping system to contain the liquid, which could lead to the escape of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons.

I3. To expand the application of the Alberta Building Code 2006 to insulation of indoor [existing buildings] and outdoor steam lines and piping for flammable liquids and combustible liquids.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Electrical heating cables including electrical induction heating for piping for flammable liquids and combustible liquids, in buildings, structures and open areas.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:

except as stated in

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Thermal electrical conduction heating using low-voltage alternating current, for piping for flammable liquids and combustible liquids, in buildings, structures and open areas.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

I1. To state the application of Sentence 4.5.8.4.(2).
A1. Criteria applying to thermal electrical conduction heating using low-voltage alternating current, for piping for flammable liquids and combustible liquids, in buildings, structures and open areas, including:
- isolation of unheated sections of piping from heated sections by means of nonconductive fittings,
- lowest practical rating of thermostatic controls, high temperature limit controls and fuses that will ensure satisfactory operation,
- enclosure of all parts of the piping and fittings by insulating coverings of a type that will prevent accidental grounding of the systems.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

I1. To limit the probability that the heating systems will be an ignition source, which could lead to the ignition of nearby vapour from escaped liquid from the piping system, which could lead to a fire or explosion, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Lowest practical rating [to ensure satisfactory operation] of thermostatic controls, high temperature limit controls and fuses for thermal electrical conduction heating using low-voltage alternating current, for piping for flammable liquids and combustible liquids, in buildings, structures and open areas.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.;
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I. To limit the probability that liquid will be overheated, which could lead to failure of the piping system to contain the liquid, which could lead to the escape of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

Application

A1. Lowest practical rating [to ensure satisfactory operation] of thermostatic controls, high temperature limit controls and fuses for thermal electrical conduction heating using low-voltage alternating current, for piping for flammable liquids and combustible liquids, in buildings, structures and open areas.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that liquid will be overheated, which could lead to failure of the piping system to contain the liquid, which could lead to the escape of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Location [in an area not subject to flammable vapours] of switches, transformers, contactors and other spark-producing equipment for thermal electrical conduction heating using low-voltage alternating current, for piping for flammable liquids and combustible liquids, in buildings, structures and open areas.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:
- except as stated in - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to - tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Application

A1. Location [in an area not subject to flammable vapours] of switches, transformers, contactors and other spark-producing equipment for thermal electrical conduction heating using low-voltage alternating current, for piping for flammable liquids and combustible liquids, in buildings, structures and open areas.

2) Systems permitted in Sentence (1) shall be installed and tested as complete units and shall conform to the following:
   a) unheated sections of piping shall be isolated from heated sections by means of nonconductive fittings,
   b) thermostatic controls, high temperature limit controls and fuses shall have the lowest practical rating to ensure satisfactory operation,
   c) all parts of the piping and fittings shall be enclosed by insulating coverings of a type that will prevent accidental grounding of the systems, and
   d) switches, transformers, contactors and other spark-producing equipment shall be located in an area not subject to flammable vapours.

Exception:
- except as stated in - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to - tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that location of an ignition source will lead to ignition of nearby vapour, which could lead to a fire or explosion, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.5.8.4.(3)-01
Attribution - functional statement/objective F82.F01.F20-OS1.1

CodeText

3) Upon completion of installation, systems permitted in Sentence (1) shall be tested to ensure that all components are functioning as intended.

Application

A1. Testing of completed system installations for thermal electrical conduction heating using low-voltage alternating current, for piping for flammable liquids and combustible liquids, in buildings, structures and open areas.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:

- except as stated in - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to - tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that the heating systems will be an ignition source, which could lead to the ignition of nearby vapour from escaped liquid from the piping system, which could lead to a fire or explosion, which could lead to harm to persons.

I2. To limit the probability that liquid will be overheated, which could lead to failure of the piping system to contain the liquid, which could lead to the escape of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Testing of completed system installations for thermal electrical conduction heating using low-voltage alternating current, for piping for flammable liquids and combustible liquids, in buildings, structures and open areas.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception: except as stated in

- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquid natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

11. To limit the probability that liquid will be overheated, which could lead to failure of the piping system to contain the liquid, which could lead to the escape of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Use of open flames as a heat source for heating piping for flammable liquids or combustible liquids, in buildings, structures and open areas.

A2. This also applies on piers and wharves, as stated in Sentence 4.8.4.1.(1).

Exception:

except as stated in

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that an open flame will be an ignition source, which could lead to the ignition of nearby vapour from escaped liquid from the piping system, which could lead to a fire or explosion, which could lead to harm to persons.
Application and intent of Division B provisions

CodeText

1) Pumps for flammable liquid or combustible liquid piping systems installed aboveground and outside of buildings shall be located not less than:
   a) 3 m from the property line, and
   b) 1.5 m from building openings.

Application

A1. Location, with respect to property lines, of pumps for flammable liquid or combustible liquid piping systems installed aboveground and outside of buildings.

Exception:
- except as stated in:
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that an ignition source from an adjacent property will ignite vapour from the pump, which could lead to a fire or explosion, which could lead to damage to adjacent buildings or facilities.

I2. To limit the probability that vapour from the pump will accumulate on the adjacent property, which could lead to ignition of the vapour from an ignition source on the adjacent property, which could lead to a fire or explosion, which could lead to damage to adjacent buildings or facilities.
Application and intent of Division B provisions
 Alberta Fire Code 2006

Application and intent of Division B provisions

- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that other uses will create ignition sources, which could lead to ignition of vapours [likely to be present around this type of equipment and operation], which could lead to a fire or explosion, which could lead to harm to persons.

I2. To limit the probability that other uses will increase the fire load, which could lead to the spread of fire in the room beyond the point of fire origin, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Design, with respect to withstanding forces, of pits for
- subsurface pumps for piping systems, or
- piping connected to submersible pumps.

This applies to flammable liquid and combustible liquid piping systems in buildings, structures and open areas.

A2. This also applies at fuel-dispensing stations, as stated in Sentence 4.6.2.6.(1).

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

I1. To limit the probability that forces on the pits will lead to structural failure of the pits, which could lead to stress or physical damage to the piping system, which could lead to failure of the piping system, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

**Application**

A1. Design, with respect to withstanding forces, of pits for
- subsurface pumps for piping systems, or
- piping connected to submersible pumps.

This applies to flammable liquid and combustible liquid piping systems in buildings, structures and open areas.

A2. This also applies at fuel-dispensing stations, as stated in Sentence 4.6.2.6.(1).

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

**Intent**

I1. To limit the probability that forces on the pits will lead to structural failure of the pits, which could lead to stress or physical damage to the piping system, which could lead to failure of the piping system, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Maximum size of pits [required for inspection and maintenance] for
- subsurface pumps for piping systems, or
- piping connected to submersible pumps.

This applies to flammable liquid and combustible liquid piping systems in buildings, structures and open areas.

A2. This also applies at fuel-dispensing stations, as stated in Sentence 4.6.2.6.(1).

Exception:
- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells, transmission pipelines, piping for vehicles, aircraft, watercraft and portable or stationary engines, piping systems in fuel-dispensing stations and distilleries, and piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Application

F01-OP1.1 and F02-OP1.2

I1. To limit the probability that other uses will create ignition sources, which could lead to ignition of vapours [likely to be present around this type of equipment and operation], which could lead to a fire or explosion, which could lead to damage to the building or facility.

I2. To limit the probability that other uses will increase the fire load, which could lead to the spread of fire in the room beyond the point of fire origin, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Maximum size of pits [required for inspection and maintenance] for

Alberta Fire Code 2006

Application and intent of Division B provisions

CodeReference (including record number) 4.5.9.3.(2)-03
Attribution - functional statement/objective F81-OS1.1

A1. Covering of pits for
- subsurface pumps for piping systems, or
- piping connected to submersible pumps.

This applies to flammable liquid and combustible liquid piping systems in buildings, structures and open areas.

A2. This also applies at fuel-dispensing stations, as stated in Sentence 4.6.2.6.(1).

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage and handling of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage and handling of flammable liquids or combustible liquids in buildings, structures and open areas,
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage and handling of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage and handling of flammable liquids or combustible liquids in buildings, structures and open areas,
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage and handling of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage and handling of flammable liquids or combustible liquids in buildings, structures and open areas,
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage and handling of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage and handling of flammable liquids or combustible liquids in buildings, structures and open areas,
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage and handling of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage and handling of flammable liquids or combustible liquids in buildings, structures and open areas,
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage and handling of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage and handling of flammable liquids or combustible liquids in buildings, structures and open areas,
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage and handling of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage and handling of flammable liquids or combustible liquids in buildings, structures and open areas,
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage and handling of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage and handling of flammable liquids or combustible liquids in buildings, structures and open areas,
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage and handling of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage and handling of flammable liquids or combustible liquids in buildings, structures and open areas,
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage and handling of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage and handling of flammable liquids or combustible liquids in buildings, structures and open areas,
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability of delays in shutting off the flow of liquid if one switch cannot be reached or is made inoperative during an emergency, which could lead to the escape of liquid not being minimized, which could lead to the spread of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

Exception:

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

1) Pumps for piping systems shall be provided with duplicate control switches to shut down the pumps in case of emergency, with one located in the operating area and the other at a remote location.

1) Pumps for piping systems shall be provided with duplicate control switches to shut down the pumps in case of emergency, with one located in the operating area and the other at a remote location.

I1. To limit the probability of delays in shutting off the flow of liquid if one switch cannot be reached or is made inoperative during an emergency, which could lead to the escape of liquid not being minimized, which could lead to the spread of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

Exception:

except as stated in:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,

- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
- transfer of crude oil and natural gas as mandated under the scope of EUB Guide 55.
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
- transfer of crude oil and natural gas as mandated under the scope of EUB Guide 55.
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
- transfer of crude oil and natural gas as mandated under the scope of EUB Guide 55.
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
- transfer of crude oil and natural gas as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability of delays in shutting off the flow of liquid during an emergency, which could lead to the escape of liquid not being minimized, which could lead to the spread of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons, including emergency responders.
Application and intent of Division B provisions

A1. Transfer of flammable liquids or combustible liquids by water pressure as a result of displacement, such system shall not be used for liquids that are miscible in water.

Exception:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent
I1. To limit the probability that liquid will be contaminated with water, which could lead to malfunctions in transfer and damage to pumps or piping, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Transfer of flammable liquids or combustible liquids by water pressure as a result of displacement, in buildings, structures and open areas.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that liquid will be contaminated with water, which could lead to malfunctions in transfer and damage to pumps or piping, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Transfer of flammable liquids or combustible liquids by water pressure as a result of displacement, in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that liquid will be contaminated with water, which could lead to malfunctions in transfer and damage to pumps or piping, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.

2) All pressure vessels for hydraulic transfer systems referred to in Sentence (1) shall be constructed, installed and tested in conformance with boiler and pressure vessel regulations made pursuant to the Safety Codes Act.

Application

A1. Construction, installation and testing of pressure vessels for hydraulic transfer systems used in the transfer of flammable liquids or combustible liquids by water pressure as a result of displacement, in buildings, structures and open areas.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to
- tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that the vessel will fail structurally, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Application

A1. Construction, installation and testing of pressure vessels for hydraulic transfer systems used in the transfer of flammable liquids or combustible liquids by water pressure as a result of displacement, in buildings, structures and open areas.

Exception:

- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the transportation of dangerous goods regulations made pursuant to the Safety Codes Act,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells, transmission pipelines, piping systems in fuel-dispensing stations and distilleries, and piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that the vessel will fail structurally, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Construction, installation and testing of pressure vessels for hydraulic transfer systems used in the transfer of flammable liquids or combustible liquids by water pressure as a result of displacement, in buildings, structures and open areas.

Exception:
- except as stated in - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
- Sentence 4.5.1.1.(2), which applies to - tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessel regulations under the Safety Codes Act.

Application

A1. Construction, installation and testing of pressure vessels for hydraulic transfer systems used in the transfer of flammable liquids or combustible liquids by water pressure as a result of displacement, in buildings, structures and open areas.

Exception:
- except as stated in - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
- Sentence 4.5.1.1.(2), which applies to - tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessel regulations under the Safety Codes Act.

Intent

I1. To limit the probability that the vessel will fail structurally, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Design, with respect to water pressure, of hydraulic transfer systems used in the transfer of flammable liquids or combustible liquids by water pressure as a result of displacement, in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells, transmission pipelines, piping for vehicles, aircraft, watercraft and portable or stationary engines, piping systems in fuel-dispensing stations and distilleries, and piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

3) Hydraulic transfer systems referred to in Sentence (1) shall be designed to prevent water pressure in excess of the design pressure of the tank or piping.

Application

A1. Design, with respect to water pressure, of hydraulic transfer systems used in the transfer of flammable liquids or combustible liquids by water pressure as a result of displacement, in buildings, structures and open areas.

Exception:
- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Sentence 4.5.1.1.(2), which applies to
    - tubing or casings and piping for oil or gas wells, transmission pipelines, piping for vehicles, aircraft, watercraft and portable or stationary engines, piping systems in fuel-dispensing stations and distilleries, and piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that hydraulic transfer systems will be overpressurized, which could lead to a failure of the tank or piping system to contain liquid, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

Application

A1. Design, with respect to water pressure, of hydraulic transfer systems used in the transfer of flammable liquids or combustible liquids by water pressure as a result of displacement, in buildings, structures and open areas.

Exception:

- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that hydraulic transfer systems will be overpressurized, which could lead to a failure of the tank or piping system to contain liquid, which could lead to the escape of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.

3) Hydraulic transfer systems referred to in Sentence (1) shall be designed to prevent water pressure in excess of the design pressure of the tank or piping.

Application

A1. Design, with respect to water pressure, of hydraulic transfer systems used in the transfer of flammable liquids or combustible liquids by water pressure as a result of displacement, in buildings, structures and open areas.

Exception:

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants;
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations";
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139;
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects;
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that hydraulic transfer systems will be overpressurized, which could lead to a failure of the tank or piping system to contain liquid, which could lead to the escape of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Valves for controlling operating pressures in hydraulic transfer systems used in the transfer of flammable liquids or combustible liquids by water pressure as a result of displacement, in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent
I1. To limit the probability that hydraulic transfer systems will be overpressurized, which could lead to a failure of the tank or piping system to contain liquid, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Valves for controlling operating pressures in hydraulic transfer systems used in the transfer of flammable liquids or combustible liquids by water pressure as a result of displacement, in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Application

4) Operating pressures shall be controlled by a constant-level float valve or a pressure-regulating valve on the water supply side of the hydraulic transfer system referred to in Sentence (1).

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that hydraulic transfer systems will be overpressurized, which could lead to a failure of the tank or piping system to contain liquid, which could lead to the escape of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Valves for controlling operating pressures in hydraulic transfer systems used in the transfer of flammable liquids or combustible liquids by water pressure as a result of displacement, in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that hydraulic transfer systems will be overpressurized, which could lead to a failure of the tank or piping system to contain liquid, which could lead to the escape of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Hydraulic transfer systems used in the transfer of flammable liquids or combustible liquids by water pressure as a result of displacement, in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Application

A1. Hydraulic transfer systems used in the transfer of flammable liquids or combustible liquids by water pressure as a result of displacement, in buildings, structures and open areas.

Exception:
- except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to
- tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that hydraulic transfer systems will be overpressurized, which could lead to a failure of the tank or piping system to contain liquid, which could lead to the escape of liquid, which could lead to harm to the public.

5) Hydraulic transfer systems referred to in Sentence (1) shall be arranged so that there is no water pressure on the system except when liquid is being discharged.

Application

A1. Hydraulic transfer systems used in the transfer of flammable liquids or combustible liquids by water pressure as a result of displacement, in buildings, structures and open areas.

Exception:
- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Sentence 4.5.1.1.(2), which applies to
    - tubing or casings and piping for oil or gas wells,
    - transmission pipelines,
    - piping for vehicles, aircraft, watercraft and portable or stationary engines,
    - piping systems in fuel-dispensing stations and distilleries, and
    - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that hydraulic transfer systems will be overpressurized, which could lead to a failure of the tank or piping system to contain liquid, which could lead to the escape of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.5.9.5.(5)-03
Attribution - functional statement/objective F81,F20-O51.1

CodeText

5) Hydraulic transfer systems referred to in Sentence (1) shall be arranged so that there is no water pressure on the system except when liquid is being discharged.

Application

A1. Hydraulic transfer systems used in the transfer of flammable liquids or combustible liquids by water pressure as a result of displacement, in buildings, structures and open areas.

Exception:

except as stated in - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants, - Sentence 4.1.1.1.(3), which applies to - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations", - appliances and their ancillary equipment within the scope of CAN/CSA-B139, - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects, - the storage of aerosol products covered under Subsection 3.2.5., - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act, - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act, - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55, - Sentence 4.5.1.1.(2), which applies to - tubing or casings and piping for oil or gas wells, - transmission pipelines, - piping for vehicles, aircraft, watercraft and portable or stationary engines, - piping systems in fuel-dispensing stations and distilleries, and - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that hydraulic transfer systems will be overpressurized, which could lead to a failure of the tank or piping system to contain liquid, which could lead to the escape of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Check valves to prevent back-flow in hydraulic transfer systems for the transfer of flammable liquids or combustible liquids by water pressure as a result of displacement, in buildings, structures and open areas.

Exception:
- except as stated in - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to - tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

6) Check valves shall be provided for both water and flammable liquid or combustible liquid piping to prevent backflow in hydraulic transfer systems referred to in Sentence (1).

Application

A1. Check valves to prevent backflow in hydraulic transfer systems for the transfer of flammable liquids or combustible liquids by water pressure as a result of displacement, in buildings, structures and open areas.

Exception:

except as stated in
- Sentence 4.1.1.1.2, which applies to unique hazards in process plants,
- Sentence 4.1.1.1.3, which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.2, which applies to
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that liquid will be contaminated with water, which could lead to malfunctions in transfer and damage to pumps or piping, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.

A1. Check valves to prevent back-flow in hydraulic transfer systems for the transfer of flammable liquids or combustible liquids by water pressure as a result of displacement, in buildings, structures and open areas.

Exception:

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that liquid will be contaminated with water, which could lead to malfunctions in transfer and damage to pumps or piping, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Construction, installation and testing of pressure vessels involved in the transfer of flammable liquids or combustible liquids as a result of displacement by the expansion of nitrogen, carbon dioxide or other inert gases in piping systems, in buildings, structures and open areas.

Exception:

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants;
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations";
- Appliances and their ancillary equipment within the scope of CAN/CSA-B139;
- The storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects;
- The storage of aerosol products covered under Subsection 3.2.5.;
- Liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act;
- The production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act;
- Liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55;
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells, transmission pipelines, piping for vehicles, aircraft, watercraft and portable or stationary engines, piping systems in fuel-dispensing stations and distilleries, and piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

11. To limit the probability that the vessel will fail structurally, which could lead to the escape of liquid, which could lead to harm to the public.
A1. Construction, installation and testing of pressure vessels involved in the transfer of flammable liquids or combustible liquids as a result of displacement by the expansion of nitrogen, carbon dioxide or other inert gases in piping systems, in buildings, structures and open areas.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

I1. To limit the probability that the vessel will structurally fail, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Construction, installation and testing of pressure vessels involved in the transfer of flammable liquids or combustible liquids as a result of displacement by nitrogen, carbon dioxide or other inert gases in piping systems, in buildings, structures and open areas.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

1) Where flammable liquids or combustible liquids are transferred as a result of displacement by the expansion of nitrogen, carbon dioxide or other inert gases, all pressure vessels involved shall be constructed, installed and tested in conformance with boiler and pressure vessel regulations made pursuant to the Safety Codes Act.

I1. To limit the probability that the vessel will fail structurally, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
A1. Pressure regulators located in the gas line of inert gas transfer systems used for the transfer of flammable liquids or combustible liquids as a result of displacement by the expansion of nitrogen, carbon dioxide or other inert gases, in buildings, structures and open areas.

Exception:\nexcept as stated in:  
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,  
- Sentence 4.1.1.1.(3), which applies to \textit{the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations"},  
- \textit{appliances and their ancillary equipment within the scope of CAN/CSA-B139},  
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,  
- the storage of aerosol products covered under Subsection 3.2.5.,  
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,  
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,  
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and  
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,  
- Sentence 4.5.1.1.(2), which applies to \textit{tubing or casings and piping for oil or gas wells},  
- \textit{transmission pipelines},  
- \textit{piping for vehicles, aircraft, watercraft and portable or stationary engines},  
- \textit{piping systems in fuel-dispensing stations and distilleries}, and  
- \textit{piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act}.

\textbf{Application}\n
I1. To limit the probability that inert gas transfer systems will be overpressurized, which could lead to a failure of the system to contain liquid, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Attribution - functional statement/objective F81,F20-OP*1,1

CodeText

2) Pressure regulators for inert gas transfer systems referred to in Sentence (1) shall be provided in the gas line to control the pressure of the gas at the minimum pressure required to force the liquid through the piping system at the required rate.

Application

A1. Pressure regulators located in the gas line of inert gas transfer systems used for the transfer of flammable liquids or combustible liquids as a result of displacement by the expansion of nitrogen, carbon dioxide or other inert gases, in buildings, structures and open areas.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to
- tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

11. To limit the probability that inert gas transfer systems will be overpressurized, which could lead to a failure of the system to contain liquid, which could lead to the escape of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Application

A1. Pressure regulators located in the gas line of inert gas transfer systems used for the transfer of flammable liquids or combustible liquids as a result of displacement by the expansion of nitrogen, carbon dioxide or other inert gases, in buildings, structures and open areas.

Exception:

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that inert gas transfer systems will be overpressurized, which could lead to a failure of the system to contain liquid, which could lead to the escape of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons.
A1. Location of relief valves for inert gas transfer systems used for the transfer of flammable liquids or combustible liquids as a result of displacement by the expansion of nitrogen, carbon dioxide or other inert gases, in buildings, structures and open areas.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

I1. To limit the probability that inert gas transfer systems will be overpressurized, which could lead to a failure of the system to contain liquid, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

Attribution - functional statement/objective F81,F20-OP1.1

CodeText

3) A relief valve with a slightly higher setting than the pressure required in Sentence (2) shall be provided on the downstream side of the regulator or on the tank.

Application

A1. Location of relief valves for inert gas transfer systems used for the transfer of flammable liquids or combustible liquids as a result of displacement by the expansion of nitrogen, carbon dioxide or other inert gases, in buildings, structures and open areas.

Exception:

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to
- tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I. To limit the probability that inert gas transfer systems will be overpressurized, which could lead to a failure of the system to contain liquid, which could lead to the escape of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
A1. Location of relief valves for inert gas transfer systems used for the transfer of flammable liquids or combustible liquids as a result of displacement by the expansion of nitrogen, carbon dioxide or other inert gases, in buildings, structures and open areas.

Exception:

except as stated in

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Sentence 4.5.1.1.(2), which applies to
    - tubing or casings and piping for oil or gas wells,
    - transmission pipelines,
    - piping for vehicles, aircraft, watercraft and portable or stationary engines,
    - piping systems in fuel-dispensing stations and distilleries, and
    - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

I1. To limit the probability that inert gas transfer systems will be overpressurized, which could lead to a failure of the system to contain liquid, which could lead to the escape of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Application

A1. Means of automatically shutting off gas supply and bleeding gas pressure in the event of fire, for inert gas transfer systems used for the transfer of flammable liquids or combustible liquids as a result of displacement by the expansion of nitrogen, carbon dioxide or other inert gases, in buildings, structures and open areas.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells, transmission pipelines, piping for vehicles, aircraft, watercraft and portable or stationary engines, piping systems in fuel-dispensing stations and distilleries, and piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that inert gas transfer systems will be overpressurized when exposed to fire, which could lead to a failure of the system to contain liquid, which could lead to the escape of liquid, which could lead to harm to the public.
Application

A1. Means of automatically shutting off gas supply and bleeding gas pressure in the event of fire, for inert gas transfer systems used for the transfer of flammable liquids or combustible liquids as a result of displacement by the expansion of nitrogen, carbon dioxide or other inert gases, in buildings, structures and open areas.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells, transmission pipelines, piping for vehicles, aircraft, watercraft and portable or stationary engines, piping systems in fuel-dispensing stations and distilleries, and piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that inert gas transfer systems will be overpressurized when exposed to fire, which could lead to a failure of the system to contain liquid, which could lead to the escape of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Means of automatically shutting off gas supply and bleeding gas pressure in the event of fire, for inert gas transfer systems used for the transfer of flammable liquids or combustible liquids as a result of displacement by the expansion of nitrogen, carbon dioxide or other inert gases, in buildings, structures and open areas.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells, transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent
I1. To limit the probability that inert gas transfer systems will be overpressurized when exposed to fire, which could lead to a failure of the system to contain liquid, which could lead to the escape of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Prohibition on the use of compressed air or other non-inert gases for the transfer of flammable liquids or combustible liquids in closed piping systems, in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.5.9.7.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(2), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- Sentence 4.1.1.1.(4), which applies to the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Application

A1. Prohibition on the use of compressed air or other non-inert gases for the transfer of flammable liquids or combustible liquids in closed piping systems, in buildings, structures and open areas.

Exception:
- except as permitted in Sentence (2), the transfer of flammable liquids or combustible liquids in a closed piping system by means of compressed air or other non-inert gas pressure shall not be permitted.

Intent

I1. To limit the probability of contact between the liquid and non-inert gas, which could lead to an adverse reaction, which could lead to the ignition of vapour, which could lead to a fire or explosion, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.5.9.7.(2)-01
Attribution - functional statement/objective F01-O81.1

CodeText

1) A non-inert gas pressure is permitted to be used in a closed piping system referred to in Sentence (1) provided
a) it is the vapour or gas of the flammable liquid or combustible liquid being transferred, or
b) it is a vapour or gas that will not support combustion reaction and is non-reactive with the flammable liquid or combustible liquid being transferred.

Application

A1. Use of non-inert gas pressure in the transfer of flammable liquids or combustible liquids in closed piping systems, where the non-inert gas is
- the vapour or gas of the flammable liquid or combustible liquid being transferred, or
- a vapour or gas that will not support combustion reaction and is non-reactive with the flammable liquid or combustible liquid being transferred.

This applies to buildings, structures and open areas.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells, transmission pipelines, piping for vehicles, aircraft, watercraft and portable or stationary engines, piping systems in fuel-dispensing stations and distilleries, and piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

11. To exempt non-inert gas pressure from the application of Sentence 4.5.9.7.(1) if certain conditions are met.

This is to limit the probability of contact between the liquid and non-inert gas, which could lead to an adverse reaction, which could lead to the ignition of vapour, which could lead to a fire or explosion, which could lead to harm to persons.
A1. Standard procedures for normal operation and for emergencies, for employees engaged in the operation of equipment for the transfer of flammable liquids or combustible liquids in piping systems, in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants;
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139;
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act;
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act;
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

I1. To limit the probability that persons will not carry out proper procedures during normal operations and emergencies, which could lead to delays or mistakes, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

A1. Standard procedures for normal operation and for emergencies, for employees engaged in the operation of equipment for the transfer of flammable liquids or combustible liquids in piping systems, in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,

     - the storage of aerosol products covered under Subsection 3.2.5.,
     - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
     - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
   - the halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
   - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
   - Sentence 4.5.1.1.(2), which applies to
     - tubing or casings and piping for oil or gas wells,
     - transmission pipelines,
     - piping for vehicles, aircraft, watercraft and portable or stationary engines,
     - piping systems in fuel-dispensing stations and distilleries, and
     - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability of delays or ineffectiveness in responding to a fire emergency, which could lead to the spread of fire beyond the point of origin, which could lead to harm to persons, including emergency responders.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Training of employees related to the colour coding and identification system for flammable liquids or combustible liquids in piping systems, in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Application

A1. Training of employees related to the colour coding and identification system for flammable liquids or combustible liquids in piping systems, in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability of delays in shutting off the flow of liquid during an emergency, which could lead to the escape of liquid not being minimized, which could lead to the spread of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Training of employees related to the colour coding and identification system for flammable liquids or combustible liquids in piping systems, in buildings, structures and open areas.

Exception:
- except as stated in - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and

- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Application

A1. Training of employees related to the colour coding and identification system for flammable liquids or combustible liquids in piping systems, in buildings, structures and open areas.

I1. To limit the probability of delays in shutting off the flow of liquid during an emergency, which could lead to the escape of liquid not being minimized, which could lead to the spread of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.

I2. To limit the probability of mixing incompatible liquids during normal operations, which could lead to a fire or explosion, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

CodeReference (including record number) 4.5.10.2.(1)-(11) Attribution - functional statement/objective F12.F81-OS5.1

CodeText

1) All employees concerned with transfer operations involving flammable liquids or combustible liquids shall be trained in

a) the procedures referred to in Article 4.5.10.1.,

b) the importance of constant attendance during all loading or unloading operations,

c) extinguishing procedures for fires involving flammable liquids and combustible liquids, and
d) the flammable liquid and combustible liquid colour coding and identification system required in Article 4.5.7.6.

Application

A1. Training of employees related to the colour coding and identification system for flammable liquids or combustible liquids in piping systems, in buildings, structures and open areas.

Exception: except as stated in

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,

- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,

- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,

- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,

- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and

- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,

- Sentence 4.5.1.1.(2), which applies to
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability of delays in shutting off the flow of liquid during an emergency, which could lead to the escape of liquid not being minimized, which could lead to the spread of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons, including emergency responders.

I2. To limit the probability of mixing incompatible liquids during normal operations, which could lead to a fire or explosion, which could lead to harm to persons.

2) Employees engaged in the operation of equipment for the transfer of flammable liquids or combustible liquids shall be trained in the location, function and operation of valves used for the operation of fire protection equipment and manual emergency shut-off valves.

Application

A1. Training of employees concerning the location, function, and operation of manual emergency shut-off valves related to the transfer of flammable liquids or combustible liquids in piping systems, in buildings, structures and open areas.

Exception:

- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I. To limit the probability that the escape of liquid cannot be minimized during an emergency, which could lead to the spread of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

Application

A1. Training of employees concerning the location, function, and operation of manual emergency shut-off valves related to the transfer of flammable liquids or combustible liquids in piping systems, in buildings, structures and open areas.

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their auxiliary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

I1. To limit the probability of delays or ineffectiveness in responding to a fire emergency, which could lead to the spread of fire beyond the point of origin, which could lead to harm to persons, including emergency responders.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Posting of signs indicating the location of valves used for the operation of fire protection equipment and manual emergency shut-off valves shall be posted in conspicuous locations.

Exception:
- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act;
  - the production, storage or handling of liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act;
  - the storage of flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Sentence 4.5.1.1.(2), which applies to
    - tubing or casings and piping for oil or gas wells,
    - transmission pipelines,
    - piping for vehicles, aircraft, watercraft and portable or stationary engines,
    - pipeline systems in fuel-dispensing stations and distilleries, and
    - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Application

A1. Posting of signs indicating the location of valves used for the operation of fire protection equipment and manual emergency shut-off valves for flammable liquid and combustible liquid piping systems, in buildings, structures and open areas.

Exception:
- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act;
  - the production, storage or handling of liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act;
  - the storage of flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  - Sentence 4.5.1.1.(2), which applies to
    - tubing or casings and piping for oil or gas wells,
    - transmission pipelines,
    - piping for vehicles, aircraft, watercraft and portable or stationary engines,
    - pipeline systems in fuel-dispensing stations and distilleries, and
    - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability of delays or ineffectiveness in responding to a fire emergency, which could lead to the spread of fire beyond the point of origin, which could lead to damage to the building or facility.

I2. To limit the probability that the escape of liquid cannot be minimized during an emergency, which could lead to the spread of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

**Application**

A1. Posting of signs indicating the location of valves used for the operation of fire protection equipment and manual emergency shut-off valves shall be posted in conspicuous locations.

Exception:
- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to

- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability of delays or ineffectiveness in locating and using extinguishers in a fire emergency, which could lead to the spread of fire beyond the point of origin, which could lead to harm to persons.
Application and intent of Division B provisions

Alberna Fire Code 2006

A1. Establishment and frequency of visual inspections at operations involving piping systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Application

1) A visual inspection routine for the prompt detection of obviously abnormal conditions shall be established and shall be performed at least once each shift.

CodeText

I1. To limit the probability that exposed piping system defects or the escape of liquid will go unnoticed, which could lead to appropriate measures not being taken, which could lead to the spread of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.5.10.5.(1)-02
Attribution - functional statement/objective F82-OP1.1

CodeText

1) A visual inspection routine for the prompt detection of obviously abnormal conditions shall be established and shall be performed at least once each shift.

Application

A1. Establishment and frequency of visual inspections at operations involving piping systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that exposed piping system defects or the escape of liquid will go unnoticed, which could lead to appropriate measures not being taken, which could lead to the spread of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Establishment and frequency of visual inspections at operations involving piping systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants;
- Sentence 4.1.1.1.(3), which applies to - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations";
- appliances and their ancillary equipment within the scope of CAN/CSA-B139;
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects;
- the storage of aerosol products covered under Subsection 3.2.5.;
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act;
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act;
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55;,
- Sentence 4.5.1.1.(2), which applies to - tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- pipelines for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Application

1) A visual inspection routine for the prompt detection of obviously abnormal conditions shall be established and shall be performed at least once each shift.

Intent

11. To limit the probability that exposed piping system defects or the escape of liquid will go unnoticed, which could lead to appropriate measures not being taken, which could lead to the spread of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons.

  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that exposed piping system defects or the escape of liquid will go unnoticed, which could lead to appropriate measures not being taken, which could lead to the spread of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Frequency of visual inspections at operations involving aboveground piping systems, pumps and other ancillary equipment for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Application

A1. Frequency of visual inspections at operations involving aboveground piping systems, pumps and other ancillary equipment for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that exposed piping system defects or the escape of liquid will go unnoticed, which could lead to appropriate measures not being taken, which could lead to the spread of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Flammable vapour leakage detection devices [when a visual inspection is not practicable or conclusive] used for conducting inspections [required in Sentences Sentence 4.5.10.5.(1) and Sentence 4.5.10.5.(2)] on piping systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the storage of aerosol products covered under Subsection 3.2.5.,
- Sentence 4.1.1.1.(2), which applies to
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that vapour leakage will go unnoticed during a visual inspection, which could lead to appropriate measures not being taken, which could lead to liquid continuing to escape, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Flammable vapour leakage detection devices [when a visual inspection is not practicable or conclusive] used for conducting inspections [required in Sentences Sentence 4.5.10.5.(1) and Sentence 4.5.10.5.(2)] on piping systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells, transmission pipelines, piping for vehicles, aircraft, watercraft and portable or stationary engines, piping systems in fuel-dispensing stations and distilleries, and piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

3) Where necessary, flammable vapour indicators shall be used to detect leakage.

Application

A1. Flammable vapour leakage detection devices [when a visual inspection is not practicable or conclusive] used for conducting inspections [required in Sentences Sentence 4.5.10.5.(1) and Sentence 4.5.10.5.(2)] on piping systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells, transmission pipelines, piping for vehicles, aircraft, watercraft and portable or stationary engines, piping systems in fuel-dispensing stations and distilleries, and piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that vapour leakage will go unnoticed during a visual inspection, which could lead to appropriate measures not being taken, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Flammable vapour leakage detection devices [when a visual inspection is not practicable or conclusive] used for conducting inspections [required in Sentences Sentence 4.5.10.5.(1) and Sentence 4.5.10.5.(2)] on piping systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:
except as stated in

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that vapour leakage will go unnoticed during a visual inspection, which could lead to appropriate measures not being taken, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Alberta Fire Code 2006

Application and intent of Division B provisions

A1. Prohibition on the use of open flames and spark-producing devices for flammable vapour leakage detection (referred to in Sentence 4.5.10.5.(2)) at operations involving aboveground piping systems for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

I1. To limit the probability that such devices and open flames will ignite vapour, which could lead to a fire or explosion, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

A1. Frequency of inspections and tests of safety shut-off valves and other fire safety devices, with particular attention directed to normally open, fusible-link operated valves, float valves and automatic controls, at operations involving piping systems for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

I1. To limit the probability that safety shut-off valves and other fire safety devices will not operate properly during an emergency, which could lead to delays in shutting off the flow of liquid, which could lead to the escape of liquid not being minimized, which could lead to the spread of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

**CodeReference** (including record number) 4.5.10.6.(1)-02
**Attribution - functional statement/objective** F82-OP1.1

**CodeText**

1) To ensure proper operation, monthly inspections and tests shall be made of all safety shut-off valves and other fire safety devices, with particular attention directed to normally open, fusible-link operated valves, float valves and automatic controls.

**Application**

A1. Frequency of inspections and tests of safety shut-off valves and other fire safety devices with special attention to normally open, fusible-link-operated valves, float valves and automatic controls, at operations involving piping systems for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

**Intent**

11. To limit the probability that safety shut-off valves and other fire safety devices will not operate properly during an emergency, which could lead to delays in shutting off the flow of liquid, which could lead to the escape of liquid not being minimized, which could lead to the spread of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

A1. Frequency of inspections and tests of safety shut-off valves and other fire safety devices with special attention to normally open, fusible-link operated valves, float valves and automatic controls, at operations involving piping systems for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants;
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”;
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects;
- appliances and their ancillary equipment within the scope of CAN/CSA-B139;
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act;
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects;
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act;
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of rad production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55;
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells;
- transmission pipelines;
- piping for vehicles, aircraft, watercraft and portable or stationary engines;
- piping systems in fuel-dispensing stations and distilleries; and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent
11. To limit the probability that safety shut-off valves and other fire safety devices will not operate properly during an emergency, which could lead to delays in shutting off the flow of liquid, which could lead to the escape of liquid not being minimized, which could lead to the spread of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons, including emergency responders.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Retention of records relating to inspections and tests of safety shut-off valves and other fire safety devices with special attention to normally open, fusible-link-operated valves, float valves and automatic controls, at operations involving piping systems for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent
I1. To state the application of Article 2.2.1.2. of Division C.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Maintenance of piping systems for flammable liquids and combustible liquids, in buildings, structures and open areas.

Application

Except as provided in Sentence (6), maintenance shall not be carried out on piping systems while they are under pressure.

Exception:
- Sentence 4.5.10.7.(6), which applies to connections to pressurized piping systems made in conformance with good engineering practice;
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants;
- Sentence 4.1.1.1.(3), which applies to:
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations";
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - appliances and their ancillary equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the storage and handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
- Sentence 4.5.1.1.(2), which applies to:
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that piping systems will leak during maintenance operations, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.

I2. To limit the probability that the maintenance operations will lead to the ignition of vapour from the piping system, which could lead to a fire or explosion, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Maintenance of piping systems for flammable liquids and combustible liquids, in buildings, structures and open areas.

Application

1) Except as provided in Sentence (6), maintenance shall not be carried out on piping systems while they are under pressure.

Application

1) Except as stated in
- Sentence 4.5.10.7.(6), which applies to connections to pressurized piping systems made in conformance with good engineering practice;
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants;
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations";
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139;
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects;
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act;
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act;
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
- Sentence 4.5.1.1.(2), which applies to
  - tubing or casings and piping for oil or gas wells,
  - transmission pipelines,
  - piping for vehicles, aircraft, watercraft and portable or stationary engines,
  - piping systems in fuel-dispensing stations and distilleries, and
  - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

1. To limit the probability that piping systems will leak during maintenance operations, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Opening [for maintenance or repair] of piping or connections in piping systems for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception: except as stated in
- Sentence 4.5.10.7.(6), which applies to connections to pressurized piping systems made in conformance with good engineering practice;
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants;
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations";
- appliances and their ancillary equipment within the scope of CAN/CSA-B139.
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects;
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the "Transportation of Dangerous Goods Regulations";
- the transport of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations";
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act;
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act.

Intent

I1. To limit the probability that piping systems will leak during maintenance or repair operations, which could lead to the escape of liquid, which could lead to harm to the public.

CodeText

2) If connections or piping are to be opened, the system shall be drained of flammable liquids and combustible liquids.

Application

A1. Opening [for maintenance or repair] of piping or connections in piping systems for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in
  Sentence 4.5.10.7.(6), which applies to connections to pressurized piping systems made in conformance with good engineering practice;
  Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”;
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  the storage of aerosol products covered under Subsection 3.2.5.,
  liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
  Sentence 4.5.1.1.(2), which applies to
    - tubing or casings and piping for oil or gas wells,
    - transmission pipelines,
    - piping for vehicles, aircraft, watercraft and portable or stationary engines,
    - piping systems in fuel-dispensing stations and distilleries, and
    - piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that piping systems will leak during maintenance or repair operations, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

 Alberta Fire Code 2006

Application and intent of Division B provisions

4.5.10.7.(3)-01

A1. Repair of equipment for handling flammable liquids or combustible liquids in piping systems, in buildings, structures and open areas.

Application

A1. Repair of equipment for handling flammable liquids or combustible liquids in piping systems, in buildings, structures and open areas.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent

I1. To limit the probability that the repair operations will create an ignition source near the piping system, which could lead to the ignition of vapour from the piping system, which could lead to a fire or explosion, which could lead to harm to persons.
A1. Identification of valves that are shut off for maintenance purposes on piping systems for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent
I1. To limit the probability that a valve will be mistakenly opened, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Intent
I1. To limit the probability that piping will leak, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Maintenance operations involving connections to pressurized piping systems for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception: except as stated in:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Application

6) Connections to pressurized piping systems shall be made in conformance with good practice such as that described in:
- API 1104, "Welding of Pipelines and Related Facilities."
- API 2200, "Repairs to Crude Oil, Liquefied Petroleum Gas and Products Pipelines."
- API 2201, "Welding or Hot Tapping on Equipment in Service."

6) Connections to pressurized piping systems shall be made in conformance with good practice such as that described in:
- API 1104, "Welding of Pipelines and Related Facilities."
- API 2200, "Repairs to Crude Oil, Liquefied Petroleum Gas and Products Pipelines."
- API 2201, "Welding or Hot Tapping on Equipment in Service."

Intent

I1. To exempt maintenance operations on pressurized systems from the application of Sentence 4.5.10.7.(1) if certain practices are carried out.

This is to limit the probability that the piping systems will leak during maintenance operations, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Maintenance operations involving connections to pressurized piping systems for flammable liquids and combustible liquids, in buildings, structures and open areas.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55,
- Sentence 4.5.1.1.(2), which applies to tubing or casings and piping for oil or gas wells,
- transmission pipelines,
- piping for vehicles, aircraft, watercraft and portable or stationary engines,
- piping systems in fuel-dispensing stations and distilleries, and
- piping within the scope of the boilers and pressure vessels regulations under the Safety Codes Act.

Application

6) Connections to pressurized piping systems shall be made in conformance with good practice such as that described in a) API 1104, "Welding of Pipelines and Related Facilities," b) API 2200, "Repairs to Crude Oil, Liquefied Petroleum Gas and Products Pipelines," or c) API 2201, "Welding or Hot Tapping on Equipment in Service."

6) Connections to pressurized piping systems shall be made in conformance with good practice such as that described in
- a) API 1104, "Welding of Pipelines and Related Facilities."
- b) API 2200, "Repairs to Crude Oil, Liquefied Petroleum Gas and Products Pipelines."
- c) API 2201, "Welding or Hot Tapping on Equipment in Service."

6) Connections to pressurized piping systems shall be made in conformance with good practice such as that described in
- a) API 1104, "Welding of Pipelines and Related Facilities."
- b) API 2200, "Repairs to Crude Oil, Liquefied Petroleum Gas and Products Pipelines."
- c) API 2201, "Welding or Hot Tapping on Equipment in Service."

6) Connections to pressurized piping systems shall be made in conformance with good practice such as that described in
- a) API 1104, "Welding of Pipelines and Related Facilities."
- b) API 2200, "Repairs to Crude Oil, Liquefied Petroleum Gas and Products Pipelines."
- c) API 2201, "Welding or Hot Tapping on Equipment in Service."

6) Connections to pressurized piping systems shall be made in conformance with good practice such as that described in
- a) API 1104, "Welding of Pipelines and Related Facilities."
- b) API 2200, "Repairs to Crude Oil, Liquefied Petroleum Gas and Products Pipelines."
- c) API 2201, "Welding or Hot Tapping on Equipment in Service."

6) Connections to pressurized piping systems shall be made in conformance with good practice such as that described in
- a) API 1104, "Welding of Pipelines and Related Facilities."
- b) API 2200, "Repairs to Crude Oil, Liquefied Petroleum Gas and Products Pipelines."
- c) API 2201, "Welding or Hot Tapping on Equipment in Service."

6) Connections to pressurized piping systems shall be made in conformance with good practice such as that described in

- a) API 1104, "Welding of Pipelines and Related Facilities."
- b) API 2200, "Repairs to Crude Oil, Liquefied Petroleum Gas and Products Pipelines."
- c) API 2201, "Welding or Hot Tapping on Equipment in Service."

6) Connections to pressurized piping systems shall be made in conformance with good practice such as that described in
- a) API 1104, "Welding of Pipelines and Related Facilities."
- b) API 2200, "Repairs to Crude Oil, Liquefied Petroleum Gas and Products Pipelines."
- c) API 2201, "Welding or Hot Tapping on Equipment in Service."

6) Connections to pressurized piping systems shall be made in conformance with good practice such as that described in
- a) API 1104, "Welding of Pipelines and Related Facilities."
- b) API 2200, "Repairs to Crude Oil, Liquefied Petroleum Gas and Products Pipelines."
- c) API 2201, "Welding or Hot Tapping on Equipment in Service."

6) Connections to pressurized piping systems shall be made in conformance with good practice such as that described in
- a) API 1104, "Welding of Pipelines and Related Facilities."
- b) API 2200, "Repairs to Crude Oil, Liquefied Petroleum Gas and Products Pipelines."
- c) API 2201, "Welding or Hot Tapping on Equipment in Service."

6) Connections to pressurized piping systems shall be made in conformance with good practice such as that described in
- a) API 1104, "Welding of Pipelines and Related Facilities."
- b) API 2200, "Repairs to Crude Oil, Liquefied Petroleum Gas and Products Pipelines."
- c) API 2201, "Welding or Hot Tapping on Equipment in Service."

6) Connections to pressurized piping systems shall be made in conformance with good practice such as that described in
- a) API 1104, "Welding of Pipelines and Related Facilities."
- b) API 2200, "Repairs to Crude Oil, Liquefied Petroleum Gas and Products Pipelines."
- c) API 2201, "Welding or Hot Tapping on Equipment in Service."

6) Connections to pressurized piping systems shall be made in conformance with good practice such as that described in
- a) API 1104, "Welding of Pipelines and Related Facilities."
- b) API 2200, "Repairs to Crude Oil, Liquefied Petroleum Gas and Products Pipelines."
- c) API 2201, "Welding or Hot Tapping on Equipment in Service."

6) Connections to pressurized piping systems shall be made in conformance with good practice such as that described in
- a) API 1104, "Welding of Pipelines and Related Facilities."
- b) API 2200, "Repairs to Crude Oil, Liquefied Petroleum Gas and Products Pipelines."
- c) API 2201, "Welding or Hot Tapping on Equipment in Service."

Intent

I1. To exempt maintenance operations on pressurized systems from the application of Sentence 4.5.10.7.(1) if certain practices are carried out. This is to limit the probability that
- the piping systems will leak during maintenance operations, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons, and
- the maintenance operations will lead to the ignition of vapour from the piping system, which could lead to a fire or explosion, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.6.1.1.(1)-01
Attribution - functional statement/objective Not applicable

CodeText

1) This Section applies to the storage, handling and use of flammable liquids, combustible liquids and Class 2.1 gases at fuel-dispensing stations.

Application

A2. This also applies to
- fuel dispensing operations located either inside or outside of buildings,
- self-service outlets and marine fuel-dispensing stations, and
- Class 2.1 flammable gases at fuel-dispensing stations, as stated in Sentence 4.6.1.1.(2).

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To state the application of Section 4.6.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Storage and dispensing of Class 2.1 flammable gases at fuel-dispensing stations.

Exception:
- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

A1. Storage and dispensing of Class 2.1 flammable gases at fuel-dispensing stations.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I. To limit the probability that the storage or dispensing of certain [Class 2.1] gases will lead to a fire or explosion, which could lead to harm to persons in buildings or outdoor areas.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.6.1.1.(2)-02
Attribution - functional statement/objective Not applicable

CodeText

2) Except as provided in this Section, the storage and dispensing of Class 2.1 flammable gases at fuel-dispensing stations shall conform to gas regulations made pursuant to the Safety Codes Act. (See Appendix A.)

Application

A1. Storage and dispensing of Class 2.1 flammable gases at fuel-dispensing stations.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To make the provisions of Section 4.6. [that relate to the storage and dispensing of Class 2.1 flammable gases at fuel dispensing stations] apply in the absence of requirements in the referenced regulations.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

**CodeReference**: (including record number) 4.6.1.1.(3)-01
**Attribution - functional statement/objective**: Not applicable

**CodeText**

3) Requirements of this Section that pertain to the location of dispensers, storage tanks, pumps, piping and their ancillary equipment inside buildings shall not apply to a canopy that is open on not less than 75% of its perimeter.

**Application**

A1. Canopies that are open on not less than 75% of their perimeter, where the dispensing of fuel having a flash point below 37.8°C is carried out.

This Section applies to:
- fuel-dispensing operations located either inside or outside of buildings,
- self-service outlets and marine fuel-dispensing stations, and
- the storage and dispensing of Class 2.1 flammable gases at fuel-dispensing stations, as stated in Sentence 4.6.1.1.(2).

**Exception:**

except as stated in:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to:
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

**Intent**

I1. To permit fuel-dispensing operations to be carried out inside a building, on the basis that the building design provides direct ventilation to the outdoors, thus limiting the probability that vapours will accumulate to ignitable concentrations or migrate to other parts of the building.
Application and intent of Division B provisions

Application

Application

1) Except as provided in Sentences (2), (3), and (4), the installation of outside aboveground storage tanks at fuel-dispensing stations shall be in conformance with Subsection 4.3.2.

Application

A1. Installation of outside aboveground storage tanks for flammable liquids and combustible liquids at fuel-dispensing stations.

Exception:

except as stated in

- Sentence 4.6.2.1.(2), which applies to individual and aggregate tank capacity limits,
- Sentence 4.6.2.1.(3), which applies to individual and aggregate tank capacity limits exceeding those stated in Sentence 4.6.2.1.(2),
- Sentence 4.6.2.1.(4), which provides for certain additional safety and security measures,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To direct Alberta Fire Code 2006 users to Subsection 4.3.2.
Application and intent of Division B provisions

Alberta Fire Code 2006

Applicability

A1. Maximum individual and aggregate capacities of outside aboveground storage tanks at fuel-dispensing stations shall have an individual capacity of not more than 50 000 L, and their aggregate capacity shall not exceed 150 000 L. (See Appendix A.)

Exception:

- Sentence 4.6.2.1.(3), which applies to outside aboveground storage tanks for Class II and IIIA liquids used exclusively at fleet vehicle fuel-dispensing stations or cardlock installations,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
-appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

2) Except as permitted by Sentence (3), outside aboveground storage tanks at fuel-dispensing stations shall have an individual capacity of not more than 50 000 L, and their aggregate capacity shall not exceed 150 000 L. (See Appendix A.)

Intent

I1. To limit the probability that a fire involving the storage tanks will spread beyond the point of origin, which could lead to damage to the building or facility.

I2. To exempt the aboveground storage tanks from, and reduce the capacity limits of, Subsection 4.3.2. [as stated in Sentence 4.6.2.1.(1)].
A1. Maximum individual and aggregate capacities of outside aboveground storage tanks at fuel-dispensing stations.

Exception:
- except as stated in Sentence 4.6.2.1.(3), which applies to outside aboveground storage tanks for Class II and IIIA liquids used exclusively at fleet vehicle fuel-dispensing stations or cardlock installations,
- Sentence 4.1.1.1.(2), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

I1. To limit the probability that a fire involving the storage tanks will spread beyond the point of origin, which could lead to harm to persons.

I2. To exempt the aboveground storage tanks from, and reduce the capacity limits of, Subsection 4.3.2. [as stated in Sentence 4.6.2.1.(1)].
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Maximum individual and aggregate capacities of outside aboveground storage tanks at fuel-dispensing stations and used exclusively at fleet vehicle fuel-dispensing stations or cardlock installations shall have an individual capacity of not more than 75 000 L, and their aggregate capacity shall not exceed 225 000 L. (See Appendix A.)

A1. Maximum individual and aggregate capacities of outside aboveground storage tanks for Class II and IIIA liquids used exclusively at fleet vehicle fuel-dispensing stations or cardlock installations, and used exclusively at fleet vehicle fuel-dispensing stations or cardlock installations.

Exception:
- Sentence 4.6.2.1.(3), which applies to outside aboveground storage tanks for Class II and IIIA liquids used exclusively at fleet vehicle fuel-dispensing stations or cardlock installations,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

A1. Maximum individual and aggregate capacities of outside aboveground storage tanks at fuel-dispensing stations and used exclusively at fleet vehicle fuel-dispensing stations or cardlock installations.

Exception: except as stated in
- Sentence 4.6.2.1.(3), which applies to outside aboveground storage tanks for Class II and IIIA liquids used exclusively at fleet vehicle fuel-dispensing stations or cardlock installations,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that a fire involving the storage tanks will spread beyond the point of origin, which could lead to harm to persons.

I2. To exempt the aboveground storage tanks from, and reduce the capacity limits of, Subsection 4.3.2. (as stated in Sentence 4.6.2.1.(1)).
Application and intent of Division B provisions

Application

A1. Physical protection against collision damage of outside aboveground storage tanks at fuel-dispensing stations.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to: the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations"
- appliances and their ancillary equipment within the scope of CAN/CSA-B139
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that vehicle impact on, or mechanical damage to, the tank or ancillary equipment will lead to failure of the tank or equipment, which could lead to the escape of liquid, which could lead to harm to the public.

I2. To require additional safety measures to those of the basic requirements of Subsection 4.3.2. [as stated in Sentence 4.6.2.1.(1)].
Application and intent of Division B provisions

A1. Physical protection against collision damage of outside aboveground storage tanks at fuel-dispensing stations.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of
    Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on
    isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas
    regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas
    regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash
    points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the
    incidental storage and handling of hydrocarbon-based chemicals resulting from or used during
    crude oil or natural gas exploration, production or transmission as mandated under the scope
    of EUB Guide 55.

Intent

I1. To direct Alberta Fire Code 2006 users to Subsection 4.3.7.
A1. Identification of liquids in containers for packaged flammable liquid and combustible liquid products stored or sold at fuel-dispensing stations.

Exception:
except as stated in
- Sentence 4.1.1.1(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
A1. Containers for packaged flammable liquid and combustible liquid products stored or sold at fuel-dispensing stations shall be in closed containers conforming to Article 4.2.3.1., distinctly marked with the generic name of the liquid they contain.

Exception:
- except as stated in Sentence 4.2.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.2.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139, the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent
I1. To expand the application of Article 4.2.3.1., which would otherwise not apply at fuel dispensing stations [as stated in Clause 4.2.1.1.1.(2)(a)].
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Materials for piping systems containing flammable liquids or combustible liquids at a fuel-dispensing station shall be in conformance with Article 4.5.2.1.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

Not applicable

- the storage of aerosol products covered under Subsection 3.2.5,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

**Application**

A1. Corrosion protection for piping, valves and fittings used for flammable liquids and combustible liquids at fuel-dispensing stations.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

**Intent**

I1. To expand the application of Article 4.5.3.1., which would otherwise not apply at fuel dispensing stations [as stated in Clause 4.5.1.1.(2)(c)].
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

1) Piping shall be firmly supported and protected by installing guards when necessary to prevent vehicular, watercraft or aircraft impact damage, or other physical damage.

Exception:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that the impact of vehicles, watercraft, or aircraft on, or mechanical damage to, piping will lead to failure of the piping, which could lead to the escape of liquid, which could lead to harm to the public.

I2. To limit the probability that vibration or excessive movement of the piping will lead to failure of the piping, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeText

1) Piping shall be firmly supported and protected by installing guards when necessary to prevent vehicular, watercraft or aircraft impact damage, or other physical damage.

Application

A1. Physical protection and support of piping for flammable liquids or combustible liquids, at fuel-dispensing stations.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that the impact of vehicles, watercraft, or aircraft on, or mechanical damage to, piping will lead to failure of the piping, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.

I2. To limit the probability that vibration or excessive movement of the piping will lead to failure of the piping, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.

CodeReference (including record number) 4.6.2.6.(1)-01
Attribution - functional statement/objective Not applicable

A1. Pits for subsurface pumps or for piping connected to submersed pumps, used for flammable liquids and combustible liquids at fuel-dispensing stations.

A2. This also applies to remote pumps, inside buildings, used for flammable liquids and combustible liquids, as stated in Sentence 4.6.6.4.(2).

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent
1. To expand the application of Article 4.5.9.3., which would otherwise not apply at fuel dispensing stations [as stated in Clause 4.5.1.1.(2)(c)].
Application and intent of Division B provisions

A1. Fixed dispensers for flammable liquids or combustible liquids at fuel-dispensing stations.

Exception:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquified natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent
I1. To limit the probability that the operation of dispensers will lead to a spark or ignition source, which could lead to the ignition of vapour, which could lead to harm to persons.
I2. To limit the probability that dispensers will release liquid or vapour in an uncontrolled manner, which could lead to the ignition of vapour, which could lead to harm to persons.

1) Fixed dispensers for flammable liquids or combustible liquids shall conform to CSA B346-M, "Power-Operated Dispensing Devices for Flammable Liquids."

Application

A1. Fixed dispensers for flammable liquids or combustible liquids at fuel-dispensing stations.

Exception:
- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
    - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that dispensers will release liquid in an uncontrolled manner, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Installation of sumps for flammable liquids or combustible liquids, in buildings, structures and open areas.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

CodeText

1) Fixed dispensers for Class I liquids shall be installed outside buildings and not less than
   a) 3 m from any right-of-way and any property line,
   b) 3 m from any propane gas dispenser,
   c) 1.5 m from any natural gas dispenser,
   d) 6 m horizontally from any fixed source of ignition,
   e) 6 m horizontally from any liquefied petroleum gas cylinder or tank,
   f) 3 m from any building openings, other than those that serve as shelter for operating personnel
      and in which electrical installations conform to Article 4.1.4.1.,
   g) 6 m from any manhole or sewer opening (see Appendix A).

Application

A1. Location of fixed dispensers for Class I liquids at fuel-dispensing stations with respect to
distance from openings in buildings that serve as shelter for operating personnel and in which
electrical installations conform to Article 4.1.4.1.

A2. This also applies to the minimum distance of ignition sources from tank vehicles [when located
on a property covered by this Code] and their delivery equipment, during loading and unloading
operations, as stated in Sentence 4.11.3.2.(1).

Exception:
   except as stated in
   - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
   - Sentence 4.1.1.1.(3), which applies to
     - the transportation of flammable liquids or combustible liquids under the "Transportation of
       Dangerous Goods Regulations",
     - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
     - the storage of flammable liquids or combustible liquids on farms for individual farm use and on
       isolated construction projects,
     - the storage of aerosol products covered under Subsection 3.2.5.,
     - liquefied petroleum gas-burning appliances and equipment within the scope of the gas
       regulations made pursuant to the Safety Codes Act,
     - the production, storage or handling of liquefied natural gas within the scope of the gas
       regulations made pursuant to the Safety Codes Act,
     - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash
       points but that may be flammable under certain conditions, and
     - the storage and handling of hydrocarbon-based chemicals resulting from or used during
       crude oil or natural gas exploration, production or transmission as mandated under the scope
       of EUB Guide 55.

Intent

1. To exempt dispensers from the minimum clearance requirement stated at the beginning of
   Clause 4.6.3.3.(1)(f) if certain conditions are met:
   - these openings are part of a building used exclusively by personnel that is essential to the fuel
     dispensing operations, and
   - ignition sources from electrical installation are eliminated in the building.

This is to limit the probability that ignition sources will ignite vapour from dispensing operations,
which could lead to a fire or explosion, which could lead to harm to persons.
A1. Location of fixed dispensers for Class I liquids at fuel-dispensing stations, with respect to openings in buildings that do not serve as shelter for operating personnel. This also applies to the minimum distance of ignition sources from tank vehicles [when located on a property covered by this Code] and their delivery equipment, during loading and unloading operations, as stated in Sentence 4.11.3.2.(1).

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

A2. This also applies to the minimum distance of ignition sources from tank vehicles [when located on a property covered by this Code] and their delivery equipment, during loading and unloading operations, as stated in Sentence 4.11.3.2.(1).

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Location, with respect to the minimum distance from any right-of-way and any property line, of fixed dispensers for Class I liquids at fuel-dispensing stations.

A2. This also applies to the minimum distance of ignition sources from tank vehicles [when located on a property covered by this Code] and their delivery equipment, during loading and unloading operations, as stated in Sentence 4.11.3.2.(1).

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the SafetyCodes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

A1. Location, with respect to the minimum distance from any right-of-way and any property line, of fixed dispensers for Class I liquids at fuel-dispensing stations.

A2. This also applies to the minimum distance of ignition sources from tank vehicles [when located on a property covered by this Code] and their delivery equipment, during loading and unloading operations, as stated in Sentence 4.11.3.2.(1).

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that the escape of liquid will spread to nearby properties or buildings, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to adjacent buildings or facilities.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.6.3.3.(1)-04
Attribution - functional statement/objective F01.F81-OS1.1

   except as stated in:
   - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
   - Sentence 4.1.1.1.(3), which applies to:
     - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
     - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
     - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
     - the storage of aerosol products covered under Subsection 3.2.5.,
     - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
     - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
     - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
     - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that the operation of the liquid dispenser will lead to the ignition of gases, [released from the nearby gas dispensers], which could lead to a fire or explosion, which could lead to harm to persons.

I2. To limit the probability that the operation of the gas dispensers will lead to the ignition of vapour [released from the nearby liquid dispensers], which could lead to a fire or explosion, which could lead to harm to persons.

I3. To limit the probability that misuse of, or confusion in the operation of, the liquid dispenser will lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
A1. Location, with respect to the minimum distance from any fixed source of ignition, of fixed dispensers for Class I liquids at fuel-dispensing stations.

A2. This also applies to the minimum distance of ignition sources from tank vehicles [when located on a property covered by this Code] and their delivery equipment, during loading and unloading operations, as stated in Sentence 4.11.3.2.(1).

  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on
    isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas
    regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas
    regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash
    points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the
    incidental storage and handling of hydrocarbon-based chemicals resulting from or used during
    crude oil or natural gas exploration, production or transmission as mandated under the scope
    of EUB Guide 55.

Intent
I1. To limit the probability that that liquid or vapour will escape inside a building, which could lead to
the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
### Application and intent of Division B provisions

## CodeText

### A1. Location of fixed dispensers for Class I liquids at fuel-dispensing stations, with respect to manhole or sewer openings.

- a) 3 m from any right-of-way and any property line,
- b) 3 m from any propane gas dispenser,
- c) 1.5 m from any natural gas dispenser,
- d) 6 m horizontally from any fixed source of ignition,
- e) 6 m horizontally from any liquefied petroleum gas cylinder or tank,
- f) 3 m from any building openings, other than those that serve as shelter for operating personnel and in which electrical installations conform to Article 4.1.4.1., and
- g) 6 m from any manhole or sewer opening (see Appendix A).

### Exception:

- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

## Application

A2. This also applies to the minimum distance of ignition sources from tank vehicles [when located on a property covered by this Code] and their delivery equipment, during loading and unloading operations, as stated in Sentence 4.11.3.2.(1).

### Exception:

1) Fixed dispensers for Class I liquids shall be installed outside buildings and not less than

- a) 3 m from any right-of-way and any property line,
- b) 3 m from any propane gas dispenser,
- c) 1.5 m from any natural gas dispenser,
- d) 6 m horizontally from any fixed source of ignition,
- e) 6 m horizontally from any liquefied petroleum gas cylinder or tank,
- f) 3 m from any building openings, other than those that serve as shelter for operating personnel and in which electrical installations conform to Article 4.1.4.1., and
- g) 6 m from any manhole or sewer opening (see Appendix A).

## Intent

1. To limit the probability that dispensers will release liquid in an uncontrolled manner, which could lead to the entry of liquid into manholes and sewer systems, which could lead to the spread of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

**Application**

A1. Location of fixed dispensers for Class I liquids at fuel-dispensing stations, with respect to the minimum distance from any liquified petroleum gas cylinder or tank.

A2. This also applies to the minimum distance of ignition sources from tank vehicles [when located on a property covered by this Code] and their delivery equipment, during loading and unloading operations, as stated in Sentence 4.11.3.2.(1).

**Exception:**

- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquified petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

**Intent**

I1. To limit the probability that the operation of the liquid dispenser will lead to the ignition of gases, [released from the nearby gas cylinders or tanks], which could lead to a fire or explosion, which could lead to harm to persons.

I2. To limit the probability that the operation of the gas dispensers will lead to the ignition of vapour [released from the nearby gas cylinders or tanks], which could lead to a fire or explosion, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.6.3.3.(2)-01
Attribution - functional statement/objective F01-OS1.1

CodeText

2) Fixed dispensers for Class II or IIIA liquids are permitted to be installed inside a building when:
   a) the building is not open to the public,
   b) the dispensers are located on the first storey,
   c) drainage is provided, and
   d) ventilation is provided in conformance with Subsection 4.1.7., and with the requirements for storage garages in Part 6 of Division B of the Alberta Building Code 2006.

Application

A1. Ventilation, provided in conformance with Subsection 4.1.7., and with the requirements for storage garages in Part 6 of Division B of the Alberta Building Code 2006, for fixed dispensers for Class II and IIIA liquids in a building used as a fuel-dispensing station.

A2. This also applies to the minimum distance of ignition sources from tank vehicles [when located on a property covered by this Code] and their delivery equipment, during loading and unloading operations, as stated in Sentence 4.11.3.2.(1)

Exception:

except as stated in
   - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
   - Sentence 4.1.1.1.(3), which applies to
     - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
     - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
     - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
     - the storage of aerosol products covered under Subsection 3.2.5.,
     - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
     - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
     - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
     - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that carbon monoxide and other flammable fumes [from vehicles approaching and leaving the dispensing area] will accumulate to levels that could pose a fire or explosion hazard, which could lead to the ignition of these fumes from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Ventilation, provided in conformance with Subsection 4.1.7. and with the requirements for storage garages in Part 6 of Division B of the Alberta Building Code 2006, for fixed dispensers for Class II and IIIA liquids in a building used as a fuel-dispensing station.

A2. This also applies to the minimum distance of ignition sources from tank vehicles [when located on a property covered by this Code] and their delivery equipment, during loading and unloading operations, as stated in Sentence 4.11.3.2.(1)

Exception:
except as stated in
- Sentence 4.1.1.1.2.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.3.(2), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that carbon monoxide and other toxic fumes [from vehicles approaching and leaving the dispensing area] will accumulate to levels that could pose a risk to human health from short-term exposure to such fumes, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Prohibition of public access to fixed dispensers for Class II and IIIA liquids in a building used as a fuel-dispensing stations.

A2. This also applies to the minimum distance of ignition sources from tank vehicles [when located on a property covered by this Code] and their delivery equipment, during loading and unloading operations, as stated in Sentence 4.11.3.2.(1).

Exception:
- except as stated in - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

A1. Prohibition of public access to fixed dispensers for Class II and IIIA liquids in a building used as a fuel-dispensing stations.

A2. This also applies to the minimum distance of ignition sources from tank vehicles [when located on a property covered by this Code] and their delivery equipment, during loading and unloading operations, as stated in Sentence 4.11.3.2.(1).

Exception:
- except as stated in - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that the public will misuse the dispensing equipment, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.

I2. To limit the probability that the public will misuse the dispensing equipment, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.6.3.3.(2)-04
Attribution - functional statement/objective F12.F01-OS1.1

Application

A1. Location on the first storey of fixed dispensers for Class II and IIIA liquids in a building used as a fuel-dispensing stations.

A2. This also applies to the minimum distance of ignition sources from tank vehicles [when located on a property covered by this Code] and their delivery equipment, during loading and unloading operations, as stated in Sentence 4.11.3.2.(1)

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that the location of the dispensers in a basement or on upper storeys will lead to delays or ineffectiveness in conducting firefighting operations in the event of a fire emergency, which could lead to the spread of the fire beyond the point of origin, which could lead to harm to persons.

I2. To limit the probability that location of dispensers in a basement will lead to accumulation of vapours in low areas of a building, which could lead to ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

A1. Ventilation, provided in conformance with Subsection 4.1.7. and with the requirements for storage garages in Part 6 of Division B of the Alberta Building Code 2006, for fixed dispensers for Class II and IIIA liquids in a building used as a fuel-dispensing stations.

A2. This also applies to the minimum distance of ignition sources from tank vehicles [when located on a property covered by this Code] and their delivery equipment, during loading and unloading operations, as stated in Sentence 4.11.3.2.(1)

Exception:

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Spill control measures, including drainage, for fixed dispensers for Class II and IIIA liquids in a building used as a fuel-dispensing stations.

A2. This also applies to the minimum distance of ignition sources from tank vehicles [when located on a property covered by this Code] and their delivery equipment, during loading and unloading operations, as stated in Sentence 4.11.3.2.(1).

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

Not applicable

Attribution - functional statement/objective

4.6.3.3.(2)-06

CodeReference (including record number) Not applicable

CodeText

2) Fixed dispensers for Class II or IIIA liquids are permitted to be installed inside a building when:

a) the building is not open to the public,

b) the dispensers are located on the first storey,

c) drainage is provided, and

d) ventilation is provided in conformance with Subsection 4.1.7. and with the requirements for storage garages in Part 6 of Division B of the Alberta Building Code 2006.

Exception:

except as stated in:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To direct Alberta Fire Code 2006 users to the drainage requirements in Article 4.1.6.2.

I2. To permit certain dispensers inside buildings, and to eliminate the option of using spill containment measures in Article 4.1.6.1. and Sentence 4.6.7.1.(1).
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Location of dispensers of Class I liquids within a building shall conform to Subsection 3.3.5. of Division B of the Alberta Building Code 2006.

A2. This also applies to remote pumps for Class I liquids inside buildings, as stated in Sentence 4.6.6.4.(2).

Exception:

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that liquid or vapour will escape, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.

I2. To expand the application of Subsection 3.3.5. of the Alberta Building Code 2006 [specifically Article 3.3.5.8.] to existing buildings [as opposed to just new buildings].
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Protection against collision damage for fixed dispensers for flammable liquids and combustible liquids at fuel-dispensing stations.

Exception:

- except as stated in - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that vehicle impact on, or mechanical damage to, piping will lead to failure of the piping, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Protection against collision damage for fixed dispensers for flammable liquids and combustible liquids at fuel-dispensing stations.

Exception:

- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

1) Fixed dispensers shall be protected against collision damage by
a) a concrete island not less than 100 mm high, or
b) posts or guardrails.

1) Dispensers at marine fuel-dispensing stations shall be in a location that will prevent watercraft or aircraft impact, or other physical damage.

Application
A1. Location of dispensers at marine fuel-dispensing stations.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incident storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent
I1. To limit the probability that dispensers will be physically damaged by operations involving watercraft or aircraft (upon approaching or leaving, during filling operations, etc.), which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Provision of devices to shut off power to fixed dispensers and pumps for flammable liquids or combustible liquids, at fuel-dispensing stations.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

A1. Provision of devices to shut off power to fixed dispensers and pumps for flammable liquids or combustible liquids, at fuel-dispensing stations.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that, in the event of an unwanted release, the escape of liquid will not be minimized, which could lead to the spread of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Location and shielding of devices to shut off power to fixed dispensers and pumps for flammable liquids or combustible liquids, at fuel-dispensing stations.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants;
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations";
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

1) A device to shut off power to all dispensers and pumps shall be provided at a remote location on the site of the fuel-dispensing station and shielded from any fire that might occur in the dispensing area.

Intent

I1. To limit the probability that the location of the shut-off device will be exposed to fire in the event of a fire near the dispensers, which could lead to delays in reaching and activating the shut-off device, which could lead to the escape of liquid not being minimized, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Provision of devices to shut off power to fixed dispensers and pumps for flammable liquids or combustible liquids, at fuel-dispensing stations.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
- the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

F44-OP1.1

Attribution - functional statement/objective

I1. To limit the probability that, in the event of an unwanted release, the escape of liquid will not be minimized, which could lead to the spread of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.

I2. To limit the probability that, in the event of a fire, the escape of liquid will not be minimized, which could lead to the spread of the fire, which could lead to damage to the building or facility.
Application and intent of Division B provisions

**Application**

A1. Location and shielding of devices to shut off power to fixed dispensers and pumps for flammable liquids or combustible liquids, at fuel-dispensing stations.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3) which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,

Intent

I1. To limit the probability of delays in reaching and activating the shut-off device in the event of an unwanted release of liquid, which could lead to the escape of liquid not being minimized, which could lead to the spread of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.

I2. To limit the probability of delays in reaching and activating the shut-off device in the event of a fire, which could lead to the escape of liquid not being minimized, which could lead to the spread of the fire, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeText

3) Reset capability for emergency shut-off switches required by Sentence (1) shall be restricted to manual operation.

CodeReference (including record number) 4.6.4.2.(3)-01

Attribution - functional statement/objective Not applicable

Application

A1. Manual reset of emergency shut-off switches for fixed dispensers and pumps for flammable liquids or combustible liquids, at
- self-service outlets where there is an attendant, and
- at card-activated and key-activated self-service outlets where there is no attendant (and the outlets are not open to the general public, as stated in Sentences 4.6.8.1.(2) and 4.6.8.4.(1)).

Exception:
- except as stated in
  - Sentences 4.6.8.2.(6) to (9), which apply to requirements pertaining to unattended self-service outlets,
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
    - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

11. To limit the probability of automatic resetting of an emergency shut-off switch, which would allow the pump or fixed dispenser to resume operation.

This could lead to release of liquid, which could lead to the spread of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to explosion or fire, which could lead to the spread of fire to nearby buildings and facilities, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Manual reset of emergency shut-off switches for fixed dispensers and pumps for flammable liquids or combustible liquids, at
- self-service outlets where there is an attendant, and
- at card-activated and key-activated self-service outlets where there is no attendant (and the outlets are not open to the general public, as stated in Sentences 4.6.8.1.(2) and 4.6.8.4.(1)).

Exception:
except as stated in

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability of automatic resetting of an emergency shut off switch, which would allow the pump or fixed dispenser to resume operation.

This could lead to release of liquid, which could lead to the spread of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Location and accessibility of shut-off valves in supply pipelines for flammable liquids and combustible liquids at marine fuel-dispensing stations.

Exception:

1) At marine fuel-dispensing stations, a readily accessible valve shall be provided in each pipeline at or within 7.5 m of the pier to shut off the supply from shore.

Application

F12-OH5

 Attribution - functional statement/objective

4.6.4.3.(1)-01

CodeReference (including record number)

CodeText

1) At marine fuel-dispensing stations, a readily accessible valve shall be provided in each pipeline at or within 7.5 m of the pier to shut off the supply from shore.

Application

A1. Location and accessibility of shut-off valves in supply pipelines for flammable liquids and combustible liquids at marine fuel-dispensing stations:

Exception:

except as stated in:

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants;
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations";
- appliances and their ancillary equipment within the scope of CAN/CSA-B139;
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects;
- the storage of aerosol products covered under Subsection 3.2.5.1.:
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act;
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act;
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

II. To limit the probability of delay in reaching and closing the valve in the event of an unwanted release of liquid, which could lead to the escape of liquid not being minimized, which could lead to the spread of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

1) At marine fuel-dispensing stations, a readily accessible valve shall be provided in each pipeline or within 7.5 m of the pier to shut off the supply from shore.

Application

A1. Location and accessibility of shut-off valves in supply pipelines for flammable liquids and combustible liquids at marine fuel-dispensing stations:

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability of delay in reaching and closing the valve in the event of an unwanted release of liquid, which could lead to the escape of liquid not being minimized, which could lead to the spread of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.

I2. To limit the probability of delay in reaching and closing the valve in the event of a fire, which could lead to the escape of liquid not being minimized, which could lead to the spread of the fire, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Application

A1. Location and accessibility of shut-off valves in supply pipelines for flammable liquids and combustible liquids at marine fuel-dispensing stations.

Exception:

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability of delay in reaching and closing the valve in the event of an unwanted release of liquid, which could lead to the escape of liquid not being minimized, which could lead to the spread of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.

I2. To limit the probability of delay in reaching and closing the valve in the event of a fire, which could lead to the escape of liquid not being minimized, which could lead to the spread of the fire, which could lead to harm to persons.
Applicaton and intent of Division B provisions

Alberta Fire Code 2006

A1. Delivery hose for the dispensing of flammable liquids and combustible liquids at fuel-dispensing stations.

Exception:

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

1) Delivery hose shall conform to CAN/ULC-S612, “Hose for Flammable and Combustible Liquids.”

Intent

1. To limit the probability that a hose will leak or fail, which could lead to the escape of liquid, which could lead to harm to the public.
1) Delivery hose shall conform to CAN/ULC-S612, “Hose for Flammable and Combustible Liquids.”

Application
A1. Delivery hose for the dispensing of flammable liquids and combustible liquids at fuel-dispensing stations.

Exception:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent
I1. To limit the probability that a hose will leak or fail, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Application

A1. Delivery hose for the dispensing of flammable liquids and combustible liquids at fuel-dispensing stations.

Exception:

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

1. To limit the probability that a hose will leak or fail, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.

2. To limit the probability that the use of the hose will lead to static electricity build-up or sparks, which could lead to the ignition of vapour from the liquid transfer and dispensing operation, which could lead to harm to persons.
Application and intent of Division B provisions

Application

A1. Maximum length of hose through which flammable liquids or combustible liquids are dispensed at a fuel-dispensing station shall be restricted to a maximum extended length of 4.5 m.

Exception:

- except as stated in Sentence 4.6.5.1.(3), which applies when a retracting mechanism is provided,
- Sentence 4.6.5.1.(4), which applies to marine fuel-dispensing stations or to card activated or key activated dispensers,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability of an unwanted escape of liquid from a hose, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Maximum length of hose through which flammable liquids or combustible liquids are dispensed at a fuel-dispensing station shall be restricted to a maximum extended length of 4.5 m.

Exception:

- Sentence 4.6.5.1.(3), which applies when a retracting mechanism is provided,
- Sentence 4.6.5.1.(4), which applies to marine fuel-dispensing stations or to card activated or key activated dispensers,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I. To limit the probability of an unwanted escape of liquid from a hose, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
A1. Maximum length of hose through which flammable liquids or combustible liquids are dispensed at fuel-dispensing stations.

Exception:
except as stated in
- Sentence 4.6.5.1.(3), which applies when a retracting mechanism is provided,
- Sentence 4.6.5.1.(4), which applies to marine fuel-dispensing stations or to card activated or key activated dispensers,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Maximum extended length of hose through which flammable liquids or combustible liquids are dispensed at fuel-dispensing stations where a retracting mechanism is used.

Exception:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

4) At marine fuel-dispensing stations or at card- or key-activated dispensers, the length of extended hose is permitted to exceed the values in Sentences (2) and (3).

Application

A1. Maximum length of hose through which flammable liquids or combustible liquids are dispensed at:
- marine fuel-dispensing stations, or
- card activated or key activated dispensers provided in Article 4.6.8.4. to be used at:
- unattended self-service outlets, and
- fuel-dispensing stations not open to the general public.

Exception:
except as stated in:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to:
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To exempt hoses from the application of Sentence 4.6.5.1.(2), which would otherwise restrict the hose length, on the basis that this situation is necessary due to the type of vehicle being refuelled.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Conformance with CAN/ULC-S620 for hose nozzle valves through which a Class I or II liquid is dispensed by a motorized dispenser into a vehicle tank at fuel-dispensing stations.

Exception:

- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids or appliances and their ancillary equipment within the scope of CAN/CSA-B139, the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5., liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

2) Except as provided in Sentences (3) to (5), a hose nozzle valve shall be constructed so that the valve
a) can be kept open only by the continuous application of manual pressure, or
b) is equipped with a hold-open device that is an integral part of the nozzle and that will
i) allow automatic dispensing,
ii) automatically shut off when the vehicle tank is filled, and
iii) shut off if the nozzle is dropped or falls from the fill pipe.

Application

A1. Method of operation [with respect to opening and shut-off] of hose nozzle valves through which flammable liquids or combustible liquids are dispensed at fuel-dispensing stations.

Exception:
except as stated in
- Sentence 4.6.5.2.(3), which applies to marine fuel-dispensing stations,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of the code of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that inadequate control of dispensing operations will lead to an unwanted escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

H1. To limit the probability that vehicle tank overfill or dropping of the nozzle from the fill pipe will lead to an unwanted escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

3) A hose nozzle valve at a marine fuel-dispensing station shall be of the type without a hold-open device, in conformance with Clause (2)(a).

Exception:

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To exempt marine fuel dispensing stations from the application of Clause 4.6.5.2.(2)(b), which would otherwise require automatic hose nozzle valves, if certain conditions are met [dispensing operations must be continuously attended and hose nozzle valves are manually operated], on the basis that marine fuel dispensing stations pose a higher risk, which could lead to harm to the public [water contamination].

The conditions [that are to be met] are to limit the probability that inadequate control of dispensing operations will lead to an unwanted escape of liquid, which could lead to harm to the public.

I2. To state the application of Clause 4.6.5.2.(2)(a).
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Method of operation [with respect to dispensing and shut-off] of hose nozzle valves through which flammable liquids or combustible liquids are dispensed at marine fuel-dispensing stations.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- Subsection 3.2.5.,
- appliances and their ancillary equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Method of operation [with respect to dispensing and shut-off] of hose nozzle valves through which flammable liquids or combustible liquids are dispensed at marine fuel-dispensing stations.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To exempt marine fuel dispensing stations from the application of Clause 4.6.5.2.(2)(b), which would otherwise require automatic hose nozzle valves, if certain conditions are met [dispensing operations must be continuously attended and hose nozzle valves are manually operated], on the basis that marine fuel dispensing stations pose a higher fire risk.

The conditions [that are to be met] are to limit the probability that inadequate control of dispensing operations will lead to an unwanted escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.

I2. To state the application of Clause 4.6.5.2.(2)(a).
Application and intent of Division B provisions

Application

A1. Design, construction, operation and installation of breakaway couplings where hose nozzle valves with hold-open devices are used for dispensing of flammable liquids or combustible liquids at a fuel-dispensing station [where dispensing is expected to be done by untrained customers posing a higher risk of driving away while the dispensing nozzle is still in the vehicle tank fill opening].

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

11. To limit the probability that driving away with a vehicle while the dispensing nozzle is still in the vehicle tank fill opening will lead to an unwanted escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Application
A1. Design, construction, operation and installation of breakaway couplings where hose nozzle valves with hold-open devices are used for dispensing of flammable liquids or combustible liquids at a fuel-dispensing station [where dispensing is expected to be done by untrained customers posing a higher risk of driving away while the dispensing nozzle is still in the vehicle tank fill opening].

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent
I1. To limit the probability that driving away with a vehicle while the dispensing nozzle is still in the vehicle tank fill opening will lead to an unwanted escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Application and intent of Division B provisions

Application

A1. Design, construction, operation and installation of breakaway couplings where hose nozzle valves with hold-open devices are used for dispensing of flammable liquids or combustible liquids at a fuel-dispensing station (where dispensing is expected to be done by untrained customers posing a higher risk of driving away while the dispensing nozzle is still in the vehicle tank fill opening).

Exception:

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that driving away with a vehicle while the dispensing nozzle is still in the vehicle tank fill opening will lead to an unwanted escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
When the flow of liquid can be stopped other than by the hose nozzle valve, a hose nozzle valve with a hold-open device is permitted to be used only if it is provided with a device that will automatically close the hose nozzle valve upon a drop of pressure in the dispensing hose.

Exception:
except as stated in:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

To limit the probability that the hose nozzle valve will not shut off when the flow of liquid is stopped, which could lead to the hose nozzle valve being in the open position when dispensing operations are resumed at the dispenser, which could lead to an unwanted escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Application of Division B provisions

A1. Hose nozzle valves equipped with hold-open devices used for dispensing of flammable liquids or combustible liquids at fuel-dispensing stations, when the flow of liquid can be stopped other than by the hose nozzle valve.

Exception:
except as stated in:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

11. To limit the probability that the hose nozzle valve will not shut off when the flow of liquid is stopped, which could lead to the hose nozzle valve being in the open position when dispensing operations are resumed at the dispenser, which could lead to an unwanted escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

A1. Emergency shut-off valves in the supply line of dispensers used for dispensing flammable liquids or combustible liquids at fuel-dispensing stations where the liquids are transferred from bulk storage to individual or multiple dispensers by pumps located elsewhere than at the dispensers.

A2. This also applies to dispensers supplied from aboveground storage tanks at bulk plants, as stated in Clause 4.7.3.2.(2)(b).

Exception: except as stated in
  - Sentence 4.1.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139.
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

I1. To limit the probability that vehicle impact on, or mechanical damage to, the valve mounting area will lead to failure of the valve and piping, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.

I2. To limit the probability that vehicle impact on, or mechanical damage to, the dispenser will lead to failure of the dispenser piping, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.

I3. To limit the probability that fire exposure on the dispenser and associated piping will lead to failure of the dispenser piping, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.

Intent

F81,F04,F43-OP1.1

Attribution - functional statement/objective

1) An emergency valve conforming to ULC-S651, “Emergency Valves for Flammable and Combustible Liquids,” shall be installed in the supply line so that the shear point of the valve is at a level not higher than the base of the dispenser nor more than 25 mm below it.

II1. To limit the probability that vehicle impact on, or mechanical damage to, the valve mounting area would lead to failure of the valve and piping, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.

II2. To limit the probability that vehicle impact on, or mechanical damage to, the dispenser would lead to failure of the dispenser piping, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.

II3. To limit the probability that fire exposure on the dispenser and associated piping would lead to failure of the dispenser piping, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.

II4. To limit the probability that vehicle impact on, or mechanical damage to, the dispenser piping would lead to failure of the dispenser piping, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.

  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

F82-OP1.1

Attribution - functional statement/objective

2) The emergency valve required in Sentence (1) shall be maintained in operating condition and serviced at intervals not greater than 12 months.

CodeText

I1. To limit the probability that the valve will not operate properly when subjected to a vehicle or physical impact, which could lead to failure of the valve or associated piping, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.

II2. To limit the probability that the valve will not operate properly when subjected to a fire exposure, which could lead to failure of the valve or associated piping, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.6.6.3.(2)-03
Attribution - functional statement/objective F82-OS1.1

Application

A1. Maintenance and service frequency of emergency shut-off valves in the supply line of dispensers used for dispensing flammable liquids or combustible liquids at fuel-dispensing stations where the liquids are transferred from bulk storage to individual or multiple dispensers by pumps located elsewhere than at the dispensers.

Exception:
- except as stated in - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that the valve will not operate properly when subjected to a vehicle or physical impact, which could lead to failure of the valve or associated piping, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.

I2. To limit the probability that the valve will not operate properly when subjected to a fire exposure, which could lead to failure of the valve or associated piping, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Location, with respect to property lines, of outdoor aboveground pumps in systems for dispensing flammable liquids or combustible liquids where the liquids are transferred from bulk storage to individual or multiple dispensers by pumps located elsewhere than at the dispensers, at fuel-dispensing stations.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

F01-OP3.1

1) Pumps installed aboveground and outside buildings shall be located not less than
a) 3 m from any property line, and
b) 1.5 m from any building opening.

Intent

I1. To limit the probability that an ignition source from adjacent buildings or facilities will ignite vapour from the pump, which could lead to a fire or explosion, which could lead to damage to the building or facility.

I2. To limit the probability that vapour from the pump will accumulate in adjacent buildings or facilities, which could lead to ignition of the vapour from an ignition source on adjacent buildings or facilities, which could lead to a fire or explosion, which could lead to damage to adjacent buildings or facilities.
A1. Location, with respect to property lines, of outdoor aboveground pumps in systems for dispensing flammable liquids or combustible liquids where the liquids are transferred from bulk storage to individual or multiple dispensers by pumps located elsewhere than at the dispensers, at fuel-dispensing stations.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
A1. Location, with respect to any building opening, of outdoor aboveground pumps in systems for dispensing flammable liquids or combustible liquids where the liquids are transferred from bulk storage to individual or multiple dispensers by pumps located elsewhere than at the dispensers, at fuel-dispensing stations.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

I1. To limit the probability that vapour will enter adjacent buildings or facilities through openings in the building, which could lead to the accumulation of vapour inside the building, which could lead to the ignition of the vapour from a nearby ignition source, which could lead to damage to adjacent buildings or facilities.
A1. Location, with respect to any building opening, of outdoor aboveground pumps in systems for dispensing flammable liquids or combustible liquids where the liquids are transferred from bulk storage to individual or multiple dispensers by pumps located elsewhere than at the dispensers, at fuel-dispensing stations.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent
I1. To limit the probability that vapour will enter a building through openings in the building, which could lead to the accumulation of vapour inside the building, which could lead to the ignition of the vapour from a nearby ignition source, which could lead to harm to persons.

2) When an outside pump location is impractical, pumps are permitted to be installed inside buildings or in pits as provided in Article 4.6.2.6.

Application

A1. Location of pumps inside buildings or pits in systems for dispensing flammable liquids or combustible liquids where such liquids are transferred from bulk storage to individual or multiple dispensers by pumps located elsewhere than at the dispensers, at fuel-dispensing stations.

Exception:

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To expand the application of Article 4.6.2.6.

1) Except as permitted in Sentence (2), tanks and pumps not integral with the dispenser at marine fuel-dispensing stations shall be located on the shore or on a pier of the solid-fill type.

Application

A1. Location of tanks and pumps not integral with dispensers used in systems for dispensing flammable liquids or combustible liquids where such liquids are transferred from bulk storage to individual or multiple dispensers by pumps located elsewhere than at the dispensers, at marine fuel-dispensing stations.

Exception:
except as stated in
- Sentence 4.6.6.5.(2), where there would be excessive lengths of supply lines,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that excessive movement, vibration or watercraft impact on, or mechanical damage to, the tanks or pumps will lead to failure of the tanks or pumps and associated piping, which could lead to the escape of liquid, which could lead to harm to the public.

I2. To limit the probability of delays or ineffectiveness in conducting spill control or emergency response operations, which could lead to the escape and spread of liquid, which could lead to harm to the public.
A1. Location of tanks and pumps not integral with dispensers used in systems for dispensing flammable liquids or combustible liquids where such liquids are transferred from bulk storage to individual or multiple dispensers by pumps located elsewhere than at the dispensers, at marine fuel-dispensing stations.

Exception: except as stated in
- Sentence 4.6.6.5.(2), where there would be excessive lengths of supply lines,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,

Attribution - functional statement/objective F81,F12,F20,F22-OS1.1
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

Application

A1. Installation of storage tanks on piers at marine fuel-dispensing stations where

- the tanks are used in systems for dispensing flammable liquids or combustible liquids,
- shore locations would result in excessively long supply lines to the dispenser,
- the applicable portions of Subsection 4.3.7. relating to spacing, secondary containment and piping are complied with,
- the quantity stored does not exceed 5 000 L aggregate capacity, and
- the liquids are transferred from bulk storage to individual or multiple dispensers by pumps located elsewhere than at the dispensers.

Exception:
except as stated in

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To exempt pier storage tanks from the application of Sentence 4.6.6.5.(1), which would otherwise require the tanks to be located on the shore or a solid-fill type pier, if certain measures are taken.

These measures are to limit the probability that escaped liquid from the tanks will spread beyond the tank area, which could lead to harm to the public.
Application and intent of Division B provisions

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To exempt pier storage tanks from the application of Sentence 4.6.6.5.(1), which would otherwise require the tanks to be located on the shore or a solid-fill type pier, if certain measures are taken.

These measures are to limit the probability that the escape of liquid from the tanks
- will spread beyond the tank area, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility, and
- will be in such large quantities that it cannot be controlled by emergency responders, which could lead to the spread of fire, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Installation of storage tanks on piers at marine fuel-dispensing stations where:
- the tanks are used in systems for dispensing flammable liquids or combustible liquids,
- shore locations would result in excessively long supply lines to the dispenser,
- the applicable portions of Subsection 4.3.7. relating to spacing, secondary containment and piping are complied with,
- the quantity stored does not exceed 5 000 L aggregate capacity, and
- the liquids are transferred from bulk storage to individual or multiple dispensers by pumps located elsewhere than at the dispensers.

Exception:

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
- the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To exempt pier storage tanks from the application of Sentence 4.6.6.5.(1), which would otherwise require the tanks to be located on the shore or a solid-fill type pier, if certain measures are taken.

These measures are to limit the probability that the escape of liquid from the tanks
- will spread beyond the tank area, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons, and
- will be in such large quantities that it cannot be controlled by emergency responders, which could lead to the spread of fire, which could lead to harm to persons.
3) No storage tank at a marine fuel-dispensing station shall be located closer than 4.5 m horizontally from the normal annual high-water mark.

Application

A1. Location, with respect to the normal annual high-water mark, of storage tanks used in systems for dispensing flammable liquids or combustible liquids where the liquids are transferred from bulk storage to individual or multiple dispensers by pumps located elsewhere than at the dispensers, at marine fuel-dispensing stations.

Exception:

- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

11. To limit the probability that water or ice movement will lead to the failure and leakage of the tank or associated piping, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

11. To limit the probability that water or ice movement will lead to the failure and leakage of the tank or associated piping, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Aboveground storage tanks located on shore and supplying marine fuel-dispensing stations, where
- the tanks are used in systems for dispensing flammable liquids or combustible liquids,
- the liquids are transferred from bulk storage to individual or multiple dispensers by pumps located elsewhere than at the dispensers, and
- rock or a high water table make underground tanks impracticable.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

11. To clarify that storage tanks are permitted to be located aboveground if certain conditions make it impracticable for the tanks to be located underground.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Provision and location of automatically operated valves designed to open only when the dispenser is being operated and to prevent gravity draining of the tank in the event of a rupture of the supply line to the dispenser, shall be provided at the storage tank outlet, positioned adjacent to and outside the valve specified in Article 4.3.6.1.

Application

A1. Provision and location of automatically operated valves designed to open only when the dispenser is being operated and to prevent gravity draining of the tank in the event of a rupture of the supply line to the dispenser, at marine fuel-dispensing stations, where
- the valves are used in systems for dispensing flammable liquids or combustible liquids,
- the liquids are transferred from bulk storage to individual or multiple dispensers by pumps located elsewhere than at the dispensers, and
- storage tanks are elevated above the dispenser.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

CodeText

I1. To limit the probability that damage or rupture of the supply line to the dispenser will lead to gravity draining of the tank, which could lead to the escape and spread of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Provision and location of automatically operated valves designed to open only when the dispenser is being operated and to prevent gravity draining of the tank in the event of a rupture of the supply line to the dispenser, shall be provided at the storage tank outlet, positioned adjacent to and outside the valve specified in Article 4.3.6.1.

Application

5) Where storage tanks at a marine fuel-dispensing station are elevated above the dispenser, an automatically operated valve that is designed to open only when the dispenser is being operated, so as to prevent gravity draining of the tank in the event of a rupture of the supply line to the dispenser, shall be provided at the storage tank outlet, positioned adjacent to and outside the valve.

Exception:

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- the storage of liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that damage or rupture of the supply line to the dispenser will lead to gravity draining of the tank, which could lead to the escape and spread of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.6.6.5.(5)-03

A1. Provision and location of automatically operated valves designed to open only when the dispenser is being operated and to prevent gravity draining of the tank in the event of a rupture of the supply line to the dispenser, shall be provided at the storage tank outlet, positioned adjacent to and outside the valve specified in Article 4.3.6.1.

Application

- the valves are used in systems for dispensing flammable liquids or combustible liquids;
- the liquids are transferred from bulk storage to individual or multiple dispensers by pumps located elsewhere than at the dispensers, and
- storage tanks are elevated above the dispenser.

Exception:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that damage or rupture of the supply line to the dispenser will lead to gravity draining of the tank, which could lead to the escape and spread of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
6) Piping between storage tanks located on shore and dispensers at a marine fuel-dispensing station shall conform to Section 4.5., except that where dispensing is from a floating structure, it is permitted to use suitable lengths of flexible hose designed in conformance with good engineering practice between the piping on shore and the piping on the floating structure. (See A-4.8.8.1.(1)(a) in Appendix A.)

Application

A1. Flexible hose used between storage tanks located on shore and dispensers that are located on a floating structure, at marine fuel-dispensing stations, where
- the piping is used in systems for dispensing flammable liquids or combustible liquids, and
- the liquids are transferred from bulk storage to individual or multiple dispensers by pumps located elsewhere than at the dispensers.

Exception:

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To exempt certain situations from the application of the first part of this Sentence [Sentence 4.6.6.5.(6)], which would otherwise require piping to conform to Section 4.5., and permit alternate means of transfer [flexible hose], if certain measures are taken [suitable lengths of flexible hose designed in conformance with good engineering practice].

These measures are to limit the probability of the escape of liquid [e.g. hose rupture], which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Flexible hose used between storage tanks located on shore and dispensers that are located on a floating structure, at marine fuel-dispensing stations, where
- the piping is used in systems for dispensing flammable liquids or combustible liquids, and
- the liquids are transferred from bulk storage to individual or multiple dispensers by pumps located elsewhere than at the dispensers.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

6) Piping between storage tanks located on shore and dispensers at a marine fuel-dispensing station shall conform to Section 4.5., except where dispensing is from a floating structure, it is permitted to use suitable lengths of flexible hose designed in conformance with good engineering practice between the piping on shore and the piping on the floating structure. (See A-4.6.8.1.(1)(a) in Appendix A.)

CodeText

I1. To exempt certain situations from the application of the first part of this Sentence [Sentence 4.6.6.5.(6)], which would otherwise require piping to conform to Section 4.5., and permit alternative means of transfer [flexible hose], if certain measures are taken [suitable lengths of flexible hose designed in conformance with good engineering practice]. These measures are to limit the probability of
- a fire or explosion hazard [e.g. static charges], which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility, and
- the escape of liquid [e.g. hose rupture], which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.

(See A-4.8.8.1.(1)(a) in Appendix A.)

Application

A1. Piping between storage tanks located on shore and dispensers at a marine fuel-dispensing station, where
- the piping is used in systems for dispensing flammable liquids or combustible liquids, and
- the liquids are transferred from bulk storage to individual or multiple dispensers by pumps located elsewhere than at the dispensers.

Exception:
- except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations'',
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To expand the application of Section 4.5., which would otherwise not apply at fuel dispensing stations [as stated in Clause 4.5.1.1.(2)(c)].
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Design – with respect to controlling spills of 1000 L or more – of areas where flammable liquids or combustible liquids are dispensed, at fuel-dispensing stations.

Exception:

- except as stated in Clause 4.6.3.3.(2)(c), which applies to drainage where dispensers of Class II or IIIA liquids are installed inside buildings, and
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability of the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Application

A1. Design – with respect to controlling spills of 1000 L or more – of areas where flammable liquids or combustible liquids are dispensed, at fuel-dispensing stations.

Exception:
except as stated in
- Clause 4.6.3.3.(2)(c), which applies to drainage where dispensers of Class II or IIIA liquids are installed inside buildings, and
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that the escape of liquid will lead to a fire or to the spread of fire outside the spill area, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Application

A1. Design – with respect to controlling spills of 1000 L or more – of areas where flammable liquids or combustible liquids are dispensed, at fuel-dispensing stations.

Exception:

- except as stated in Clause 4.6.3.3.(2)(c), which applies to drainage where dispensers of Class II or IIIA liquids are installed inside buildings, and
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that the escape of liquid will lead to a fire or to the spread of fire outside the spill area, which could lead to harm to persons, including emergency responders, in other parts of the building, adjacent buildings or adjacent outdoor areas.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.6.7.1.(1)-04
Attribution - functional statement/objective Not applicable

CodeText
1) Areas where flammable liquids or combustible liquids are dispensed shall be designed to
a) be able to handle accidental spillage in conformance with Subsection 4.1.6., and
b) control a spill of not less than 1 000 L.

Exception:
- except as stated in
  - Clause 4.6.3.3.(2)(c), which applies to drainage where dispensers of Class II or IIIA liquids are
    installed inside buildings, and
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the "Transportation of
      Dangerous Goods Regulations",
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on
      isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas
      regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas
      regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash
      points but that may be flammable under certain conditions, and
    - the storage and handling of raw production flammable liquids or combustible liquids and the
      incidental storage and handling of hydrocarbon-based chemicals resulting from or used during
      crude oil or natural gas exploration, production or transmission as mandated under the scope
      of EUB Guide 55.

Application
A1. Design – with respect to spill control – of areas where flammable liquids or combustible liquids
are dispensed, at fuel-dispensing stations.

Intent
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

Application

A1. Temporary storage in a storage tank or closed container of contaminated absorbent materials used during the cleanup of flammable liquid or combustible liquid spills shall be stored in a storage tank or closed container conforming to this Part until they are removed from the premises.

Exception:

except as stated in

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage and handling of liquefied hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that the improper or careless disposal of absorbent materials contaminated with flammable liquids or combustible liquids could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

1) Except as permitted by Sentence (2) and Sentences 4.6.8.2.(6) to (9) for unattended self-service outlets, every fuel-dispensing station shall have at least one attendant referred to in Article 4.6.8.5. on duty when the station is open for business.

Exception:
- Sentence 4.6.8.1.(2), which applies to unattended fuel-dispensing stations [self-service outlets] which do not serve the general public,
- Sentences 4.6.8.2.(6) to (9), which apply to requirements pertaining to unattended self-service outlets,
- Sentence 4.6.8.3.(1), which applies to attended self-service outlets where there is at least one qualified attendant on duty for every 12 hoses, which can be operated simultaneously while the outlet is open to the general public,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that the duties described in Article 4.6.8.5. will not be fulfilled and the fuel dispensing procedures described in Article 4.6.8.6. will not be followed, which could lead to
- escape and spread of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons, and
- a source of ignition, which could lead to the ignition of vapour from dispensing operations, which could lead to harm to persons.

I2. To state the application of the duties of attendants described in Article 4.6.8.5. and fuel dispensing procedures described in Article 4.6.8.6.
Application and intent of Division B provisions

Alberta Fire Code 2006

4.6.8.1.(1)-02

Exception:
- Sentence 4.6.8.1.(2), which applies to unattended fuel-dispensing stations [self-service outlets] which do not serve the general public,
- Sentences 4.6.8.2.(6) to (9), which apply to requirements pertaining to unattended self-service outlets,

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

I1. To limit the probability that the duties described in Article 4.6.8.5. will not be fulfilled and the fuel dispensing procedures described in Article 4.6.8.6. will not be followed, which could lead to escape and spread of liquid, which could lead to harm to the public.

I2. To state the application of the duties of attendants described in Article 4.6.8.5. and fuel dispensing procedures described in Article 4.6.8.6.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

Exception: except as stated in
- Sentence 4.6.8.1.(2), which applies to unattended fuel-dispensing stations [self-service outlets] which do not serve the general public,
- Sentences 4.6.8.2.(6) to (9), which apply to requirements pertaining to unattended self-service outlets,
- Sentence 4.6.8.3.(1), which applies to attended self-service outlets where there is at least one qualified attendant on duty for every 12 hoses, which can be operated simultaneously while the outlet is open to the general public,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that the duties described in Article 4.6.8.5. will not be fulfilled and the fuel dispensing procedures described in Article 4.6.8.6. will not be followed, which could lead to
- escape and spread of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility, and
- a source of ignition, which could lead to the ignition of vapour from dispensing operations, which could lead to damage to the building or facility.

I2. To state the application of the duties of attendants described in Article 4.6.8.5. and fuel dispensing procedures described in Article 4.6.8.6.
Application and intent of Division B provisions

Alberta Fire Code 2006

Exception:
- except as stated in Sentence 4.6.8.1.(2), which applies to unattended fuel-dispensing stations [self-service outlets] which do not serve the general public,
- Sentences 4.6.8.2.(6) to (9), which apply to requirements pertaining to unattended self-service outlets,
- Sentence 4.6.8.3.(1), which applies to attended self-service outlets where there is at least one qualified attendant on duty for every 12 hoses, which can be operated simultaneously while the outlet is open to the general public,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- the storage of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,

Exception:
- Sentence 4.6.8.1.(2), which applies to unattended fuel-dispensing stations [self-service outlets] which do not serve the general public,
- Sentences 4.6.8.2.(6) to (9), which apply to requirements pertaining to unattended self-service outlets,
- Sentence 4.6.8.3.(1), which applies to attended self-service outlets where there is at least one qualified attendant on duty for every 12 hoses, which can be operated simultaneously while the outlet is open to the general public,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

I1. To exempt certain fuel dispensing stations from the application of Sentence 4.6.8.1.(1), which would otherwise require attendants, and permit unattended fuel dispensing stations [self-service outlets], if certain conditions are met [the stations do not serve the general public and the fuel dispensing is done by authorized customers, i.e. having received proper training or instructions in safe dispensing procedures].

These conditions are to limit the probability of
- the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons, and
- a fire or explosion hazard, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.

**Exception:**
- as stated in
  - Sentence 4.6.8.1.(2), which applies to unattended fuel-dispensing stations [self-service outlets] which do not serve the general public;
  - Sentences 4.6.8.2.(6) to (9), which apply to requirements pertaining to unattended self-service outlets;
  - Sentence 4.6.8.3.(1), which applies to attended self-service outlets where there is at least one qualified attendant on duty for every 12 hoses, which can be operated simultaneously while the outlet is open to the general public;
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
    - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

**CodeText**
2) Fuel-dispensing stations that do not serve the general public do not require an attendant.

**Application**
To exempt certain fuel dispensing stations from the application of Sentence 4.6.8.1.(1), which would otherwise require attendants, and permit unattended fuel dispensing stations [self-service outlets], if certain conditions are met [the stations do not serve the general public and the fuel dispensing is done by authorized customers, i.e. having received proper training or instructions in safe dispensing procedures].

These conditions are to limit the probability of the escape of liquid, which could lead to harm to the public.

Application and intent of Division B provisions

CodeReference (including record number) 4.6.8.1.-(3)-01
Attribution - functional statement/objective F43-0H5

Application

A1. Duty of attendants dispensing Class I and II liquids into the fuel tanks of motor vehicles, watercraft or aircraft, or into containers.

Exception:

3) Except as permitted at self-service outlets, a qualified attendant shall be in constant control of the dispensing of Class I and II liquids into the fuel tanks of motor vehicles, watercraft or aircraft, or into containers.

Application

A1. Duty of attendants dispensing Class I and II liquids into the fuel tanks of motor vehicles, watercraft, or into containers [in conformance with Articles 4.6.8.5. and 4.6.8.6.], at fuel-dispensing stations.

Exception: except as stated in

- Sentence 4.6.8.1.(2), which applies to unattended fuel-dispensing stations [self-service outlets] which do not serve the general public,
- Sentences 4.6.8.2.(6) to (9), which apply to requirements pertaining to unattended self-service outlets,
- Sentence 4.6.8.3.(1), which applies to attended self-service outlets where there is at least one qualified attendant on duty for every 12 hoses, which can be operated simultaneously while the outlet is open to the general public,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
- the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

Application

A1. Location of attendant control consoles at self-service outlets that serve the general public, where
- the attendant is to fulfill the duties as stated in Article 4.6.8.5., and
- there
- is an emergency shut-off switch as stated in Sentence 4.6.4.2.(1)
- are controls to regulate the operation of each dispenser, as stated in Sentence 4.6.8.2.(3), and
- is a two-way communication system, as stated in Sentence 4.6.8.2.(4).

Exception:

- except as stated in Sentence 4.6.8.2.(5), which applies where the attendant is permitted not to be continuously on duty at the control console if specified conditions are met, and
- Sentences 4.6.8.2.(6) to (9), which apply to requirements pertaining to unattended self-service outlets,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that attendants will not be able to see and identify risks, improper dispensing operations or any equipment failures, which could lead to inappropriate action by the attendants, which could lead to the escape or spread of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Location of attendant control consoles at self-service outlets that serve the general public, where
- the attendant is to fulfill the duties as stated in Article 4.6.8.5., and
- there
- is an emergency shut-off switch as stated in Sentence 4.6.4.2.(1)
- are controls to regulate the operation of each dispenser, as stated in Sentence 4.6.8.2.(3), and
- is a two-way communication system, as stated in Sentence 4.6.8.2.(4).

Exception:
except as stated in
- Sentence 4.6.8.2.(5), which applies where the attendant is permitted not to be continuously on duty at the control console if specified conditions are met, and
- Sentences 4.6.8.2.(6) to (9), which apply to requirements pertaining to unattended self-service outlets,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Attribution - functional statement/objective

4.6.8.2.(2)-02

CodeReference (including record number)

2) A control console shall be provided at self-service outlets within 25 m of all dispensers so that the attendant has an unobstructed view of all units at the same time.

Application

A1. Location of attendant control consoles at self-service outlets that serve the general public, where
- the attendant is to fulfill the duties as stated in Article 4.6.8.5., and
- there
- is an emergency shut-off switch as stated in Sentence 4.6.4.2.(1)
- are controls to regulate the operation of each dispenser, as stated in Sentence 4.6.8.2.(3), and
- is a two-way communication system, as stated in Sentence 4.6.8.2.(4).

Exception:
except as stated in
- Sentence 4.6.8.2.(5), which applies where the attendant is permitted not to be continuously on duty at the control console if specified conditions are met, and
- Sentences 4.6.8.2.(6) to (9), which apply to requirements pertaining to unattended self-service outlets,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that attendants will not be able to see and identify risks, improper dispensing operations or any equipment failures, which could lead to inappropriate action by the attendants, which could lead to
- the escape or spread of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility, and
- a fire or explosion hazard, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Application
A1. Location of attendant control consoles at self-service outlets that serve the general public, where:
- the attendant is to fulfill the duties as stated in Article 4.6.8.5., and
- there
  - is an emergency shut-off switch as stated in Sentence 4.6.4.2.(1)
  - are controls to regulate the operation of each dispenser, as stated in Sentence 4.6.8.2.(3), and
  - is a two-way communication system, as stated in Sentence 4.6.8.2.(4).

Exception:
except as stated in:
- Sentence 4.6.8.2.(5), which applies where the attendant is permitted not to be continuously on duty at the control console if specified conditions are met, and
- Sentences 4.6.8.2.(6) to (9), which apply to requirements pertaining to unattended self-service outlets,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent
I1. To limit the probability that attendants will not be able to see and identify risks, improper dispensing operations or any equipment failures, which could lead to inappropriate action by the attendants, which could lead to:
- the escape or spread of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons, and
- a fire or explosion hazard, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
A1. Location of attendant control consoles at self-service outlets that serve the general public, where:
- the attendant is to fulfill the duties as stated in Article 4.6.8.5., and
- there is an emergency shut-off switch as stated in Sentence 4.6.4.2.(1)
- are controls to regulate the operation of each dispenser, as stated in Sentence 4.6.8.2.(3), and
- is a two-way communication system, as stated in Sentence 4.6.8.2.(4).

Exception:
except as stated in:
- Sentences 4.6.8.2.(6) to (9), which apply to requirements pertaining to unattended self-service outlets,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”.
- appliances and their ancillary equipment within the scope of the code
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent
I1. To limit the probability that the escape of liquid will not be minimized in the event of an unwanted release, which could lead to the spread of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

Location of attendant control consoles at self-service outlets that serve the general public, where
- the attendant is to fulfill the duties as stated in Article 4.6.8.5., and
- there
- is an emergency shut-off switch as stated in Sentence 4.6.4.2.(1)
- are controls to regulate the operation of each dispenser, as stated in Sentence 4.6.8.2.(3), and
- is a two-way communication system, as stated in Sentence 4.6.8.2.(4).

Exception:
except as stated in
- Sentences 4.6.8.2.(6) to (9), which apply to requirements pertaining to unattended self-service outlets,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

F44-OP1.1,OP1.2

I1. To limit the probability that the escape of liquid will not be minimized in the event of an unwanted release, which could lead to the spread of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
I2. To limit the probability that the escape of liquid will not be minimized in the event of a fire, which could lead to the spread of the fire, which could lead to damage to the building or facility.
3) The control console referred to in Sentence (2) shall be equipped to regulate the operation of each dispenser.

Exception:

except as stated in
- Sentences 4.6.8.2.(6) to (9), which apply to requirements pertaining to unattended self-service outlets,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

I1. To limit the probability that the escape of liquid will not be minimized in the event of an unwanted release, which could lead to the spread of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.

I2. To limit the probability that the escape of liquid will not be minimized in the event of a fire, which could lead to the spread of the fire, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Two way communication systems between attendant control consoles required in Sentence 4.6.8.2.(2) and each pump island, at self-service outlets that serve the general public.

Exception:
- except as stated in Sentences 4.6.8.2.(6) to (9), which apply to requirements pertaining to unattended self-service outlets,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

I1. To limit the probability that attendants and persons near the dispensers will not be able to communicate, which could lead to improper dispensing operations or sources of ignition, which could lead to the escape of liquid or the spread of liquid not being minimized in the event of an unwanted release, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Two way communication systems between attendant control consoles required in Sentence 4.6.8.2.(2) and each pump island, at self-service outlets that serve the general public.

Exception:
except as stated in
- Sentences 4.6.8.2.(6) to (9), which apply to requirements pertaining to unattended self-service outlets,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

11. To limit the probability that attendants and persons near the dispensers will not be able to communicate, which could lead to improper dispensing operations or sources of ignition, which could lead to
- the escape of liquid, or the spread of liquid not being minimized in the event of an unwanted release, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility, and
- a fire or explosion hazard, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.

Text

4) A 2-way communication system between the control console and each pump island shall be provided at self-service outlets.

Application

A1. Two way communication systems between attendant control consoles required in Sentence 4.6.8.2.(2) and each pump island, at self-service outlets that serve the general public.

Exception:

except as stated in

- Sentences 4.6.8.2.(6) to (9), which apply to requirements pertaining to unattended self-service outlets,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that attendants and persons near the dispensers will not be able to communicate, which could lead to improper dispensing operations or sources of ignition, which could lead to

- the escape of liquid, or the spread of liquid not being minimized in the event of an unwanted release, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons, and
- a fire or explosion hazard, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Dispensing of flammable liquids and combustible liquids by attendants at fuel-dispensing stations that provide both attended service and self-service and that serve the general public, where:
- each island has an emergency shut-off switch as described in Article 4.6.4.2., and
- the attendant is never more than 25 m from the self-service island or control console.

Exception:
- except as stated in Sentences 4.6.8.2.(6) to (9), which apply to requirements pertaining to unattended self-service outlets,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To exempt certain operations at stations from the application of Sentence 4.6.8.2.(2), which would otherwise implicitly require the attendant to be continuously on duty at the control console, if certain measures are taken.

These measures are to limit the probability that the attendants will be delayed in carrying out their duties in the event of an emergency, which could lead to the escape or spread of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

5) At fuel-dispensing stations that provide both attended service and self-service, the attendant required in Sentence 4.6.8.1.(1) is permitted to dispense flammable liquids or combustible liquids at the attended service island, provided that:

a) each island has an emergency shut-off switch as described in Article 4.6.4.2.; and

b) the attendant is never more than 25 m from the self-service island or control console.

Exception:

- except as stated in Sentences 4.6.8.2.(6) to (9), which apply to requirements pertaining to unattended self-service outlets,

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,

- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",

- appliances and their ancillary equipment within the scope of CAN/CSA-B139,

- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,

- the storage of aerosol products covered under Subsection 3.2.5.,

- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,

- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,

- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and

- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

A1. Dispensing of flammable liquids and combustible liquids by attendants at fuel-dispensing stations that provide both attended service and self-service and that serve the general public, where:

- each island has an emergency shut-off switch as described in Article 4.6.4.2.; and

- the attendant is never more than 25 m from the self-service island or control console.

Intent

I1. To exempt certain operations at stations from the application of Sentence 4.6.8.2.(2), which would otherwise implicitly require the attendant to be continuously on duty at the control console, if certain measures are taken.

These measures are to limit the probability that the attendants will be delayed in carrying out their duties in the event of an emergency, which could lead to:

- the escape or spread of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility, and

- a fire or explosion hazard, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.

5) At fuel-dispensing stations that provide both attended service and self-service, the attendant required in Sentence 4.6.8.1.(1) is permitted to dispense flammable liquids or combustible liquids at the attended service island, provided that:

a) each island has an emergency shut-off switch as described in Article 4.6.4.2., and

b) the attendant is never more than 25 m from the self-service island or control console.

Exception:

- except as stated in Sentences 4.6.8.2.(6) to (9), which apply to requirements pertaining to unattended self-service outlets,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Paragraph 4.6.8.2.(5)-02

Application

A1. Dispensing of flammable liquids and combustible liquids by attendants at fuel-dispensing stations that provide both attended service and self-service and that serve the general public, where:

- each island has an emergency shut-off switch as described in Article 4.6.4.2., and
- the attendant is never more than 25 m from the self-service island or control console.

Exception:

except as stated in

- Sentences 4.6.8.2.(6) to (9), which apply to requirements pertaining to unattended self-service outlets,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To exempt certain operations at stations from the application of Sentence 4.6.8.2.(2), which would otherwise implicitly require the attendant to be continuously on duty at the control console, if certain measures are taken.

These measures are to limit the probability that the attendants will be delayed in carrying out their duties in the event of an emergency, which could lead to:

- the escape or spread of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons, and
- a fire or explosion hazard, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.

6) Self-service outlets are permitted to operate as unattended self-service outlets in conformance with all relevant Sections of this Part and Sentences (7), (8) and (9).

Application

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To state the application of Sentences 4.6.8.2.(7) to (9).
Application and intent of Division B provisions

7) An unattended self-service outlet shall be provided with the following safety features:
a) a video recording surveillance system connected to a monitoring facility (see Appendix A),
b) a manually actuated emergency shut-off switch that
   i) shuts off power to the individual dispensing unit, and
   ii) can be actuated from both sides of the dispensing unit,
c) a readily accessible, manually actuated, master emergency shut-off switch that
   i) is located more than 6 m but less than 10 m from the dispensing island, and
   ii) shuts off power to all dispensing units at the station,
d) dispensing devices that can only be reset by trained personnel in attendance at the site in the
   event an emergency shut-off switch has been actuated,
e) a public pay telephone or other means of direct communication with the fire department provided
   in a location acceptable to the authority having jurisdiction,
f) an audible alarm actuated by the emergency shut-off switches that can be heard throughout the
   site,
g) a strobe light actuated by the emergency shut-off switch in Clause (b) or Clause (c) in a visible
   location,
h) dispensing pump cabinets and panels monitored with intrusion alarm devices connected to a
   monitoring facility,
i) pump control and accessory buildings that are protected with intrusion alarm devices and smoke
   and heat detection devices connected to the monitoring facility in Clause (a), and
j) electronic storage tank monitoring for inventory control.

Application

A1. A video recording surveillance system connected to a monitoring facility serving an unattended
self-service outlet.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of
    Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of the CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on
    isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas
    regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas
    regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash
    points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the
    incidental storage and handling of hydrocarbon-based chemicals resulting from or used during
    crude oil or natural gas exploration, production or transmission as mandated under the scope
    of EUB Guide 55.

Intent

I1. To enable the owner and the authority having jurisdiction to review a video record of accidents,
spills, and vandalism in order to identify the cause of an incident and implement changes to limit the
probability of future release of flammable liquids or combustible liquids, which could lead to
exposure to hazardous substances, which could lead to harm to persons.
Application and intent of Division B provisions

CodeText

7) An unattended self-service outlet shall be provided with the following safety features:
   a) a video recording surveillance system connected to a monitoring facility (see Appendix A),
   b) a manually actuated emergency shut-off switch that
      i) shuts off power to the individual dispensing unit, and
      ii) can be actuated from both sides of the dispensing unit,
   c) a readily accessible, manually actuated, master emergency shut-off switch that
      i) is located more than 6 m but less than 10 m from the dispensing island, and
      ii) shuts off power to all dispensing units at the station,
   d) dispensing devices that can only be reset by trained personnel in attendance at the site in the
event an emergency shut-off switch has been actuated,
   e) a public pay telephone or other means of direct communication with the fire department provided
   in a location acceptable to the authority having jurisdiction,
f) an audible alarm actuated by the emergency shut-off switches that can be heard throughout the
site,
g) a strobe light actuated by the emergency shut-off switch in Clause (b) or Clause (c) in a visible
location,
h) dispensing pump cabinets and panels monitored with intrusion alarm devices connected to a
monitoring facility,
i) pump control and accessory buildings that are protected with intrusion alarm devices and smoke
and heat detection devices connected to the monitoring facility in Clause (a), and
j) electronic storage tank monitoring for inventory control.

Application

A1. A manually actuated emergency shut-off switch at an unattended self-service outlet that
   - shuts off power to the individual dispensing unit, and
   - can be actuated from both sides of the dispensing unit.

Exception:
except as stated in
   - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
   - Sentence 4.1.1.1.(3), which applies to
      - the transportation of flammable liquids or combustible liquids under the “Transportation of
        Dangerous Goods Regulations”,
      - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
      - the storage of flammable liquids or combustible liquids on farms for individual farm use and on
        isolated construction projects,
      - the storage of aerosol products covered under Subsection 3.2.5.,
      - liquefied petroleum gas-burning appliances and equipment within the scope of the gas
        regulations made pursuant to the Safety Codes Act,
      - the production, storage or handling of liquefied natural gas within the scope of the gas
        regulations made pursuant to the Safety Codes Act,
      - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash
        points but that may be flammable under certain conditions, and
      - the storage and handling of raw production flammable liquids or combustible liquids and the
        incidental storage and handling of hydrocarbon-based chemicals resulting from or used during
        crude oil or natural gas exploration, production or transmission as mandated under the scope
        of EUB Guide 55.

Intent

I1. To limit the probability of delays in reaching and actuating the master emergency shut-off switch
in the event of an unwanted release of liquid, which could lead to the escape of liquid not being
minimized, which could lead to the spread of liquid, which could lead to harm to the public.

Application

A1. A readily accessible, manually actuated, master emergency shut-off switch at an unattended self-service outlet that
- is located more than 6 m but less than 10 m from the dispensing island, and
- shuts off power to all dispensing units at the station.

- a) a video recording surveillance system connected to a monitoring facility (see Appendix A),
- b) a manually actuated emergency shut-off switch that
  i) shuts off power to the individual dispensing unit, and
  ii) can be actuated from both sides of the dispensing unit,
- c) a readily accessible, manually actuated, master emergency shut-off switch that
  i) is located more than 6 m but less than 10 m from the dispensing island, and
  ii) shuts off power to all dispensing units at the station,
- d) dispensing devices that can only be reset by trained personnel in attendance at the site in the event an emergency shut-off switch has been actuated,
- e) a public pay telephone or other means of direct communication with the fire department provided in a location acceptable to the authority having jurisdiction,
- f) an audible alarm actuated by the emergency shut-off switches that can be heard throughout the site,
- g) a strobe light actuated by the emergency shut-off switch in Clause (b) or Clause (c) in a visible location,
- h) dispensing pump cabinets and panels monitored with intrusion alarm devices connected to a monitoring facility,
- i) pump control and accessory buildings that are protected with intrusion alarm devices and smoke and heat detection devices connected to the monitoring facility in Clause (a), and
- j) electronic storage tank monitoring for inventory control.

Application

g) a strobe light actuated by the emergency shut-off switch in Clause (b) or Clause (c) in a visible location,
h) dispensing pump cabinets and panels monitored with intrusion alarm devices connected to a monitoring facility,
i) pump control and accessory buildings that are protected with intrusion alarm devices and smoke and heat detection devices connected to the monitoring facility in Clause (a), and
j) electronic storage tank monitoring for inventory control.

Application

A1. Dispensing devices that can only be reset by trained personnel in attendance at the site of an unattended self-service outlet in the event an emergency shut-off switch has been actuated.

Exception:

except as stated in
   - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
   - Sentence 4.1.1.1.(3), which applies to
      i) the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
      ii) appliances and their ancillary equipment within the scope of CAN/CSA-B139,
      iii) the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
   - the storage of aerosol products covered under Subsection 3.2.5.,
   - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
   - the production, storage or handling of liquefied gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
   - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
   - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

11. To limit the probability of malfunctions, interference, tampering or misuse during resetting of an emergency shut-off switch, which could lead to the release of flammable liquids or combustible liquids, which could lead to exposure to hazardous substances, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number)  4.6.8.2.(7)-09
Attribution - functional statement/objective  F13-OHS

Application

A1. Provision at an unattended self-service outlet of a public pay telephone or other means of direct communication with the fire department in a location acceptable to the authority having jurisdiction.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",

Application

A1. Provision at an unattended self-service outlet of a public pay telephone or other means of direct communication with the fire department in a location acceptable to the authority having jurisdiction.

Exception:

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that notification to emergency responders of an emergency will be delayed, which could lead to a delay in emergency response operations, which could lead to the escape of liquid not being minimized in the event of an unwanted release, which could lead to the spread of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.

I2. To limit the probability that notification to emergency responders of an emergency will be delayed, which could lead to a delay in emergency response operations, which could lead to the escape of liquid not being minimized in the event of a fire, which could lead to the spread of the fire, which could lead to damage to the building or facility.
Application and intent of Division B provisions

7) An unattended self-service outlet shall be provided with the following safety features:
   a) a video recording surveillance system connected to a monitoring facility (see Appendix A),
   b) a manually actuated emergency shut-off switch that
      i) shuts off power to the individual dispensing unit, and
   c) a readily accessible, manually actuated, master emergency shut-off switch that
      i) is located more than 6 m but less than 10 m from the dispensing island, and
   i) shuts off power to all dispensing units at the station,
   d) dispensing devices that can only be reset by trained personnel in attendance at the site in the event an emergency shut-off switch has been actuated,

   e) a public pay telephone or other means of direct communication with the fire department provided in a location acceptable to the authority having jurisdiction,

   f) an audible alarm actuated by the emergency shut-off switches that can be heard throughout the site,

   g) a strobe light actuated by the emergency shut-off switch in Clause (b) or Clause (c) in a visible location,

   h) dispensing pump cabinets and panels monitored with intrusion alarm devices connected to a monitoring facility,

   i) pump control and accessory buildings that are protected with intrusion alarm devices and smoke and heat detection devices connected to the monitoring facility in Clause (a), and

   j) electronic storage tank monitoring for inventory control.

Application

A1. Provision at an unattended self-service outlet of a public pay telephone or other means of direct communication with the fire department in a location acceptable to the authority having jurisdiction.

Exception:
   except as stated in
   - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
   - Sentence 4.1.1.1.(3), which applies to
      - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
      - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
      - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
   - the storage of aerosol products covered under Subsection 3.2.5.,
   - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
   - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
   - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
   - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that notification to emergency responders of an emergency will be delayed, which could lead to a delay in emergency response operations, which could lead to the escape of liquid not being minimized in the event of an unwanted release, which could lead to the spread of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.

I2. To limit the probability that notification to emergency responders of an emergency will be delayed, which could lead to a delay in emergency response operations, which could lead to the escape of liquid not being minimized in the event of a fire, which could lead to the spread of the fire, which could lead to harm to persons.

7) An unattended self-service outlet shall be provided with the following safety features:

a) a video recording surveillance system connected to a monitoring facility (see Appendix A),
b) a manually actuated emergency shut-off switch that
i) shuts off power to the individual dispensing unit, and
ii) can be actuated from both sides of the dispensing unit,
c) a readily accessible, manually actuated, master emergency shut-off switch that
i) is located more than 6 m but less than 10 m from the dispensing island, and
ii) shuts off power to all dispensing units at the station,
d) dispensing devices that can only be reset by trained personnel in attendance at the site in the event an emergency shut-off switch has been actuated,
e) a public pay telephone or other means of direct communication with the fire department provided in a location acceptable to the authority having jurisdiction,
f) an audible alarm actuated by the emergency shut-off switches that can be heard throughout the site,
g) a strobe light actuated by the emergency shut-off switch in Clause (b) or Clause (c) in a visible location,
h) dispensing pump cabinets and panels monitored with intrusion alarm devices connected to a monitoring facility,
i) pump control and accessory buildings that are protected with intrusion alarm devices and smoke and heat detection devices connected to the monitoring facility in Clause (a), and
j) electronic storage tank monitoring for inventory control.

Application

A1. Provision of an audible alarm actuated by the emergency shut-off switches that can be heard throughout the site of an unattended self-service outlet.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that persons would be unaware of an emergency, which could lead to delays in evacuation or movement to a safe place, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

Exception:
- 7. An unattended self-service outlet shall be provided with the following safety features:
  a) a video recording surveillance system connected to a monitoring facility (see Appendix A),
  b) a manually actuated emergency shut-off switch that
     i) shuts off power to the individual dispensing unit, and
     ii) can be actuated from both sides of the dispensing unit,
  c) a readily accessible, manually actuated, master emergency shut-off switch that
     i) is located more than 6 m but less than 10 m from the dispensing island, and
     ii) shuts off power to all dispensing units at the station,
  d) dispensing devices that can only be reset by trained personnel in attendance at the site in the
     event an emergency shut-off switch has been actuated,
  e) a public pay telephone or other means of direct communication with the fire department provided
     in a location acceptable to the authority having jurisdiction,
  f) an audible alarm actuated by the emergency shut-off switches that can be heard throughout the
     site,
  g) a strobe light actuated by the emergency shut-off switch in Clause (b) or Clause (c) in a visible
     location,
  h) dispensing pump cabinets and panels monitored with intrusion alarm devices connected to a
     monitoring facility,
  i) pump control and accessory buildings that are protected with intrusion alarm devices and smoke
     and heat detection devices connected to the monitoring facility in Clause (a), and
  j) electronic storage tank monitoring for inventory control.

Application

A1. Provision of a strobe light actuated by the emergency shut-off switches that can be seen
    throughout the site of an unattended self-service outlet.

Exception:
- 7) An unattended self-service outlet shall be provided with the following safety features:
  a) a video recording surveillance system connected to a monitoring facility (see Appendix A),
  b) a manually actuated emergency shut-off switch that
     i) shuts off power to the individual dispensing unit, and
     ii) can be actuated from both sides of the dispensing unit,
  c) a readily accessible, manually actuated, master emergency shut-off switch that
     i) is located more than 6 m but less than 10 m from the dispensing island, and
     ii) shuts off power to all dispensing units at the station,
  d) dispensing devices that can only be reset by trained personnel in attendance at the site in the

Application

A1. Provision of a strobe light actuated by the emergency shut-off switches that can be seen
    throughout the site of an unattended self-service outlet.

CodeText

Application

A1. Provision of a strobe light actuated by the emergency shut-off switches that can be seen
    throughout the site of an unattended self-service outlet.

I1. To limit the probability that persons, with a hearing disability, would be unaware of an
    emergency, which could lead to delays in evacuation or movement to a safe place, which could lead
    to harm to persons.

7) An unattended self-service outlet shall be provided with the following safety features:
   a) a video recording surveillance system connected to a monitoring facility (see Appendix A),
   b) a manually actuated emergency shut-off switch that
      i) shuts off power to the individual dispensing unit, and
      ii) can be actuated from both sides of the dispensing unit,
   c) a readily accessible, manually actuated, master emergency shut-off switch that
      i) is located more than 6 m but less than 10 m from the dispensing island, and
      ii) shuts off power to all dispensing units at the station,
   d) dispensing devices that can only be reset by trained personnel in attendance at the site in the
      event an emergency shut-off switch has been actuated,
   e) a public pay telephone or other means of direct communication with the fire department provided
      in a location acceptable to the authority having jurisdiction,
   f) an audible alarm actuated by the emergency shut-off switches that can be heard throughout the
      site,
   g) a strobe light actuated by the emergency shut-off switch in Clause (b) or Clause (c) in a visible
      location,
   h) dispensing pump cabinets and panels monitored with intrusion alarm devices connected to a
      monitoring facility,
   i) pump control and accessory buildings that are protected with intrusion alarm devices and smoke
      and heat detection devices connected to the monitoring facility in Clause (a), and
   j) electronic storage tank monitoring for inventory control.

I1. To limit the probability that persons, with a hearing disability, would be unaware of an
   emergency, which could lead to delays in evacuation or movement to a safe place, which could lead
   to harm to persons.

7) An unattended self-service outlet shall be provided with the following safety features:
   a) a video recording surveillance system connected to a monitoring facility (see Appendix A),
   b) a manually actuated emergency shut-off switch that
      i) shuts off power to the individual dispensing unit, and
      ii) can be actuated from both sides of the dispensing unit,
   c) a readily accessible, manually actuated, master emergency shut-off switch that
      i) is located more than 6 m but less than 10 m from the dispensing island, and
      ii) shuts off power to all dispensing units at the station,
   d) dispensing devices that can only be reset by trained personnel in attendance at the site in the event an emergency shut-off switch has been actuated,
   e) a public pay telephone or other means of direct communication with the fire department provided in a location acceptable to the authority having jurisdiction,
   f) an audible alarm actuated by the emergency shut-off switches that can be heard throughout the site,
   g) a strobe light actuated by the emergency shut-off switch in Clause (b) or Clause (c) in a visible location,
   h) dispensing pump cabinets and panels monitored with intrusion alarm devices connected to a monitoring facility,
   i) pump control and accessory buildings that are protected with intrusion alarm devices and smoke and heat detection devices connected to the monitoring facility in Clause (a), and
   j) electronic storage tank monitoring for inventory control.

Application

A1. Provision of dispensing pump cabinets and panels monitored with intrusion alarm devices connected to a monitoring facility at an unattended self-service outlet.

Exception:
   except as stated in
   - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
   - Sentence 4.1.1.1.(3), which applies to
     - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
     - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
     - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
     - the storage of aerosol products covered under Subsection 3.2.5.,
     - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
     - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
     - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
   - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1.To limit the probability of unwanted access to display pumps and other equipment, which could lead to exposure to hazardous substances, which could lead to harm to persons.
I2.To limit the probability of unwanted access to display pumps and other equipment, which could lead to contact with energized equipment, which could lead to harm to persons.

   b) a manually actuated emergency shut-off switch that
      i) shuts off power to the individual dispensing unit, and
      ii) can be actuated from both sides of the dispensing unit,
   c) a readily accessible, manually actuated, master emergency shut-off switch that
      i) is located more than 6 m but less than 10 m from the dispensing island, and
      ii) shuts off power to all dispensing units at the station,
   d) dispensing devices that can only be reset by trained personnel in attendance at the site in the event an emergency shut-off switch has been actuated,
   e) a public pay telephone or other means of direct communication with the fire department provided in a location acceptable to the authority having jurisdiction,
   f) an audible alarm actuated by the emergency shut-off switches that can be heard throughout the site,
   g) a strobe light actuated by the emergency shut-off switch in Clause (b) or Clause (c) in a visible location,
   h) dispensing pump cabinets and panels monitored with intrusion alarm devices connected to a monitoring facility,
   i) pump control and accessory buildings that are protected with intrusion alarm devices and smoke and heat detection devices connected to the monitoring facility in Clause (a), and
   j) electronic storage tank monitoring for inventory control.

Application

A1. Monitoring of pump control and accessory buildings, at an unattended self-service outlet, by intrusion alarm devices and smoke and heat detection devices connected to a monitoring facility.

Exception: except as stated in
   - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
   - Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
   - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
   - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
   - the storage of aerosol products covered under Subsection 3.2.5.,
   - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
   - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
   - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flashpoints but that may be flammable under certain conditions, and
   - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I. To limit the probability of unwanted access to pump controls and other equipment, which could lead to exposure to hazardous substances, which could lead to harm to persons.
II. To limit the probability of unwanted access to pump controls and other equipment, which could lead to contact with energized equipment, which could lead to harm to persons.
Application and intent of Division B provisions

Exception:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

A1. Electronic storage tank monitoring for inventory control at an unattended self-service outlet.

Application

7) An unattended self-service outlet shall be provided with the following safety features:
   a) a video recording surveillance system connected to a monitoring facility (see Appendix A),
   b) a manually actuated emergency shut-off switch that
      i) shuts off power to the individual dispensing unit, and
      ii) can be actuated from both sides of the dispensing unit,
   c) a readily accessible, manually actuated, master emergency shut-off switch that
      i) is located more than 6 m but less than 10 m from the dispensing island, and
      ii) shuts off power to all dispensing units at the station,
   d) dispensing devices that can only be reset by trained personnel in attendance at the site in the event an emergency shut-off switch has been actuated,
   e) a public pay telephone or other means of direct communication with the fire department provided in a location acceptable to the authority having jurisdiction,
   f) an audible alarm actuated by the emergency shut-off switches that can be heard throughout the site,
   g) a strobe light actuated by the emergency shut-off switch in Clause (b) or Clause (c) in a visible location,
   h) dispensing pump cabinets and panels monitored with intrusion alarm devices connected to a monitoring facility,
   i) pump control and accessory buildings that are protected with intrusion alarm devices and smoke and heat detection devices connected to the monitoring facility in Clause (a), and
   j) electronic storage tank monitoring for inventory control.

Intent

I1. To limit the probability of release of liquid from an overfilled storage tank, which could lead to the spread of liquid, which could lead to exposure to hazardous substances, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeText
8) Dispensing units at an unattended self-service outlet shall be such that the maximum quantity of flammable liquids and combustible liquids that can be dispensed at one time is 100 L, after which a) the dispensing unit automatically shuts down, and b) further dispensing cannot occur until the dispensing unit has been reset and the customer has initiated the starting sequence.

Application
A1. Maximum quantity of flammable liquid or combustible liquid that can be dispensed at one time at an unattended self-service outlet before the dispensing unit automatically shuts down.

Exception:
- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
    - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent
I1. To limit the probability that a lack of control on the quantity of fuel being dispensed at an unattended self service outlet could lead to the escape of liquid not being minimized in the event of an unwanted release, which could lead to the spread of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.6.8.2.(8)-02
Attribution - functional statement/objective F02-O93.4

A1. Maximum quantity of flammable liquid or combustible liquid that can be dispensed at one time at an unattended self-service outlet before the dispensing unit automatically shuts down.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids and combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

8) Dispensing units at an unattended self-service outlet shall be such that the maximum quantity of flammable liquid and combustible liquid that can be dispensed at one time is 100 L, after which a) the dispensing unit automatically shuts down, and b) further dispensing cannot occur until the dispensing unit has been reset and the customer has initiated the starting sequence.

Intent

I1. To limit the probability that a lack of control on the quantity of fuel being dispensed at an unattended self service outlet could lead to the escape of liquid not being minimized in the event of an unwanted release, which could lead to the spread of liquid, which could lead to harm to persons.

I2. To limit the probability that the customer would attempt to restart the dispenser without checking to determine if there is a problem that could lead to continuing operation of the dispenser, which could lead to unintended release of fuel, which could lead to spread of fuel, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

4.6.8.2.(9)-01

Application

A1. Posting of weather resistant signs at an unattended self-service outlet indicating
- the location and use of the dispenser emergency shut-off switch,
- the location and use of the master emergency shut-off switch,
- that the user must stay outside their vehicle in view of the fuelling nozzle during dispensing,
- emergency instructions in the event of an accident or spill, and
- telephone numbers for the fire department.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that notification to emergency responders of an emergency will be delayed, which could lead to a delay in emergency response operations, which could lead to the escape of liquid not being minimized in the event of an unwanted release, which could lead to the spread of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.

I2. To limit the probability that notification to persons at the self-service outlet will be delayed, which could lead to a delay in emergency response, which could lead to the persons remaining at the site during a fire, which could lead to harm to persons.

I3. To limit the probability that a lack of information would lead to customers taking inappropriate action during an emergency, which could lead to unwanted release of liquid, which could lead to the spread of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.6.8.3.(1)-01
Attribution - functional statement/objective F12.F44-OH5

Application

A1. Attendants at self-service outlets using special dispensers including coin operated, card operated and preset units and that are open to the general public.

Exception:

- Article 4.6.8.4. for card activated or key activated equipment,
- Sentences 4.6.8.2.(6) to (9) for unattended self-service outlets, special dispensers including coin-operated, card operated and preset units, shall not be permitted at self-service outlets unless there is at least one qualified attendant on duty for each 12 hoses that can be operated simultaneously while the outlet is open to the public.

Intent

I1. To limit the probability that attendants will be delayed in carrying out their duties in the event of an emergency, which could lead to the escape of liquid not being minimized in the event of an unwanted release, which could lead to the spread of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Attendants at self-service outlets using special dispensers including coin operated, card operated and preset units and that are open to the general public.

Exception:
- except as stated in Article 4.6.8.4. for card- or key-activated equipment and Sentences 4.6.8.2.(6) to (9) for unattended self-service outlets, special dispensers including coin-operated, card operated and preset units, shall not be permitted at self-service outlets unless there is at least one qualified attendant on duty for each 12 hoses that can be operated simultaneously while the outlet is open to the public.

Application

A1. Attendants at self-service outlets using special dispensers including coin operated, card operated and preset units and that are open to the general public.

Exception:
- except as stated in Article 4.6.8.4. for card- or key-activated equipment,
- Sentences 4.6.8.2.(6) to (9), which apply to requirements pertaining to unattended self-service outlets,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that attendants will be delayed in carrying out their duties in the event of an emergency, which could lead to the escape of liquid not being minimized in the event of an unwanted release, which could lead to the spread of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility, and a fire or explosion hazard, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.6.8.3.(1)-03
Attribution - functional statement/objective F12.F44.F01-OS1.1

CodeText

1) Except as provided in Article 4.6.8.4. for card- or key-activated equipment and Sentences 4.6.8.2.(6) to (9) for unattended self-service outlets, special dispensers including coin-operated, card operated and preset units, shall not be permitted at self-service outlets unless there is at least one qualified attendant on duty for each 12 hoses that can be operated simultaneously while the outlet is open to the public.

Application

A1. Attendants at self-service outlets using special dispensers including coin operated, card operated and preset units and that are open to the general public.

Exception:

- except as stated in Article 4.6.8.4. for card activated or key activated equipment,
- Sentences 4.6.8.2.(6) to (9), which apply to requirements pertaining to unattended self-service outlets,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that attendants will be delayed in carrying out their duties in the event of an emergency, which could lead to

- the escape of liquid not being minimized in the event of an unwanted release, which could lead to the spread of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons, and
- a fire or explosion hazard, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.

Application

A1. Unattended self-service outlets and marine fuel-dispensing stations that are not open to the general public, in conformance with Sentences (2) to (6). (See Appendix A.)

Application

1) Card- or key-activated dispensers are permitted at unattended self-service outlets and fuel-dispensing stations that are not open to the general public, in conformance with Sentences (2) to (6). (See Appendix A.)

CodeText

1) Card- or key-activated dispensers are permitted at unattended self-service outlets and fuel-dispensing stations that are not open to the general public, in conformance with Sentences (2) to (6). (See Appendix A.)

Exception:

- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
    - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To state the application of Sentences 4.6.8.4.(2) to 4.6.8.4.(6).
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.6.8.4.(2)-01

2) Except as provided in Sentences (3) to (6), the installation of card- or key-activated dispensers shall conform to the requirements for self-service outlets and fuel-dispensing stations in this Section.

Exception:
except as stated in
- Sentences 4.6.8.4.(3) to (6), which clarify differences that apply to card activated and key activated dispensers,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

A1. Installation of card-activated dispensers or key activated dispensers at unattended self-service outlets and marine fuel-dispensing stations that are not open to the general public.

Intent

I1. To direct Alberta Fire Code 2006 users to pertinent provisions of Section 4.6. that are applicable to the installation of dispensers.
Application and intent of Division B provisions

Alberta Fire Code 2006

3) Operation of card- or key-activated dispensers shall be restricted to persons authorized by the supply agent to possess a card or key to operate the dispensers.

Application

A1. Access to card activated dispensers or key activated dispensers at unattended self-service outlets and marine fuel-dispensing stations that are not open to the general public.

Exception:

except as stated in
- Sentence 4.1.1.1.2(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.3, which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that dispensing operations will be carried out by untrained persons in an improper or unsafe manner, which could lead to the escape or spread of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Access to card activated dispensers or key activated dispensers at unattended self-service outlets and marine fuel-dispensing stations that are not open to the general public.

Exception:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent
H1. To limit the probability that dispensing operations will be carried out by untrained persons in an improper or unsafe manner, which could lead to
- the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility, and
- a fire or explosion hazard, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Access to card activated dispensers or key activated dispensers at unattended self-service outlets and marine fuel-dispensing stations that are not open to the general public.

Application

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that dispensing operations will be carried out by untrained persons in an improper or unsafe manner, which could lead to
- the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons, and
- a fire or explosion hazard, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Posting of operating instructions for dispensers [required in Sentence 4.6.8.2.(1)] at unattended self-service outlets and marine fuel-dispensing stations using card activated dispensers or key activated dispensers and that are not open to the general public.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

4) Clearly legible operating instructions, visible at all times, shall be posted at every dispenser island.

4.6.8.4.(4)-01

I1. To limit the probability that persons will not be familiar with dispensing operations, which could lead to the escape of liquid, which could lead to harm to the public.
A1. Posting of operating instructions for dispensers [required in Sentence 4.6.8.2.(1)] at unattended self-service outlets and marine fuel-dispensing stations using card activated dispensers or key activated dispensers and that are not open to the general public.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

I1. To limit the probability that persons will not be familiar with dispensing operations, which could lead to
- the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility, and
- a fire or explosion hazard, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
A1. Posting of operating instructions for dispensers [required in Sentence 4.6.8.2.(1)] at unattended self-service outlets and marine fuel-dispensing stations using card activated dispensers or key activated dispensers and that are not open to the general public.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

I1. To limit the probability that persons will not be familiar with dispensing operations, which could lead to - the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons, and
- a fire or explosion hazard, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.

CodeText

5) A telephone or other clearly identified means to notify the fire department shall be provided in a location readily accessible to the user.

Application

A1. Location of telephones or other clearly identified means to notify the fire department at unattended self-service outlets and marine fuel-dispensing stations using card activated dispensers or key activated dispensers and that are not open to the general public.

Exception:

except as stated in

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that notification to emergency responders of an emergency will be delayed, which could lead to a delay in emergency response operations, which could lead to the escape of liquid not being minimized in the event of an unwanted release, which could lead to the spread of liquid, which could lead to harm to the public.
A telephone or other clearly identified means to notify the fire department shall be provided in a location readily accessible to the user.

Application

A1. Location of telephones or other clearly identified means to notify the fire department at unattended self-service outlets and marine fuel-dispensing stations using card activated dispensers or key activated dispensers and that are not open to the general public.

Exception:

- except as stated in - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations";
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquid petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that notification to emergency responders of an emergency will be delayed, which could lead to a delay in emergency response operations, which could lead to the escape of liquid not being minimized in the event of an unwanted release, which could lead to the spread of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.

I2. To limit the probability that notification to emergency responders of an emergency will be delayed, which could lead to a delay in emergency response operations, which could lead to the escape of liquid not being minimized in the event of a fire, which could lead to the spread of the fire, which could lead to damage to the building or facility.
Application

A1. Location of telephones or other clearly identified means to notify the fire department at unattended self-service outlets and marine fuel-dispensing stations using card activated dispensers or key activated dispensers and that are not open to the general public.

Exception:

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,

I1. To limit the probability of delay in activating the shut-off device in the event of an unwanted release, which could lead to the escape of liquid not being minimized, which could lead to the spread of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.

I2. To limit the probability of delay in activating the shut-off device in the event of a fire, which could lead to the escape of liquid not being minimized, which could lead to the spread of the fire, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

Application

6) Emergency instructions, including the telephone number of the local fire department, shall be conspicuously posted to advise the user, in the event of a spill or accident, to use the emergency shut-off switch required in Article 4.6.4.2., and to call the fire department.

Exception:

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

6) Emergency instructions, including the telephone number of the local fire department, shall be conspicuously posted to advise the user, in the event of a spill or accident, a) to use the emergency shut-off switch required in Article 4.6.4.2., and b) to call the fire department.

Application

A1. Posting of emergency instructions advising the user to call the fire department in the event of a spill or accident at unattended self-service outlets and marine fuel-dispensing stations using card activated dispensers or key activated dispensers and that are not open to the general public.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that notification to emergency responders of an emergency will be delayed, which could lead to a delay in emergency response operations, which could lead to the escape of liquid not being minimized in the event of an unwanted release, which could lead to the spread of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.

I2. To limit the probability that notification to emergency responders of an emergency will be delayed, which could lead to a delay in emergency response operations, which could lead to the escape of liquid not being minimized in the event of a fire, which could lead to the spread of the fire, which could lead to damage to the building or facility.

CodeText

A1. Responsibility of attendants at fuel-dispensing stations to prevent the dispensing of flammable liquids and combustible liquids into containers that are located in a vehicle.

Exception:

except as stated in
- Sentence 4.1.6.4.(1), when a spill or accident occurs that involves flammable liquids or combustible liquids.

Application

A1. Responsibility of attendants at fuel-dispensing stations that serve the general public to prevent the dispensing of flammable liquids and combustible liquids into containers that are located in a vehicle.

1) Attendants on duty at fuel-dispensing stations shall
   a) supervise the dispensing of flammable liquids and combustible liquids,
   b) activate the controls to permit the dispensing of fuel at an individual dispenser only after the customer at the unit is ready to activate the nozzle,
   c) prevent the dispensing of flammable liquids and combustible liquids into containers that
      i) do not conform to Article 4.2.3.1., or
      ii) are in a vehicle,
   d) take appropriate measures to prevent sources of ignition from creating a hazard at the dispensers,
   e) take appropriate action in the event of a spill to reduce the risk of fire,
   f) shut off the power to all dispensers in the event of a spill or fire, and
   g) notify the fire department forthwith in accordance with Sentence 4.1.6.4.(1), when a spill or accident occurs that involves flammable liquids or combustible liquids.

Intent

I1. To limit the probability that liquid or vapour will escape and spread into the interior of a vehicle, which could lead to the accumulation of vapour in sufficient quantity to form an ignitable mixture, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons in or near the vehicle.

Alberta Fire Code 2006

Application and intent of Division B provisions

A1. Action to be taken by attendants to shut off the power to all dispensers in the event of a spill or fire at fuel-dispensing stations that serve the general public.

Exception:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of the Canada Standards Association Code (CAN/CSA-B139),
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of the Environment and Water Protection Act.

Intent
I1. To limit the probability that the escape of liquid will not be minimized in the event of an unwanted release, which could lead to the spread of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.

I2. To limit the probability that the escape of liquid will not be minimized in the event of a fire, which could lead to the spread of the fire, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Responsibility of attendants at fuel-dispensing stations that serve the general public to prevent the dispensing of flammable liquids and combustible liquids into containers that do not conform to Article 4.2.3.1., or are in a vehicle.

d) take appropriate measures to prevent sources of ignition from creating a hazard at the dispensers;

e) take appropriate action in the event of a spill to reduce the risk of fire;
f) shut off the power to all dispensers in the event of a spill or fire, and

g) notify the fire department forthwith in accordance with Sentence 4.1.6.4.(1), when a spill or accident occurs that involves flammable liquids or combustible liquids.

Application

A1. Responsibility of attendants at attended fuel-dispensing stations that serve the general public to prevent the dispensing of flammable liquids and combustible liquids into containers that do not conform to Article 4.2.3.1.

Exception:

- the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”;
- appliances and their ancillary equipment within the scope of CAN/CSA-B139;
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects;
- the storage of aerosol products covered under Subsection 3.2.5.;
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act;
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act;
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To direct Alberta Fire Code 2006 users to Article 4.2.3.1.
Application and intent of Division B provisions

Application

Attendants on duty at fuel-dispensing stations shall
a) supervise the dispensing of flammable liquids and combustible liquids,
b) activate the controls to permit the dispensing of fuel at an individual dispenser only after the customer at the unit is ready to activate the nozzle,
c) prevent the dispensing of flammable liquids and combustible liquids into containers that
   i) do not conform to Article 4.2.3.1., or
   ii) are in a vehicle,
d) take appropriate measures to prevent sources of ignition from creating a hazard at the dispensers,
e) take appropriate action in the event of a spill to reduce the risk of fire,
f) shut off the power to all dispensers in the event of a spill or fire, and
   g) notify the fire department forthwith in accordance with Sentence 4.1.6.4.(1), when a spill or accident occurs that involves flammable liquids or combustible liquids.

Exception:
except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent
I1. To direct Alberta Fire Code 2006 users to Article 4.1.6.4.(1).
Application and intent of Division B provisions

Alberta Fire Code 2006

2) In addition to the requirements in Sentence (1), attendants on duty at marine fuel-dispensing stations shall a) activate the controls to permit the dispensing of fuel at an individual dispenser only after all ports and hatches on the watercraft have been closed, and
b) ensure that containers for flammable liquids and combustible liquids, i) are not filled beyond their safe filling level, and
ii) are filled only after they have been removed from the watercraft or aircraft.

Application

A1. Responsibility of attendants at [attended] marine fuel-dispensing stations that serve [are open to] the general public to ensure that controls to permit the dispensing of fuel at an individual dispenser are activated only after all ports and hatches on the watercraft have been closed.

Exception:

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- Sentence 4.1.1.1.(4), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- Sentence 4.1.1.1.(5), which applies to the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- Sentence 4.1.1.1.(6), which applies to liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- Sentence 4.1.1.1.(7), which applies to the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- Sentence 4.1.1.1.(8), which applies to liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- Sentence 4.1.1.1.(9), which applies to the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that liquid or vapour will escape and spread into the interior of watercraft, which could lead to the accumulation of vapour in sufficient quantity to form an ignitable mixture, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons or in or near the watercraft.
Application and intent of Division B provisions

Alberta Fire Code 2006

[4.6.8.5.(2)-02]

F44.F01-OS1.1

Application

A1. Responsibility of attendants at [attended] marine fuel-dispensing stations that serve [are open to] the general public to ensure that containers for flammable liquids and combustible liquids, are filled only after they have been removed from the watercraft or aircraft.

Exception:

except as stated in

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
- the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that liquid or vapour will escape and spread into the interior of watercraft, which could lead to the accumulation of vapour in sufficient quantity to form an ignitable mixture, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons in or near the watercraft.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Responsibility of attendants at marine fuel-dispensing stations that serve the general public to ensure that containers for flammable liquids and combustible liquids, are not filled beyond their safe filling level.

Exception:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

In addition to the requirements in Sentence (1), attendants on duty at marine fuel-dispensing stations shall:

- activate the controls to permit the dispensing of fuel at an individual dispenser only after all ports and hatches on the watercraft have been closed, and
- ensure that containers for flammable liquids and combustible liquids, i) are not filled beyond their safe filling level, and
  - ii) are filled only after they have been removed from the watercraft or aircraft.

Application

To limit the probability that liquid will escape from containers, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Responsibility of attendants at marine fuel-dispensing stations that serve the general public to ensure that containers for flammable liquids and combustible liquids, are not filled beyond their safe filling level.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

2) In addition to the requirements in Sentence (1), attendants on duty at marine fuel-dispensing stations shall
a) activate the controls to permit the dispensing of fuel at an individual dispenser only after all ports and hatches on the watercraft have been closed, and
b) ensure that containers for flammable liquids and combustible liquids, i) are not filled beyond their safe filling level, and
ii) are filled only after they have been removed from the watercraft or aircraft.

Exception:
- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

11. To limit the probability that liquid will escape from containers, which could lead to the accumulation of vapour in sufficient quantity to form an ignitable mixture, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Responsibility of attendants at marine fuel-dispensing stations that serve the general public to ensure that containers for flammable liquids and combustible liquids, are filled only after they have been removed from the watercraft or aircraft.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that liquid or vapour will escape and spread into the interior of a watercraft or aircraft, which could lead to the accumulation of vapour in sufficient quantity to form an ignitable mixture, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons in or near the watercraft or aircraft.

3) Attendants shall be trained on how to conduct their duties including but not limited to, a) inventory reconciliation practices, b) proper and safe product transfer procedures, and c) responsibilities identified in this Code.

Application

A1. Training of attendants at [attended] fuel-dispensing stations that serve [are open to] the general public.

Exception:

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of
    Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and
    on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas
    regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas
    regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash
    points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the
    incidental storage and handling of hydrocarbon-based chemicals resulting from or used during
    crude oil or natural gas exploration, production or transmission as mandated under the scope
    of EUB Guide 55.

Intent

11. To limit the probability of inappropriate actions by personnel during emergency situations, which
   could lead to a fire or explosion, which could lead to harm to persons.
12. To limit the probability that delays or inefficiencies in responding to a fire emergency will lead to
   the spread of the fire beyond the point of origin, which could lead to harm to persons, including
   emergency responders.

1) Except as provided in Sentence (2), flammable liquids and combustible liquids shall not be dispensed into the fuel tank of a motor vehicle, watercraft or aircraft while the engine is running.

Exception:
- except as stated in
  - Sentence 4.6.8.6.(2), which applies to the dispensing of Class II and Class IIIA liquids,
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
    - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

A1. Dispensing of flammable liquids or combustible liquids into the fuel tank of motor vehicles, aircraft, or watercraft while the engine is running, at fuel-dispensing stations:

Exception:
except as stated in
- Sentence 4.6.8.6.(2), which applies to the dispensing of Class II and Class IIIA liquids,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that vapour generated by dispensing operations or caused by an unwanted escape of liquid will be ignited, which could lead to harm to persons.
Application and intent of Division B provisions

CodeText

2) It is permitted to dispense a Class II or IIIA liquid into the fuel tank of a motor vehicle while its engine is running provided it is dispensed not less than 6 m away from any Class I liquid dispenser. (See Appendix A.)

Application

A1. Dispensing of Class II and Class IIIA liquids into the fuel tank of a motor vehicle or watercraft while its engine is running, at fuel-dispensing stations where the dispensing is done not less than 6 m away from any Class I liquid dispenser.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To exempt liquids with a lower flammability risk from the application of Sentence 4.6.8.6.(1), which would otherwise require the engines to be turned off, if certain measures are taken (a minimum distance is maintained).

These measures are to limit the probability that
- the vapour from nearby Class I liquid dispensers will be ignited by the engine, which could lead to harm to persons, and
- the vapour from nearby Class I liquid dispensers will be drawn into the engine's intake system, which could lead to over-revving or overheating of the engine, which could lead to a fire, which could lead to harm to persons.
Application and intent of Division B provisions

**Alberta Fire Code 2006**

Application and intent of Division B provisions

**CodeText**

3) Class I and II liquids shall not be dispensed at a fuel-dispensing station into the fuel tank of a motor vehicle while any part of the motor vehicle or any vehicle attached to it is on a street.

**Application**

A1. Location of motor vehicles being refuelled with Class I or Class II liquids at fuel-dispensing stations.

Exception:

except as stated in

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

**Intent**

I1. To limit the probability that liquid will escape and spread outside of the fuel dispensing station area, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons nearby.

I2. To limit the probability that ignition sources outside of the fuel dispensing station area will ignite vapour, which could lead to a fire or explosion involving the vehicle being refuelled, which could lead to harm to persons nearby.

I3. To limit the probability that vehicles will become involved in a collision while being refuelled, which could lead to a fire or explosion, which could lead to harm to persons.
Application and intent of Division B provisions
Alberta Fire Code 2006

A1. Responsibility [or duties, as referred to in Sentence 4.6.8.2.(1)] for persons [attendants and customers] in the event of spillage while dispensing flammable liquids or combustible liquids at fuel-dispensing stations to apply absorbent material to the spilled liquid immediately.

Exception:
- except as stated in Article 4.6.8.5., which applies to attendants at attended fuel-dispensing stations,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

4) Every person dispensing flammable liquids and combustible liquids shall
a) take precautions to prevent overflow or spillage of the liquid being dispensed,
b) not knowingly overfill the fuel system,
c) except as otherwise stated in Article 4.6.8.5., in the event of spillage, immediately apply an
absorbent material to soak up the spillage in conformance with Article 4.1.6.3.,
d) not dispense Class I or II liquids in proximity to open sources of ignition,
e) not use any object or device that is not an integral part of the hose nozzle valve assembly to
maintain the flow of fuel,
f) not dispense the liquids into containers that are in a vehicle, watercraft or aircraft, and
g) be at least 16 years of age.

Application

A1. Responsibility (or duties, as referred to in Sentence 4.6.8.2.(1)) for persons (attendants and
customers) in the event of spillage while dispensing flammable liquids or combustible liquids at fuel-
dispensing stations to apply absorbent material to the spilled liquid immediately.

Exception:
except as stated in
- Article 4.6.8.5., which applies to attendants at attended fuel-dispensing stations,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of
    Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on
    isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas
    regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas
    regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash
    points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the
    incidental storage and handling of hydrocarbon-based chemicals resulting from or used during
    crude oil or natural gas exploration, production or transmission as mandated under the scope
    of EUB Guide 55.

Intent

11. To limit the probability that the liquid will spread beyond the spill area, which could lead to the
ignition of vapour from a nearby ignition source, which could lead to damage to the building or
facility.
Application and intent of Division B provisions

- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

11. To limit the probability that the liquid will spread beyond the spill area, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Responsibility [or duties, as referred to in Sentence 4.6.8.2.(1)] for persons [attendants and customers] dispensing Class I or II liquids at fuel-dispensing stations to ensure that Class I or II liquids are not dispensed into containers that are in a vehicle, watercraft or aircraft, and

f) not dispense the liquids into containers that are in a vehicle, watercraft or aircraft, and
g) be at least 16 years of age.

Application

A1. Responsibility [or duties, as referred to in Sentence 4.6.8.2.(1)] for persons [attendants and customers] dispensing Class I or II liquids at fuel-dispensing stations to ensure that Class I or II liquids are not dispensed into containers that are in a vehicle, watercraft, or aircraft.

Exception:

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
- the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that liquid or vapour will escape and spread into the interior of a vehicle, aircraft, or watercraft, which could lead to the accumulation of vapour in sufficient quantity to form an ignitable mixture, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.

     - the storage of flammable liquids or combustible liquids on farms for individual farm use and on
       isolated construction projects,
     - the storage of aerosol products covered under Subsection 3.2.5.,
     - liquefied petroleum gas-burning appliances and equipment within the scope of the gas
       regulations made pursuant to the Safety Codes Act,
     - the production, storage or handling of liquefied natural gas within the scope of the gas
       regulations made pursuant to the Safety Codes Act,
     - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash
       points but that may be flammable under certain conditions, and
     - the storage and handling of raw production flammable liquids or combustible liquids and the
       incidental storage and handling of hydrocarbon-based chemicals resulting from or used during
       crude oil or natural gas exploration, production or transmission as mandated under the scope of
       EUB Guide 55.

Intent

I1. To limit the probability that liquid will escape, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

CodeReference (including record number) 4.6.8.6.(4)-06
Attribution - functional statement/objective F43-051.1

CodeText
4) Every person dispensing flammable liquids and combustible liquids shall
a) take precautions to prevent overflow or spillage of the liquid being dispensed,
b) not knowingly overfill the fuel system,
c) except as otherwise stated in Article 4.6.8.5., in the event of spillage, immediately apply an
absorbent material to soak up the spillage in conformance with Article 4.1.6.3.,
d) not dispense Class I or II liquids in proximity to open sources of ignition,
e) not use any object or device that is not an integral part of the hose nozzle valve assembly to
maintain the flow of fuel,
f) not dispense the liquids into containers that are in a vehicle, watercraft or aircraft, and

g) be at least 16 years of age.

Application
A1. Responsibility (or duties, as referred to in Sentence 4.6.8.2.(1)) for persons (attendants and
customers) dispensing Class I or II liquids at fuel-dispensing stations to
- take precautions to prevent overflow or spillage of the liquid being dispensed,
- not knowingly overfill a fuel system or container,
- not use any object or device that is not an integral part of the hose nozzle valve assembly to
maintain the flow of fuel.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
- the transportation of flammable liquids or combustible liquids under the "Transportation of
Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on
isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas
regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas
regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash
points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the
incidental storage and handling of hydrocarbon-based chemicals resulting from or used during
 crude oil or natural gas exploration, production or transmission as mandated under the scope
of EUB Guide 55.

Intent
I1. To limit the probability that liquid will escape, which could lead to the ignition of vapour from a
nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Responsibility (or duties, as referred to in Sentence 4.6.8.2.(1)) for persons (attendants and customers) dispensing Class I or II liquids at fuel-dispensing stations to ensure that Class I or II liquids are not dispensed in proximity to open sources of ignition.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

A1. Responsibility (or duties, as referred to in Sentence 4.6.8.2.(1)) for persons (attendants and customers) dispensing Class I or II liquids at fuel-dispensing stations to ensure that Class I or II liquids are not dispensed in proximity to open sources of ignition.

Exception:
- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that vapour will be ignited, which could lead to harm to persons.
Application and intent of Division B provisions

4) Every person dispensing flammable liquids and combustible liquids shall
a) take precautions to prevent overflow or spillage of the liquid being dispensed,
b) not knowingly overfill the fuel system,
c) except as otherwise stated in Article 4.6.8.5., in the event of spillage, immediately apply an
absorbent material to soak up the spillage in conformance with Article 4.1.6.3.,
d) not dispense Class I or II liquids in proximity to open sources of ignition,
e) not use any object or device that is not an integral part of the hose nozzle valve assembly to
maintain the flow of fuel,
f) not dispense the liquids into containers that are in a vehicle, watercraft or aircraft, and

Application

A1. Responsibility (or duties, as referred to in Sentence 4.6.8.2.(1)) for persons [attendants and
customers] in the event of spillage while dispensing flammable liquids or combustible liquids at fuel-
dispensing stations to apply absorbent material to the spilled liquid immediately.

Exception:

except as stated in
- Article 4.6.8.5., which applies to attendants at attended fuel-dispensing stations,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of
    Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on
    isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas
    regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas
    regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash
    points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the
    incidental storage and handling of hydrocarbon-based chemicals resulting from or used during
    crude oil or natural gas exploration, production or transmission as mandated under the scope
    of EUB Guide 55.

Intent

H. To direct Alberta Fire Code 2006 users to Article 4.1.6.3.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Responsibility (or duties, as referred to in Sentence 4.6.8.2.(1)) for persons (attendants and customers) in the event of spillage while dispensing flammable liquids or combustible liquids at fuel-dispensing stations to apply absorbent material to the spilled liquid immediately.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

CodeText

4) Every person dispensing flammable liquids and combustible liquids shall:
   a) take precautions to prevent overflow or spillage of the liquid being dispensed,
   b) not knowingly overfill the fuel system,
   c) except as otherwise stated in Article 4.6.8.5., in the event of spillage, immediately apply an absorbent material to soak up the spillage in conformance with Article 4.1.6.3.,
   d) not dispense Class I or II liquids in proximity to open sources of ignition,
   e) not use any object or device that is not an integral part of the hose nozzle valve assembly to maintain the flow of fuel,
   f) not dispense the liquids into containers that are in a vehicle, watercraft or aircraft, and
   g) be at least 16 years of age.

Exception:
- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To waive the requirement for applying an absorbent material if it is in conflict with other duties carried out by attendants, e.g. stopping the flow of liquid [which would have priority], as required in Article 4.6.8.5.

I2. To clarify that the duties of attendants in Article 4.6.8.5. have priority and take precedence.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.6.8.6.(4)-10

4) Every person dispensing flammable liquids and combustible liquids shall
a) take precautions to prevent overflow or spillage of the liquid being dispensed,
b) not knowingly overfill the fuel system,
c) except as otherwise stated in Article 4.6.8.5., in the event of spillage, immediately apply an absorbent material to soak up the spillage in conformance with Article 4.1.6.3.,
d) not dispense Class I or II liquids in proximity to open sources of ignition,
e) not use any object or device that is not an integral part of the hose nozzle valve assembly to maintain the flow of fuel,
f) not dispense the liquids into containers that are in a vehicle, watercraft or aircraft, and

Application

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To clarify the minimum age of a person permitted to dispense flammable liquids or combustible liquids.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Minimum distance of smoking and non-fixed sources of ignition from dispensers at fuel-dispensing stations.

A2. This also applies to the minimum distance of ignition sources from tank vehicles [when located on a property covered by this Code] and their delivery equipment, during loading and unloading operations, as stated in Sentence 4.11.3.2.(1).

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent
I1. To limit the probability that vapour generated by the dispensing operation or caused by an unwanted escape of liquid will be ignited, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.6.8.8.(1)-01
Attribution - functional statement/objective F01-OS1.1

Application

A1. Provision and visibility of signs [for control of smoking and for vehicle ignition to be turned off] at each dispenser at fuel-dispensing stations.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that signs [warning of the restrictions concerning ignition sources as described in Sentence 4.6.8.8.(2)] will not be seen, which could lead to the ignition of vapour [resulting from the normal operation of the dispenser or an unwanted escape of liquid], which could lead to harm to persons.
Application and intent of Division B provisions

Application

A1. Durability [with respect to weather-resistance] of signs [for control of smoking and for vehicle ignition to be turned off] for each dispenser in a location visible to every driver approaching the dispenser, at fuel-dispensing stations.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

11. To limit the probability that weather will prematurely deteriorate the signs [warning of the ignition sources as described in Sentence 4.6.8.8.(2)], which could lead to the instructions not being legible, which could lead to failure to obey the instructions, which could lead to the ignition of vapour [resulting from the normal operation of the dispenser or an unwanted escape of liquid], which could lead to harm to persons.
A1. Design of signs [for control of smoking and for vehicle ignition to be turned off] for each dispenser in a location visible to every driver approaching the dispenser, at fuel-dispensing stations.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Design of signs (for control of smoking and for vehicle ignition to be turned off) for each dispenser in a location visible to every driver approaching the dispenser, at fuel-dispensing stations.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that persons will not be informed of the fire hazards associated with smoking and vehicle ignition sources, which could lead to the ignition of vapour [resulting from the normal operation of the dispenser or an unwanted escape of liquid], which could lead to harm to persons.

I2. To supersede specifications for NO SMOKING signs in Article 2.4.2.2.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Design of signs [for control of smoking and for vehicle ignition to be turned off as described in Sentence 4.6.8.8.(2)] for each dispenser in a location visible to every driver approaching the dispenser, at fuel-dispensing stations.

Exception: except as stated in
- Sentence 4.6.8.8.(4), which applies to signs displaying the international “No Smoking Ignition Off” symbol not less than 100 mm in diameter,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

F01-OS1.1

Attribution - functional statement/objective

4.6.8.8.(3)-01

CodeReference (including record number) F01-OS1.1

CodeText

3) The sign required in Sentence (1) shall
   a) have a minimum dimension of 200 mm, and
   b) except as permitted in Sentence (4), have letters not less than 25 mm high.

Application

A1. Design of signs [for control of smoking and for vehicle ignition to be turned off as described in Sentence 4.6.8.8.(2)] for each dispenser in a location visible to every driver approaching the dispenser, at fuel-dispensing stations.

Exception: except as stated in
- Sentence 4.6.8.8.(4), which applies to signs displaying the international “No Smoking Ignition Off” symbol not less than 100 mm in diameter,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that the information on the signs will not be legible, which could lead to the instructions on the sign not being read or understood, which could lead to the ignition of vapour [resulting from the normal operation of the dispenser or an unwanted escape of liquid], which could lead to harm to persons.

I2. To supersede specifications for NO SMOKING signs in Article 2.4.2.2.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Design of signs [for control of smoking and for vehicle ignition to be turned off] for each dispenser in a location visible to every driver approaching the dispenser, at fuel-dispensing stations.

Exception:
except as stated in:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to:
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

I1. To limit the probability that the information on the signs will not be legible, which could lead to the instructions on the sign not being read or understood, which could lead to the ignition of vapour [resulting from the normal operation of the dispenser or an unwanted escape of liquid], which could lead to harm to persons.

I2. To supersede specifications for NO SMOKING signs in Article 2.4.2.2.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Minimum number and rating of portable extinguishers at fuel-dispensing stations.

Exception:
- except as stated in - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that fire suppression operations using the extinguishers will be delayed or ineffective in controlling or suppressing a fire, which could lead to the spread of the fire, which could lead to damage to the building or facility.

I2. To supersede the general provisions stated in Article 2.1.5.1. regarding the number and rating of portable extinguishers.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Minimum number and rating of portable extinguishers at fuel-dispensing stations.

1) At least 2 portable extinguishers, each having a rating of not less than 40-B:C, shall be provided at every fuel-dispensing station.

Exception:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

F12,F02-OS1.2

Attribution - functional statement/objective

I1. To limit the probability that fire suppression operations using the extinguishers will be delayed or ineffective in controlling or suppressing the fire, which could lead to the spread of the fire, which could lead to harm to persons.

I2. To supersede the general provisions stated in Article 2.1.5.1. regarding the number and rating of portable extinguishers.

2) Individual extinguishers required by Sentence (1) shall weigh not more than 4.6 kg.

Application

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

II. To limit the probability that portable extinguishers would be too heavy for use by persons at a fuel-dispensing station.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Absorbent material to be used by attendants in the event of spillage, at attended fuel-dispensing stations in conformance with Article 4.1.6.3.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to-
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

A1. Absorbent material to be used by attendants in the event of spillage, at attended fuel-dispensing stations.

Intent

I1. To direct Alberta Fire Code 2006 users to Article 4.1.6.3.
Application and intent of Division B provisions

Alberta Fire Code 2006

This includes:
- dispensing unit hoses and nozzles to ensure safe operation,
- dispensing unit pumps and fittings to determine if there are any leaks,
- fill boxes and fill pipe areas for product spillage,
- storage tank vents to ensure piping or openings are not blocked or damaged.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects.
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects.

Application

This includes:
- dispensing unit hoses and nozzles to ensure safe operation,
- dispensing unit pumps and fittings to determine if there are any leaks,
- fill boxes and fill pipe areas for product spillage,
- storage tank vents to ensure piping or openings are not blocked or damaged.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects.
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects.
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects.
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects.

Intent

11. To limit the probability that a lack of inspection would result in defects not being noticed and corrected, which could lead to an unwanted release of liquids, which could lead to the spread of liquid beyond the spill area, which could lead to harm to the public.

12. To limit the probability that a lack of inspection would result in spilled liquids not being noticed and cleaned up, which could lead to the spread of the liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

CodeReference (including record number) 4.6.10.1.(1)-02
Attribution - functional statement/objective F01,F43,F82-OP1.1

CodeText

1 Application of self-service outlets, fuel-dispensing stations and marine fuel-dispensing stations

shall ensure that a weekly inspection is conducted of
a) dispensing unit hoses and nozzles to ensure safe operation,
b) dispensing unit pumps and fittings to determine if there are any leaks,
c) fill boxes and fill pipe areas for product spillage, and

d) storage tank vents to ensure piping or openings are not blocked or damaged.

Application

This includes
- dispensing unit hoses and nozzles to ensure safe operation,
- dispensing unit pumps and fittings to determine if there are any leaks,
- fill boxes and fill pipe areas for product spillage,
- storage tank vents to ensure piping or openings are not blocked or damaged.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to

appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that a lack of inspection would result in defects not being noticed and corrected, which could lead to unwanted release of liquids, which could lead to a release of vapour, which could be ignited by a nearby source of ignition, which could lead to the spread of fire to nearby buildings and facilities, which could lead to damage to buildings and facilities.

I2. To limit the probability that a lack of inspection would result in spilled liquids not being noticed and cleaned up, which could lead to a release of vapour, which could be ignited by a nearby source of ignition, which could lead to the spread of fire to nearby buildings and facilities, which could lead to damage to buildings and facilities.

I1. To limit the probability that a lack of inspection would result in defects not being noticed and corrected, which could lead to an unwanted release of liquids, which could lead to a release of vapour, which could be ignited by a nearby source of ignition, which could lead to the spread of fire to nearby buildings and facilities, which could lead to harm to persons.

I2. To limit the probability that a lack of inspection would result in spilled liquids not being noticed and cleaned up, which could lead to a release of vapour, which could be ignited by a nearby source of ignition, which could lead to the spread of fire to nearby buildings and facilities, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Daily inspection by operators of self-service outlets, fuel-dispensing stations, and marine fuel-dispensing stations of electronic liquid measuring or leak detection equipment to confirm that the equipment is functioning as intended.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations";
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

11. To limit the probability that a lack of effective product monitoring would result in leaks not being detected and corrective action not taken, which could lead to an unwanted release of liquid, which could lead to spread of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.6.10.2.(1)-01
Attribution - functional statement/objective F43.F81.F82-OH5

CodeText

A1. Inspection and maintenance by operators of self-service outlets, fuel-dispensing stations, and marine fuel-dispensing stations of the cathodic protection systems on underground storage tanks and piping in conformance with:

a) CAN/ULC-S603.1, “Galvanic Corrosion Protection Systems for Steel Underground Tanks for Flammable and Combustible Liquids,” for sacrificial anode systems, or
b) PACE Report 87-1, “Impressed Current Method of Cathodic Protection of Underground Storage Tanks,” Clause 5.5(c) and Part 6.0 for impressed current systems.

Application

A1. Inspection and maintenance by operators of self-service outlets, fuel-dispensing stations, and marine fuel-dispensing stations of the cathodic protection systems on underground storage tanks and piping.

Exception:

except as stated in:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to:
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of the can/csa-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability of underground storage tank or piping failure as a result of inadequate cathodic protection, which could lead to the escape of liquids, which could lead to the spread of liquids, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

Attribution - functional statement/objective F43,F81,F82-OH5

CodeText

2) Impressed current cathodic protection systems shall be supplied with electrical power on a continuous basis and the power supply shall be inspected at least weekly.

Application

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
- the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that a lack of adequate impressed cathodic protection for an underground storage tank and piping could lead to premature corrosion of the underground storage tank and piping, which would not be controlled and could lead to failure of an underground storage tank or the piping, which could lead to the escape of liquid, which could lead to the spread of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Immediate corrective action required at a self-service outlet, a fuel-dispensing station or a marine fuel-dispensing station when a contravention of one or more of the following is identified:
- defective dispensing unit hoses and nozzles that do not ensure safe operation,
- defective dispensing unit pumps and fittings that show signs of leakage,
- defective fill boxes and fill pipe areas that allow product spillage,
- defective storage tank vents that have blocked or damaged piping or openings.
- defective electronic liquid measuring or leak detection equipment that does not function as intended.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

F01,F43,F82-OS1.1

1) The operator of a self-service outlet, a fuel-dispensing station or a marine fuel-dispensing station shall ensure that immediate corrective action is taken when a condition is identified that contravenes Articles 4.6.10.1. and 4.6.10.2.

I1. To limit the probability that immediate protective action would not be taken following identification of a problem, which could lead to unwanted release of liquids, which could lead to spread of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Retention of records of maintenance and inspections required in accordance with Articles 4.6.10.1. and 4.6.10.2. at a self-service outlet, a fuel-dispensing station or a marine fuel-dispensing station.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

1) Records acceptable to the authority having jurisdiction of maintenance and inspections required by Articles 4.6.10.1. and 4.6.10.2. shall be retained in conformance with Article 2.2.1.2. of Division C.

Intent

11. To state the application of Article 2.2.1.2. of Division C.
Application and intent of Division B provisions

Alberta Fire Code 2006

**Application**

A1. Portions of a property where flammable liquids or combustible liquids are received in bulk quantities and are stored or handled for the purpose of being distributed.

**Exception:**

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
Application and intent of Division B provisions

Alberta Fire Code 2006

4.7.2.1.(1)-01

Flammable liquids and combustible liquids shall be stored in:

a) closed containers, in conformance with Article 4.7.2.4., or
b) storage tanks, in conformance with Section 4.3.

Exception:

1) Flammable liquids and combustible liquids shall be stored in:
   - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
   - Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
   - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
   - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
   - the storage of aerosol products covered under Subsection 3.2.5.,
   - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
   - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
   - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

This applies to properties or portions of properties where flammable liquids or combustible liquids are received in bulk quantities and are stored or handled for the purpose of being distributed.

Exception:

except as stated in

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability of the unwanted escape of liquids or vapours from the containers, which could lead to the accumulation and subsequent ignition of the vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Application
This applies to properties or portions of properties where flammable liquids or combustible liquids are received in bulk quantities and are stored or handled for the purpose of being distributed.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent
I1. To direct Alberta Fire Code 2006 users to Article 4.7.2.4.
I2. To direct Alberta Fire Code 2006 users to Section 4.3.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Minimum distance from storage tanks to railway lines at bulk plant rail loading and unloading facilities.

This applies to properties or portions of properties where flammable liquids or combustible liquids are received in bulk quantities and are stored or handled for the purpose of being distributed.

Exception:

1) Except as stated in:
   - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
   - Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
   - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
   - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
   - the storage of aerosol products covered under Subsection 3.2.5.,
   - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
   - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
   - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
   - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that a fire involving the railway cars will spread to the storage tanks, which could lead to damage to the facility.
Application and intent of Division B provisions

Application

A1. Minimum distance from storage tanks to railway lines at bulk plant rail loading and unloading facilities.

This applies to properties or portions of properties where flammable liquids or combustible liquids are received in bulk quantities and are stored or handled for the purpose of being distributed.

Exception:

- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that a fire involving the storage tanks will spread to railway cars, which could lead to damage to the facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Minimum distance from storage tanks to railway lines at bulk plant rail loading and unloading facilities.

This applies to properties or portions of properties where flammable liquids or combustible liquids are received in bulk quantities and are stored or handled for the purpose of being distributed.

Exception:

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

1. To limit the probability that normal train operations will lead to excessive vibrations or ground settling, which could lead to the failure of the tank, which could lead to the escape of liquid, which could lead to harm to the public.
2. To limit the probability that a train derailment will lead to impact with or damage to the tank, which could lead to the failure of the tank, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Application

A1. Minimum distance from storage tanks to railway lines at bulk plant rail loading and unloading facilities.

This applies to properties or portions of properties where flammable liquids or combustible liquids are received in bulk quantities and are stored or handled for the purpose of being distributed.

Exception:

- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
Application and intent of Division B provisions

Alberta Fire Code 2006

1) Bulk storage tanks, piping, pumps, valves and associated components shall be designed, installed and maintained to accommodate hydraulic pressure shock on the system.

Exception:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”;
- appliances and their ancillary equipment within the scope of CAN/CSA-B139;
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects;
- the storage of aerosol products covered under Subsection 3.2.5.;
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act;
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act;
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

A1. Design, installation and maintenance, with respect to hydraulic pressure shocks, of bulk storage tanks, piping, pumps, valves and associated components used for flammable liquids and combustible liquids.

This applies to properties or portions of properties where flammable liquids or combustible liquids are received in bulk quantities and are stored or handled for the purpose of being distributed.

Exception: except as stated in:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants;
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”;
- appliances and their ancillary equipment within the scope of CAN/CSA-B139;
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects;
- the storage of aerosol products covered under Subsection 3.2.5.;
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act;
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act;
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

H1. To limit the probability that shock pressure will lead to the failure of the storage tanks, piping, pumps, valves or associated components, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

2) Containers for flammable liquids or combustible liquids stored outdoors shall be stored in conformance with Subsection 4.2.11., except that the distance between the piles and property lines and the distance between piles need not apply when the containers are stored in an area that does not present a hazard to neighbouring property.

Application

A1. Outdoor storage of containers for flammable liquids or combustible liquids.

This applies to properties or portions of properties where flammable liquids or combustible liquids are received in bulk quantities and are stored or handled for the purpose of being distributed.

Exception:

except that where the containers are stored in an area that does not present a hazard to neighbouring property, the distance between the piles and property lines and the distance between piles do not apply.

Exception:

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To exempt bulk plants from the requirements in Subsection 4.2.1.1 regarding the distance between the piles and property lines and the distance between piles when the containers are stored in an area that does not present a hazard to adjacent buildings or facilities.

I2. To direct Alberta Fire Code 2006 users to Subsection 4.2.1.1
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Spill control measures at outdoor flammable liquid and combustible liquid storage areas.

This applies to properties or portions of properties where flammable liquids or combustible liquids are received in bulk quantities and are stored or handled for the purpose of being distributed.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

A1. Interconnection of Class I liquid dispensing systems with dispensing systems for Class II and IIIA liquids.

This applies to properties or portions of properties where flammable liquids or combustible liquids are received in bulk quantities and are stored or handled for the purpose of being distributed.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

4.7.3.1.(1)-01

CodeText

1) Dispensing systems for Class I liquids shall not be interconnected with dispensing systems for Class II and IIIA liquids.

Intent

11. To limit the probability that Class II or IIIA liquids will become contaminated with [more volatile] Class I liquids, which could lead to the accumulation of vapour in sufficient quantity to form an ignitable mixture, which could lead to the ignition of the vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Separation – by means of fencing or an equivalent barrier – of dispensers of flammable liquids or combustible liquids, at fuel-dispensing stations serving the general public.

This applies to properties or portions of properties where flammable liquids or combustible liquids are received in bulk quantities and are stored or handled for the purpose of being distributed.

Exception:

- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

2) Where a dispenser referred to in Sentence (1) is supplied from an aboveground storage tank
a) an automatically operated valve that is designed to open only when the dispenser is being
operated shall be provided at the tank outlet, and
b) an emergency valve shall be provided for the dispenser in conformance with Sentence 4.6.6.3.

Application

A1. Automatically operated valves, that are designed to open only when a dispenser is being
operated, provided at the tank outlet, for aboveground storage tanks supplying Class I liquid
dispensers [fuel-dispensing stations] serving the general public.

This applies to properties or portions of properties where flammable liquids or combustible liquids
are received in bulk quantities and are stored or handled for the purpose of being distributed.

Exception:

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of
    Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on
    isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas
    regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas
    regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash
    points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the
    incidental storage and handling of hydrocarbon-based chemicals resulting from or used during
    crude oil or natural gas exploration, production or transmission as mandated under the scope
    of EUB Guide 55.

Intent

I1. To limit the probability that damage or rupture of the supply line to the dispenser will lead to
gravity draining of the tank, which could lead to the escape and spread of liquid, which could lead to
harm to the public.
Application and intent of Division B provisions

Application

A1. Automatically operated valves, that are designed to open only when a dispenser is being operated, provided at the tank outlet, for aboveground storage tanks supplying Class I liquid dispensers [at fuel-dispensing stations] serving the general public.

This applies to properties or portions of properties where flammable liquids or combustible liquids are received in bulk quantities and are stored or handled for the purpose of being distributed.

   - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
   - the storage of aerosol products covered under Subsection 3.2.5.,
   - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
   - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
   - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
   - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that damage or rupture of the supply line to the dispenser will lead to gravity draining of the tank, which could lead to the escape and spread of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Emergency shut-off valves in the supply line [at the base] of dispensers used for dispensing Class I liquids [at fuel-dispensing stations] serving the general public, where liquids are transferred from aboveground storage tanks to individual or multiple dispensers by pumps located elsewhere than at the dispensers.

This applies to properties or portions of properties where flammable liquids or combustible liquids are received in bulk quantities and are stored or handled for the purpose of being distributed.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

1. To expand the application of Sentence 4.6.6.3.(1).
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

CodeReference (including record number) 4.7.3.2.(3)-01

Attribution - functional statement/objective Not applicable

3) Dispensing of flammable liquids and combustible liquids at bulk plants shall be in conformance with Subsection 4.6.8.

Application

A1. Dispensing of flammable liquids and combustible liquids at bulk plants...

This applies to properties or portions of properties where flammable liquids or combustible liquids are received in bulk quantities and are stored or handled for the purpose of being distributed.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”.
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To direct Alberta Fire Code 2006 users to Subsection 4.6.8.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Dispensing and transfer of Class I liquids into metal containers or storage tanks.

This applies to properties or portions of properties where flammable liquids or combustible liquids are received in bulk quantities and are stored or handled for the purpose of being distributed.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To direct Alberta Fire Code 2006 users to Article 4.1.8.2.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Minimum horizontal distance from fill stems to aboveground storage tanks, buildings or property lines at loading or unloading facilities for tank vehicles or tank cars used for flammable liquids and combustible liquids, including at buildings for the shelter of personnel or pumps as stated in Sentence 4.7.4.1.(3).

This applies to properties or portions of properties where flammable liquids or combustible liquids are received in bulk quantities and are stored or handled for the purpose of being distributed.

Exception:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

F01-OS1.1 and F03-OS1.2

1) At a loading or unloading facility for tank vehicles or tank cars, the horizontal distance from the fill stem to an aboveground storage tank, a building or a property line shall be not less than:
   a) 7.5 m for Class I liquids, and
   b) 4.5 m for Class II and IIIA liquids.

Intent

I1. To limit the probability that an ignition source from an adjacent building, tank or facility will ignite vapours generated by the loading and unloading operations, which could lead to harm to persons in the building or facility.

I2. To limit the probability that a fire originating in the loading or unloading area will spread to adjacent buildings, tanks or facilities, which could lead to harm to persons in adjacent buildings or facilities.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Minimum horizontal distance from fill stems to aboveground storage tanks, buildings or property lines at loading or unloading facilities for tank vehicles or tank cars used for flammable liquids and combustible liquids, including at buildings for the shelter of personnel or pumps as stated in Sentence 4.7.4.1.(3).

This applies to properties or portions of properties where flammable liquids or combustible liquids are received in bulk quantities and are stored or handled for the purpose of being distributed.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

I1. To limit the probability that vapours generated by the loading and unloading operations will accumulate in or near adjacent buildings, tanks or facilities, which could lead to the ignition of the vapours from an ignition source in or near such adjacent buildings or facilities, which could lead to a fire or explosion, which could lead to damage to adjacent buildings or facilities.

I2. To limit the probability that a fire originating in the loading or unloading area will spread to adjacent buildings, tanks or facilities, which could lead to damage to adjacent buildings or facilities.
Application and intent of Division B provisions

  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent
I1. To limit the probability that a fire originating in adjacent buildings, tanks, vehicles or facilities will spread to the loading or unloading area, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Minimum distance from a loading structure to a railway line at bulk plant rail loading and unloading facilities, including at buildings for the shelter of personnel or pumps as stated in Sentence 4.7.4.1.(3).

This applies to properties or portions of properties where flammable liquids or combustible liquids are received in bulk quantities and are stored or handled for the purpose of being distributed.

Exception:

except as stated in

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that a fire involving railway cars will spread to the flammable or combustible liquid piping systems at the loading and unloading facilities, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

This applies to properties or portions of properties where flammable liquids or combustible liquids are received in bulk quantities and are stored or handled for the purpose of being distributed.

Exception:

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that a fire involving the flammable or combustible liquid piping systems at the loading and unloading facilities will spread to the railway cars, which could lead to damage to the building or facility.

2) At bulk plant rail loading and unloading facilities, the minimum distance from a loading structure to a railway line shall be in conformance with General Order No. O-32, "Flammable Liquids Bulk Storage Regulations," published by Transport Canada.

Application

A1. Minimum distance from a loading structure to a railway line at bulk plant rail loading and unloading facilities, including at buildings for the shelter of personnel or pumps as stated in Sentence 4.7.4.1.(3).

This applies to properties or portions of properties where flammable liquids or combustible liquids are received in bulk quantities and are stored or handled for the purpose of being distributed.

Exception: except as stated in

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that normal train operations will lead to excessive vibrations or ground settling, which could lead to the failure of flammable or combustible liquid piping systems at the loading and unloading facilities, which could lead to the escape of liquid, which could lead to harm to the public.

I2. To limit the probability that a train derailment will lead to impact with or damage to the flammable or combustible liquid piping systems at the loading and unloading facilities, which could lead to the failure of the piping systems, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Application

A1. Minimum distance from a loading structure to a railway line at bulk plant rail loading and unloading facilities, including at buildings for the shelter of personnel or pumps as stated in Sentence 4.7.4.1.(3).

This applies to properties or portions of properties where flammable liquids or combustible liquids are received in bulk quantities and are stored or handled for the purpose of being distributed.

Exception:

- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that normal train operations will lead to excessive vibrations or ground settling, which could lead to the failure of flammable or combustible liquid piping systems at the loading and unloading facilities, which could lead to the escape of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons.

I2. To limit the probability that a train derailment will lead to impact with or damage to the flammable or combustible liquid piping systems at the loading and unloading facilities, which could lead to the failure of the piping systems, which could lead to the escape of liquid, which could lead to the accumulation and subsequent ignition of vapour from a nearby ignition source, which could lead to harm to persons.

I3. To limit the probability that a fire involving railway cars will spread to the flammable or combustible liquid piping systems at the loading and unloading facilities, which could lead to harm to persons nearby.

I4. To limit the probability that a fire involving the flammable or combustible liquid piping systems at the loading and unloading facilities will spread to the railway cars, which could lead to harm to persons nearby.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Buildings for the shelter of personnel or pumps. This applies to properties or portions of properties where flammable liquids or combustible liquids are received in bulk quantities and are stored or handled for the purpose of being distributed.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

3) Buildings for the shelter of personnel or pumps shall be considered a part of the loading or unloading facility.

Application

A1. Buildings for the shelter of personnel or pumps.

This applies to properties or portions of properties where flammable liquids or combustible liquids are received in bulk quantities and are stored or handled for the purpose of being distributed.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
- the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

11. To define loading and unloading facilities referred to in Subsection 4.7.4.

12. To state the application of Subsection 4.7.4.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

Application

A1. Cleaning of piping and pumping systems that have been used for the transfer of either flammable liquids or combustible liquids at loading or unloading facilities. This applies to properties or portions of properties where flammable liquids or combustible liquids are received in bulk quantities and are stored or handled for the purpose of being distributed.

Exception:

- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that Class II or IIIA liquids will become contaminated with [more volatile] Class I liquids, which could lead to the accumulation of vapour in sufficient quantity to form an ignitable mixture, which could lead to the ignition of the vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Application

A1. Check valves for systems through which tank cars or tank vehicles discharge into aboveground storage tanks by means of pumps shall be provided with check valves to prevent backflow and the inadvertent mixing of liquids.

Exception:

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that liquid will backflow during transfer operations, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

A1. Check valves for systems through which tank cars or tank vehicles discharge into aboveground storage tanks by means of pumps shall be provided with check valves to prevent backflow and the inadvertent mixing of liquids.

Exception:

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

11. To limit the probability that liquid will backflow during transfer operations, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Design, installation and maintenance of systems through which tank cars or tank vehicles discharge into aboveground storage tanks by means of pumps.

This applies to properties or portions of properties where flammable liquids or combustible liquids are received in bulk quantities and are stored or handled for the purpose of being distributed.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

A1. Control valves for filling tank vehicles or tank cars with flammable liquids or combustible liquids.

This applies to properties or portions of properties where flammable liquids or combustible liquids are received in bulk quantities and are stored or handled for the purpose of being distributed.

Exception:

except as stated in

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that liquid will leak or spill during or between transfer operations, which could lead to harm to the public.
Application and intent of Division B provisions

A1. Control valves for filling tank vehicles or tank cars with flammable liquids or combustible liquids.

This applies to properties or portions of properties where flammable liquids or combustible liquids are received in bulk quantities and are stored or handled for the purpose of being distributed.

Exception:

- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

1) Valves installed to control the filling of tank vehicles or tank cars shall be of the self-closing type.

Intent

I1. To limit the probability that liquid will leak or spill during or between transfer operations, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Application
A1. Method of holding control valves open, for systems used for filling tank vehicles or tank cars with flammable liquids or combustible liquids.

This applies to properties or portions of properties where flammable liquids or combustible liquids are received in bulk quantities and are stored or handled for the purpose of being distributed.

Exception:
except where automatic devices are provided for shutting off the flow when the vehicle is full or filled to a preset amount.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent
I1. To limit the probability that an inadequate control of dispensing operations will lead to an unwanted escape of liquid, which could lead to harm to the public.

I2. To limit the probability that overfilling of tank vehicles or tank cars will lead to the unwanted escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

2) Control valves referred to in Sentence (1) shall be held open manually, except where automatic devices are provided for shutting off the flow in order to prevent the overfilling of tank vehicle or tank car compartments. (See Appendix A.)

Application

A1. Method of holding control valves open, for systems used for filling tank vehicles or tank cars with flammable liquids or combustible liquids.

This applies to properties or portions of properties where flammable liquids or combustible liquids are received in bulk quantities and are stored or handled for the purpose of being distributed.

Exception:

except where automatic devices are provided for shutting off the flow when the vehicle is full or filled to a preset amount.

Exception:

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that an inadequate control of dispensing operations will lead to an unwanted escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.

I2. To limit the probability that overfilling of tank vehicles or tank cars will lead to the unwanted escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Protection against static charges during the loading and unloading of tank vehicles or tank cars when transferring flammable liquids or combustible liquids.

This applies to properties or portions of properties where flammable liquids or combustible liquids are received in bulk quantities and are stored or handled for the purpose of being distributed.

A2. This also applies to the loading and unloading of any tank vehicle [not only at bulk plants], as stated in Sentence 4.11.3.3.(1).

Exception:

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

1. To limit the probability that static electric charges will build up, which could lead to the ignition of nearby vapour, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Bonding and grounding of railway tracks [as a means of protection against the accumulation of static charges, as required by Sentence 4.7.4.5.(1)], where flammable liquids or combustible liquids are transferred into or from railway tank cars.

This applies to properties or portions of properties where flammable liquids or combustible liquids are received in bulk quantities and are stored or handled for the purpose of being distributed.

A2. This also applies to the loading and unloading of any tank vehicle [not only at bulk plants], as stated in Sentence 4.11.3.3.(1).

Exception:

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that static electric charges will build up, which could lead to the ignition of nearby vapour, which could lead to harm to persons.

I2. To limit the probability that a distant lighting strike will travel through the rails, which could lead to the creation of a source of ignition, which could lead to the ignition of nearby vapour, which could lead to harm to persons.
Application and intent of Division B provisions

### Application

**A1.** Bonding [as a means of protection against the accumulation of static charges, as required by Sentence 4.7.4.5.(1)] during the loading or unloading of flammable liquids or combustible liquids to or from tank vehicles or railway tank cars.

This applies to properties or portions of properties where flammable liquids or combustible liquids are received in bulk quantities and are stored or handled for the purpose of being distributed.

**A2.** This also applies to the loading and unloading of any tank vehicle [not only at bulk plants], as stated in Sentence 4.11.3.3.(1).

**Exception:**
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

### Intent

**I1.** To limit the probability that static electric charges will build up, which could lead to the ignition of nearby vapour, which could lead to harm to persons.

**I2.** To direct Alberta Fire Code 2006 users to Subsection 4.1.4. for requirements relating to electrical equipment.

4) Bonding wires for tank vehicles shall be provided with a pull-off connector attached so as to be in electrical contact with the cargo tank of the tank vehicle.

**Application**

A1. Bonding (as a means of protection against static charges accumulation required in Sentence 4.7.4.5.(1)) during the flammable liquid or combustible liquid loading of tank vehicles.

This applies to properties or portions of properties where flammable liquids or combustible liquids are received in bulk quantities and are stored or handled for the purpose of being distributed.

A2. This also applies to loading and unloading of any tank vehicle [not only at bulk plants], as stated in Sentence 4.11.3.3.1(1).

**Exception:** except as stated in

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to

 - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

**Intent**

I1. To limit the probability that static electric charges will build up, which could lead to the ignition of nearby vapour, which could lead to harm to persons.

5) The bonding connection required in Sentence (1) shall be fixed to the tank vehicle or storage tank before dome covers are raised and shall remain in place until filling is completed and all dome covers have been closed and secured.

Application

A1. Bonding [as a means of protection against static charges accumulation required in Sentence 4.7.4.5.(1)] during the flammable liquid or combustible liquid loading of tank vehicles.

This applies to properties or portions of properties where flammable liquids or combustible liquids are received in bulk quantities and are stored or handled for the purpose of being distributed.

A2. This also applies to loading and unloading of any tank vehicle [not only at bulk plants], as stated in Sentence 4.11.3.3.(1).

Exception:

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquified petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

1. To limit the probability that static electric charges will build up, which could lead to the ignition of nearby vapour, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

A1. Filling of tank vehicles or tank cars with Class I or II liquids through the top of the tank. This applies to properties or portions of properties where flammable liquids or combustible liquids are received in bulk quantities and are stored or handled for the purpose of being distributed.

Exception: except as stated in
- Sentence 4.1.11.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.11.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent
I1. To limit the probability that the free-fall or splashing of liquid as it enters the tank will lead to the buildup of static electric charges, which could lead to the ignition of vapour, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Placards posted at areas used for the transfer of flammable liquids and combustible liquids at bulk plants.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants;
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations";
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5., liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

F12-OS1.1,OS1.2 and F81-OS1.1

Attribution - functional statement/objective

4.7.4.7.(1)-01

Date

Intent

I1. To limit the probability that sources of ignition would be inadvertently introduced to a location containing flammable liquids or combustible liquids, which could lead to the ignition of vapour from spilled product, which could lead to spread of fire to nearby buildings and facilities, which could lead to harm to persons.

I2. To limit the probability that products incompatible with flammable liquids or combustible liquids would be stored or inadvertently introduced to a location containing flammable liquids or combustible liquids, which could lead to fire spreading to containers or to spilled product, which could lead to spread of fire to nearby buildings and facilities, which could lead to harm to persons.

I3. To limit the probability that a lack of posted information relating to action to be taken in an emergency would lead to delays in initiating an appropriate emergency response, which could lead to delays in fire fighting operations, which could lead to spread of fire, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.7.4.7.(1)-02
Attribution - functional statement/objective F12.F81-0S3.4

Application

A1. Placards posted at areas used for the transfer of flammable liquids and combustible liquids at bulk plants.

Exception:

except as stated in:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to:
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that a lack of posted information relating to procedures to be followed would result in malfunction or damage involving piping and other equipment, which could lead to unwanted release of liquid, which could lead to contact with hazardous substances, which could lead to harm to persons.

I2. To limit the probability that a lack of posted information relating to procedures to be followed during an emergency would lead to delays in initiating an appropriate emergency response, which could lead to unwanted release of liquid, which could lead to contact with hazardous substances, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Minimum number and rating of portable extinguishers at hazardous locations in bulk storage plants for flammable liquids or combustible liquids.

This applies to properties or portions of properties where flammable liquids or combustible liquids are received in bulk quantities and are stored or handled for the purpose of being distributed.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

1. At least 2 portable extinguishers, each having a rating of not less than 40-B:C, shall be provided at hazardous locations in bulk storage plants for flammable liquids and combustible liquids, except that such portable extinguishers are permitted to be provided from the tank vehicles operated as part of a bulk plant that is not fenced.

(See Appendix A.)

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that fire suppression operations using portable extinguishers will be delayed or ineffective in controlling or suppressing the fire, which could lead to the spread of fire, which could lead to damage to the building or facility.

I2. To supersede the general provisions stated in Article 2.1.5.1. regarding the number and rating of portable extinguishers.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Minimum number and rating of portable extinguishers at hazardous locations in bulk storage plants for flammable liquids or combustible liquids.

This applies to properties or portions of properties where flammable liquids or combustible liquids are received in bulk quantities and are stored or handled for the purpose of being distributed.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

A1. Minimum number and rating of portable extinguishers at hazardous locations in bulk storage plants for flammable liquids or combustible liquids.

This applies to properties or portions of properties where flammable liquids or combustible liquids are received in bulk quantities and are stored or handled for the purpose of being distributed.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that fire suppression operations using portable extinguishers will be delayed or ineffective in controlling or suppressing the fire, which could lead to the spread of fire, which could lead to harm to persons.

I2. To supersede the general provisions stated in Article 2.1.5.1. regarding the number and rating of portable extinguishers.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Minimum number and rating of portable extinguishers at hazardous locations in bulk storage plants for flammable liquids and combustible liquids, including those provided from tank vehicles operated as part of a bulk plant that is not fenced.

Exception:

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

1. To waive the requirement for the portable extinguishers to be provided at hazardous locations throughout a site that is not fenced provided the portable extinguishers are carried on tank vehicles operated as part of the bulk plant.
Facilities to control possible spills of flammable liquids or combustible liquids shall be provided at loading and unloading points, in conformance with Subsection 4.1.6.

Application

A1. Facilities to control possible spills of flammable liquids or combustible liquids at loading and unloading points.

This applies to properties or portions of properties where flammable liquids or combustible liquids are received in bulk quantities and are stored or handled for the purpose of being distributed.

Exception:

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139, the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5., liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.8.1.1.(1)-01
Attribution - functional statement/objective Not applicable

CodeText

1) This Section applies to flammable liquid and combustible liquid installations on piers and wharves, but does not include marine fuel-dispensing stations.

Application

A1. Flammable liquid and combustible liquid installations on piers and wharves.

Exception:
- except as stated in
- Section 4.6., which applies to marine fuel-dispensing stations,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

H. To state the application of Section 4.8.
Application and intent of Division B provisions

Alberta Fire Code 2006

A.1. Minimum distance from piers and wharves to
- bridges over navigable waterways, and
- entrances to superstructures of vehicular or railroad tunnels under waterways.

This applies to piers and wharves at which cargos of flammable liquids or combustible liquids are transferred in bulk quantities to or from tanks of marine vessels.

Exception:
- except as stated in
  - Section 4.6., which applies to marine fuel-dispensing stations,
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
    - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

A1. Minimum distance from piers and wharves to
- bridges over navigable waterways, and
- entrances to superstructures of vehicular or railroad tunnels under waterways.

This applies to piers and wharves at which cargos of flammable liquids or combustible liquids are transferred in bulk quantities to or from tanks of marine vessels.

Exception:
- except as stated in
  - Section 4.6., which applies to marine fuel-dispensing stations,
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
    - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I. To limit the probability that a fire or explosion involving the pier or wharf operations will lead to damage to adjacent buildings or facilities.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.8.2.1.(1)-02
Attribution - functional statement/objective F03-OS1.2

Application

A1. Minimum distance from piers and wharves to
- bridges over navigable waterways, and
- entrances to superstructures of vehicular or railroad tunnels under waterways.

This applies to piers and wharves at which cargos of flammable liquids or combustible liquids are transferred in bulk quantities to or from tanks of marine vessels.

Exception:
- except as stated in
  - Section 4.6., which applies to marine fuel-dispensing stations,
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
    - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that a fire or explosion involving the pier or wharf operations will lead to harm to persons in vehicles or rail cars using nearby bridges or tunnels.
Application and intent of Division B provisions

A1. Minimum distance of the termination of fixed piping for loading and unloading flammable liquids or combustible liquids shall be not less than 60 m from a bridge or from an entrance to a tunnel.

This applies to piers and wharves that have flammable liquid or combustible liquid installations.

Exception: except as stated in
- Section 4.6., which applies to marine fuel-dispensing stations,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
2) The termination of fixed piping for loading and unloading flammable liquids or combustible liquids shall be not less than 60 m from a bridge or from an entrance to a tunnel.

Exception:
- Section 4.6., which applies to marine fuel-dispensing stations,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

11. To limit the probability that a fire or explosion involving the pier or wharf operations will lead to harm to persons in vehicles or rail cars using nearby bridges or tunnels.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Design and construction of substructures and decks. This applies to piers and wharves that have flammable liquid or combustible liquid installations.

Exception: Except as stated in
- Section 4.6., which applies to marine fuel-dispensing stations,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

F20,F04,F80-OH5

Application
1) The substructure and deck of a pier or wharf shall be designed for its intended use and shall be constructed of heavy timber or material that will provide adequate flexibility, resistance to shock, durability, strength and fire resistance.

4.8.2.2.(1)-01

Attribution - functional statement/objective

I1. To limit the probability that the substructure or deck will fail under normal or fire conditions, which could lead to failure of flammable and combustible liquid installations, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Text

This applies to piers and wharves that have flammable liquid or combustible liquid installations.

Exception:
except as stated in
- Section 4.6., which applies to marine fuel-dispensing stations,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

F20,F04,F80-OP1.1

Application

This applies to piers and wharves that have flammable liquid or combustible liquid installations.

Exception:
except as stated in
- Section 4.6., which applies to marine fuel-dispensing stations,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

11. To limit the probability that the substructure or deck will fail under normal or fire conditions, which could lead to failure of flammable and combustible liquid installations, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Application

This applies to piers and wharves that have flammable liquid or combustible liquid installations.

Exception:

- except as stated in
  - Section 4.6., which applies to marine fuel-dispensing stations,
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

1. Installation on shore of storage tanks associated with piers and wharves.

Exception:
- except as stated in
  - Sentence 4.8.3.1.(2), which applies to liquid storage tanks inside buildings at solid-fill piers and wharves or piers and wharves of noncombustible construction,
  - Sentence 4.8.3.1.(3), which applies to underground liquid storage tanks at solid-fill piers and wharves,
  - Section 4.6., which applies to marine fuel-dispensing stations,
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

1. To limit the probability that the substructure or deck will fail under normal or fire conditions, which could lead to failure of the storage tank or associated piping, which could lead to the escape of liquid, which could lead to harm to the public.

1) Except as permitted in Sentences (2) and (3), storage tanks shall be installed on shore in conformance with Subsections 4.3.2. to 4.3.7.

Application
A1. Installation on shore of storage tanks associated with piers and wharves.

Exception:
except as stated in
- Sentence 4.8.3.1.(2), which applies to liquid storage tanks inside buildings at solid-fill piers and wharves or piers and wharves of noncombustible construction,
- Sentence 4.8.3.1.(3), which applies to underground liquid storage tanks at solid-fill piers and wharves,
- Section 4.6., which applies to marine fuel-dispensing stations,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent
I1. To limit the probability that the substructure or deck will fail under normal or fire conditions, which could lead to failure of the storage tank or associated piping, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application of provisions

A1. Installation on shore of storage tanks associated with piers and wharves.

Exception:

1) Except as permitted in Sentences (2) and (3), storage tanks shall be installed on shore in conformance with Subsections 4.3.2. to 4.3.7.

Not applicable

Application

A1. Installation on shore of storage tanks associated with piers and wharves.

Exception:

1) Except as permitted in Sentences (2) and (3), storage tanks shall be installed on shore in conformance with Subsections 4.3.2. to 4.3.7.

Not applicable

Application

A1. Installation on shore of storage tanks associated with piers and wharves.

Exception:

1) Except as permitted in Sentences (2) and (3), storage tanks shall be installed on shore in conformance with Subsections 4.3.2. to 4.3.7.

Not applicable

Application
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

CodeReference (including record number) 4.8.3.1.(2)-01

2) Storage tanks are permitted to be located in buildings on piers and wharves of solid-fill or noncombustible construction provided they conform to Subsections 4.3.12. to 4.3.14.

Application

A1. Storage tanks located in buildings on piers and wharves of solid-fill or noncombustible construction that have flammable liquid or combustible liquid installations.

Exception:
- except as stated in
  - Section 4.6., which applies to marine fuel-dispensing stations,
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
    - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To supersede the requirements of Sentence 4.8.3.1.(1) and permit storage tanks to be located in buildings on piers and wharves, if certain conditions are met [the piers or wharves are of solid-fill or noncombustible construction, and the tank installation conforms to Subsections 4.3.12. to 4.3.14.].

This is to limit the probability that
- the substructure or deck will fail under normal or fire conditions, which could lead to failure of the storage tank or associated piping, which could lead to the escape of liquid, which could lead to harm to the public, and
- there will be an unwanted release of liquid from the storage tanks, which could lead to harm to the public.

I1. To supersede the requirements of Sentence 4.8.3.1.(1) and permit storage tanks to be buried in piers and wharves, if certain conditions are met [the piers or wharves are of solid-fill and the tank installation conforms to Subsections 4.3.8. to 4.3.11.

This is to limit the probability that
- the substructure or deck will fail under normal or fire conditions, which could lead to failure of the storage tank or associated piping, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons, and
- there will be an unwanted release of liquid and vapours from the storage tanks, which could lead to the ignition of the vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Method of installation and materials used for piping, valves and fittings for flammable liquid and combustible liquid installations at piers and wharves.

Exception:
- Section 4.6., which applies to marine fuel-dispensing stations,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

Not applicable

Intent

I1. To expand the application of Section 4.5. [specifically those provisions in Section 4.5. that relate to the “method of installation and materials”].
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

1. Support and arrangement of piping for flammable liquid and combustible liquid installations at piers and wharves.

A1. Support and arrangement of piping for flammable liquid and combustible liquid installations at piers and wharves.

Exception:
- except as stated in
  - Section 4.6., which applies to marine fuel-dispensing stations,
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”.
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that piping and connected equipment will be subject to excessive vibration or strain, which could lead to the development of cracks or breakage, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

Application

A1. Support and arrangement of piping for flammable liquid and combustible liquid installations at piers and wharves.

Exception:

except as stated in:
- Section 4.6., which applies to marine fuel-dispensing stations,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations”.
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that piping and connected equipment will be subject to excessive vibration or strain, which could lead to the development of cracks or breakage, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

A1. Support and arrangement of piping for flammable liquid and combustible liquid installations at piers and wharves.

Exception: except as stated in
- Section 4.6., which applies to marine fuel-dispensing stations,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

A1. Signage and access openings for below deck pipeline connections and shut-off valves [required in Article 4.8.4.5.] for pipelines supplying flammable liquids and combustible liquids from shore to piers and wharves that have installations for flammable liquids or combustible liquids.

Exception:

- except as stated in - Section 4.6., which applies to marine fuel-dispensing stations,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability of delays in shutting off the flow of liquid in an emergency situation [a fire involving the liquid], which could lead to the escape of liquid not being minimized, which could lead to the spread of fire, which could lead to damage to the building or facility.

I2. To limit the probability of delays in shutting off the flow of liquid in an emergency situation [a liquid spill incident], which could lead to the spread of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.

I3. To limit the probability that inadequate inspection and maintenance will lead to the unwanted escape of liquid, which could lead to the spread of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Signage and access openings for below deck pipeline connections and shut-off valves [required in Article 4.8.4.5.] for pipelines supplying flammable liquids and combustible liquids from shore to piers and wharves that have installations for flammable liquids or combustible liquids.

Exception:
- except as stated in Section 4.6., which applies to marine fuel-dispensing stations,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

1) Piping systems shall be tested for leakage in conformance with Section 4.4. before being put into service and before reactivation when used on a seasonal basis.

Application

A1. Method of leakage testing for flammable liquid and combustible liquid piping systems, at the following times
- before being put into service, and
- before reactivation when used on a seasonal basis.

This applies to piers and wharves that have installations for flammable liquids or combustible liquids.

Exception:
- except as stated in
  - Section 4.6., which applies to marine fuel-dispensing stations,
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

11. To expand the application of Section 4.1.1
Application and intent of Division B provisions

Application

A1. Frequency of leakage testing [to be done in conformance with a method described in Subsection 4.4.1.] for underground flammable liquid and combustible liquid piping systems.

This applies to piers and wharves that have installations for flammable liquids or combustible liquids.

Exception:

except as stated in
- Section 4.6., which applies to marine fuel-dispensing stations,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that leaks in underground piping systems will not be identified and corrected, which could lead to the spread of liquid, which could lead to harm to the public.

I2. To expand the application of Article 4.4.1.1.
Application and intent of Division B provisions

- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent
I1. To limit the probability that static electric charges will build up, which could lead to the ignition of nearby vapour, which could lead to harm to persons.

I2. To limit the probability that a distant lighting strike will travel through the rails, which could lead to a source of ignition, which could lead to the ignition of nearby vapour, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Insulating joints in railway tracks where entering upon a pier or wharf that has installations for flammable liquids or combustible liquids.

Exception:

- except as stated in
  - Section 4.6., which applies to marine fuel-dispensing stations,
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

II. To limit the probability that stray currents originating from shoreside installations will travel through the rails, which could lead to buildup of static electric charges, which could lead to the ignition of nearby vapour, which could lead to harm to persons.
Application and intent of Division B provisions

This applies to piers and wharves that have Class I liquid pumps and fuel dispensers.

Exception:
- Section 4.6., which applies to marine fuel-dispensing stations,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

I1. To limit the probability that fire suppression operations using portable extinguishers will be delayed, or ineffective in controlling or suppressing a fire, which could lead to the spread of fire, which could lead to damage to the building or facility.

I2. To override general provisions for the location and rating of portable extinguishers in Article 2.1.5.1. and Sentence 6.2.1.1.(1).
Application and intent of Division B provisions

This applies to piers and wharves that have Class I liquid pumps or fuel dispensers.

Exception:

- Section 4.6., which applies to marine fuel-dispensing stations,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

  - the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act.
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

F12-OS1.2

2) Portable extinguishers shall be kept in the pump house or other suitable location where they will be accessible in the event of an emergency, but not accessible to the public.

Intent

11. To limit the probability that fire suppression operations using portable extinguishers will be delayed, which could lead to the spread of fire, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Location [so they are not accessible to the public] of portable extinguishers at piers and wharves that have flammable liquid or combustible liquid installations.

Exception:
- except as stated in
  - Section 4.6., which applies to marine fuel-dispensing stations,
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
    - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

2) Portable extinguishers shall be kept in the pump house or other suitable location where they will be accessible in the event of an emergency, but not accessible to the public.

Intent

I1. To limit the probability that portable extinguishers will be stolen or tampered with, which could lead to fire suppression operations [using portable extinguishers] being delayed, or ineffective in controlling or suppressing a fire, which could lead to the spread of fire, which could lead to damage to the building or facility.
A1. Location (so they are not accessible to the public) of portable extinguishers at piers and wharves that have flammable liquid or combustible liquid installations.

Exception: except as stated in
- Section 4.6., which applies to marine fuel-dispensing stations,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent
11. To limit the probability that portable extinguishers will be stolen or tampered with, which could lead to fire suppression operations [using portable extinguishers] being delayed, or ineffective in controlling or suppressing a fire, which could lead to the spread of fire, which could lead to harm to persons.
Application and intent of Division B provisions

A1. Minimum rating and location of portable extinguishers at piers and wharves where vessels are loading or unloading flammable liquids or combustible liquids or are being refuelled.

Exception: except as stated in
- Section 4.6., which applies to marine fuel-dispensing stations,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent
I1. To limit the probability that fire suppression operations using portable extinguishers will be delayed, or ineffective in controlling or suppressing a fire, which could lead to the spread of fire, which could lead to damage to the building or facility.
Application and intent of Division B provisions

A. Minimum rating and location of portable extinguishers at piers and wharves where vessels are loading or unloading flammable liquids or combustible liquids or are being refuelled.

Exception:
- except as stated in Section 4.6., which applies to marine fuel-dispensing stations,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

4) Portable extinguishers provided in conformance with Sentence (3) shall be in addition to those provided on board the marine vessels.

Application

A1. Number of portable extinguishers at piers and wharves where vessels are loading or unloading flammable liquids or combustible liquids or are being refuelled.

Exception:

except as stated in
- Section 4.6., which applies to marine fuel-dispensing stations,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To clarify that portable extinguishers on board the vessels shall not be counted in determining the extinguishers required in Sentence 4.8.6.1.(3).
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Training of operating personnel with respect to the summoning of the nearest fire department in the event of fire.

This applies to piers and wharves that have flammable liquid or combustible liquid installations.

Exception: except as stated in
- Section 4.6., which applies to marine fuel-dispensing stations,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,

Application and intent of Division B provisions

Application
A1. General purpose piers and wharves used for the bulk transfer of flammable liquids or combustible liquids, where
- it is not practicable to locate such bulk transfer stations on separate piers and wharves, and
- guards or fences are installed around valves or pumping equipment to prevent entry of unauthorized personnel.

Exception:
- except as stated in
  - Sentence 4.6., which applies to marine fuel-dispensing stations,
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. General purpose piers and wharves used for the bulk transfer of flammable liquids or combustible liquids, where
- it is not practicable to locate such bulk transfer stations on separate piers and wharves, and
- guards or fences are installed around valves or pumping equipment to prevent entry of unauthorized personnel.

Exception:
except as stated in
- Section 4.6., which applies to marine fuel-dispensing stations,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To supersede the requirements of Sentence 4.8.7.1.(1) in order to permit bulk transfer operations on general purpose piers and wharves if certain measures are taken [guards or fences are installed around valves or pumping equipment to prevent entry of unauthorized personnel].

This is to limit the probability that unauthorized persons will gain access to the valves and pumping equipment, which could lead to the unwanted escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to a fire or explosion, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. General purpose piers and wharves used for the bulk transfer of flammable liquids or combustible liquids, where
- it is not practicable to locate such bulk transfer stations on separate piers and wharves, and
- guards or fences are installed around valves or pumping equipment to prevent entry of unauthorized personnel.

Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Spill control measures for flammable liquid and combustible liquid hose couplings at piers and wharves used for the bulk transfer of flammable liquids or combustible liquids.

Exception:
- Section 4.6., which applies to marine fuel-dispensing stations,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To direct Alberta Fire Code 2006 users to Subsection 4.1.6.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

Application

A1. Spill prevention measures during disconnection of flammable liquid and combustible liquid hoses at piers and wharves used for the bulk transfer of flammable liquids or combustible liquids.

Exception:

- except as stated in
  - Section 4.6., which applies to marine fuel-dispensing stations,
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

1. To limit the probability of the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Spill prevention measures during disconnection of flammable liquid and combustible liquid hoses at piers and wharves used for the bulk transfer of flammable liquids or combustible liquids.

Exception:

- except as stated in Section 4.6., which applies to marine fuel-dispensing stations,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability of the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Type of hose connection [bolted flange type] on flammable liquid and combustible liquid piping at piers and wharves used for the bulk transfer of flammable liquids or combustible liquids.

Exception:
except as stated in
- Sentence 4.8.7.3.(2), which applies to cam-locking connections up to 100 mm in size,
- Section 4.6., which applies to marine fuel-dispensing stations,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

F22,F43-OH5

Attribution - functional statement/objective

1) Except as provided in Sentence (2), hose connections on piping shall be of the bolted flange type, and all such connections shall be provided with shut-off valves.

Intent

I1. To limit the probability that hose connections will loosen from normal operations, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

A1. Type of hose connection [bolted flange type] on flammable liquid and combustible liquid piping at piers and wharves used for the bulk transfer of flammable liquids or combustible liquids.

Exception:
- except as stated in Sentence 4.8.7.3.(2), which applies to cam-locking connections up to 100 mm in size,
- Section 4.6., which applies to marine fuel-dispensing stations,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to:
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent
11. To limit the probability that hose connections will loosen from normal operations, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Type of hose connection [bolted flange type] on flammable liquid and combustible liquid piping at piers and wharves used for the bulk transfer of flammable liquids or combustible liquids.

- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”.
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

11. To limit the probability that hose connections will loosen from normal operations, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Shut-off valves at hose connections on flammable liquid and combustible liquid piping at piers and wharves used for the bulk transfer of flammable liquids or combustible liquids.

Exception:

except as stated in
- Sentence 4.8.7.3.(2), which applies to cam-locking connections up to 100 mm in size,
- Section 4.6., which applies to marine fuel-dispensing stations,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

A1. Shut-off valves at hose connections on flammable liquid and combustible liquid piping at piers and wharves used for the bulk transfer of flammable liquids or combustible liquids.

Intent

11. To limit the probability of delays in shutting off the flow of liquid in a liquid spill situation, which could lead to the spread of liquid, which could lead to harm to the public.
Application and intent of Division B provisions
Alberta Fire Code 2006

Application
A1. Shut-off valves at hose connections on flammable liquid and combustible liquid piping at piers and wharves used for the bulk transfer of flammable liquids or combustible liquids.

- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

11. To limit the probability that marine vessels will impact and physically damage hose connections, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.8.8.1.(1)-01

Attribution - functional statement/objective F81,F20,F22-OH5

CodeText

1) The transfer of flammable liquids or combustible liquids between tanks of marine vessels and piers or wharves shall be through
   a) flexible cargo hose designed in conformance with good engineering practice (see Appendix A), or
   b) jointed tubing or piping
   i) suitable for the cargo to be transferred, and
   ii) designed to withstand the maximum design working pressure.

Application

A1. Flexible cargo hose, jointed tubing and piping used for the transfer of flammable liquids or combustible liquids between the tanks of marine vessels and piers or wharves that have installations for flammable liquids or combustible liquids.

Exception:
except as stated in
- Section 4.6., which applies to marine fuel-dispensing stations,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that working pressure, incompatibility of materials, movement, impact or vibrations will lead to the failure of the piping or hose, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

I1. To limit the probability that the piping or hose will fail from normal use and operations, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Application

A1. Support of cargo hose used for the transfer of flammable liquids or combustible liquids between tank vessels and piers or wharves, where the hose is not run on a solid foundation.

This applies to piers and wharves that have flammable liquid or combustible liquid installations.

Exception: except as stated in
- Section 4.6., which applies to marine fuel-dispensing stations,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that the cargo hose and connected equipment will be subjected to excessive vibration or strain, which could lead to the development of cracks or breakage, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Support of cargo hose used for the transfer of flammable liquids or combustible liquids between tank vessels and piers or wharves, where the hose is not run on a solid foundation.

This applies to piers and wharves that have flammable liquid or combustible liquid installations.

Exception:
- except as stated in Section 4.6., which applies to marine fuel-dispensing stations,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent
11. To limit the probability that the cargo hose and connected equipment will be subjected to excessive vibration or strain, which could lead to the development of cracks or breakage, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Support of cargo hose used for the transfer of flammable liquids or combustible liquids between tank vessels and piers or wharves, where the hose is not run on a solid foundation. This applies to piers and wharves that have flammable liquid or combustible liquid installations.

Exception:
except as stated in
- Section 4.6., which applies to marine fuel-dispensing stations,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Pressure relief devices on cargo pumps that are capable of producing pressures in excess of the safe working pressure of cargo hose shall be provided with pressure relief devices such as return lines or relief valves.

Exception:
- Section 4.6., which applies to marine fuel-dispensing stations,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

This applies to cargo pumps used for the transfer of flammable liquids or combustible liquids at piers and wharves that have flammable liquid or combustible liquid installations.

Intent

I1. To limit the probability that the cargo hose and connected equipment will be subjected to excessive pressures, which could lead to the failure of the hose, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Pressure relief devices on cargo pumps that are capable of producing pressures in excess of the safe working pressure of the cargo hose shall be provided with pressure relief devices such as return lines or relief valves.

Application

This applies to cargo pumps used for the transfer of flammable liquids or combustible liquids at piers and wharves that have flammable liquid or combustible liquid installations.

Exception:

- except as stated in:
  - Section 4.6., which applies to marine fuel-dispensing stations,
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”.
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that the cargo hose and connected equipment will be subjected to excessive pressures, which could lead to the failure of the hose, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Pressure relief devices on cargo pumps that are capable of producing pressures in excess of the safe working pressure of the cargo hose shall be provided with pressure relief devices such as return lines or relief valves.

This applies to cargo pumps used for the transfer of flammable liquids or combustible liquids at piers and wharves that have flammable liquid or combustible liquid installations.

Exception:

- except as stated in - Section 4.6., which applies to marine fuel-dispensing stations,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that the cargo hose and connected equipment will be subjected to excessive pressures, which could lead to the failure of the hose, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Location of cargo pumps used for the transfer of flammable liquids or combustible liquids at piers and wharves that have flammable liquid or combustible liquid installations.

Exception:
- except as stated in
  - Sentence 4.8.9.2.(2), which applies where it is not practicable to install cargo pumps as required in this Sentence [Sentence 4.8.9.2.(1)],
  - Section 4.6., which applies to marine fuel-dispensing stations,
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
    - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

11. To limit the probability that a fire involving the cargo pump will spread to other parts of the pier or wharf, which could lead to damage to the building or facility.
Application and intent of Division B provisions

I1. To limit the probability that a fire involving the cargo pump will spread to adjacent buildings or structures, which could lead to damage to adjacent buildings or facilities.

I2. To limit the probability that leakage from the pump operations will spread liquid to adjacent buildings or facilities, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to adjacent buildings or facilities.

I3. To limit the probability that an ignition source from adjacent buildings or facilities will ignite vapour from the pump, which could lead to a fire or explosion, which could lead to damage to adjacent buildings or facilities.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Pump houses for cargo pumps used for the transfer of flammable liquids or combustible liquids, where it is not practicable to install cargo pumps as required in Sentence 4.8.9.2.(1). This applies to piers and wharves that have flammable liquid or combustible liquid installations.

Exception:

- Section 4.6., which applies to marine fuel-dispensing stations,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139.
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

11. To supersede the requirements of Sentence 4.8.9.2.(1) and permit the installation of cargo pumps on piers or wharves of combustible construction if certain measures are taken [pumps are located in pump houses conforming to Subsection 4.8.10., and located not less than 3 m from other buildings].

This is to limit the probability that

- liquid spillage or leakage will not be contained, which could lead to the spread of liquid outside of the pump house and to adjacent buildings and facilities, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to adjacent buildings and facilities,
- a fire involving the pump house will spread to adjacent buildings and facilities, which could lead to damage to adjacent buildings and facilities, and
- leakage or spillage from the pump operations will spread liquid to adjacent buildings and facilities, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to adjacent buildings and facilities.
Application and intent of Division B provisions

Alberta Fire Code 2006

Code/Reference (including record number) 4.8.9.2.02
Attribution - functional statement/objective F44,F02,F03,F01-OS1.1,OS1.2

CodeText

2) Where it is not practicable to install cargo pumps as required in Sentence (1), they are permitted to be installed on piers and wharves of combustible construction if located in pump houses a) conforming to Subsection 4.8.10., and b) located not less than 3 m from other buildings.

Application

A1. Pump houses for cargo pumps used for the transfer of flammable liquids or combustible liquids, where it is not practicable to install cargo pumps as required in Sentence 4.8.9.2.(1).

This applies to piers and wharves that have flammable liquid or combustible liquid installations.

Exception:

except as stated in
- Section 4.6., which applies to marine fuel-dispensing stations,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

11. To supersede the requirements of Sentence 4.8.9.2.(1) and permit the installation of cargo pumps on piers or wharves of combustible construction if certain measures are taken (pumps are located in pump houses conforming to Subsection 4.8.10., and located not less than 3 m from other buildings).

This is to limit the probability that:
- liquid spillage or leakage will not be contained, which could lead to the spread of liquid outside of the pump house, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons, a fire involving the pump and immediate area will spread to involve the pump house, which could lead to the spread of fire to other parts of the pier or wharf, which could lead to harm to persons, a fire involving the pump house will spread to adjacent buildings or structures, which could lead to harm to persons in the adjacent building or facility, leakage or spillage from the pump operations will spread liquid to an adjacent property, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons in the adjacent building or facility, and an ignition source in an adjacent property will ignite vapour from the pump, which could lead to harm to persons in the building.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Pump houses for cargo pumps used for the transfer of flammable liquids or combustible liquids, where it is not practicable to install cargo pumps as required in Sentence 4.8.10., and b) located not less than 3 m from other buildings. This applies to piers and wharves that have flammable liquid or combustible liquid installations.

Exception:
- except as stated in Section 4.6., which applies to marine fuel-dispensing stations,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent
- I1. To direct Alberta Fire Code 2006 users to Subsection 4.8.10.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Type of construction of pump houses for cargo pumps used for the transfer of flammable liquids or combustible liquids. This applies to piers and wharves that have flammable liquid or combustible liquid installations.

Exception:
- except as stated in Section 4.6., which applies to marine fuel-dispensing stations,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent
I1. To limit the probability that a fire in the pump house will spread to other parts of the pier or wharf, which could lead to damage to adjacent buildings and facilities.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Type of construction of pump houses for cargo pumps used for the transfer of flammable liquids or combustible liquids.

This applies to piers and wharves that have flammable liquid or combustible liquid installations.

Exception:
- except as stated in Section 4.6., which applies to marine fuel-dispensing stations,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

F02-OS1.2

I1. To limit the probability that a fire in the pump house will spread to other parts of the pier or wharf, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Construction of floors [spill control and containment] at pump houses for cargo pumps used for the transfer of flammable liquids or combustible liquids.

This applies to piers and wharves that have flammable liquid or combustible liquid installations.

Exception: except as stated in
- Section 4.6., which applies to marine fuel-dispensing stations,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

A1. Construction of floors [spill control and containment] at pump houses for cargo pumps used for the transfer of flammable liquids or combustible liquids.

This applies to piers and wharves that have flammable liquid or combustible liquid installations.

Exception: except as stated in
- Section 4.6., which applies to marine fuel-dispensing stations,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that liquid spillage or leakage will not be contained, which could lead to the spread of liquid outside the pump house, which could lead to harm to the public.
Application and intent of Division B provisions

3) The person responsible for directing the operations shall
a) prior to the transfer of cargo, ascertain that no unauthorized repair work is being carried out on the pier or wharf and that there are no open flames in the vicinity,

b) during the transfer of cargo, monitor the progress of the loading and unloading to prevent overflow, and

c) inspect the hose and connections for leakage and, if leakage occurs, stop the operations.

Application

A1. Duties [inspection of hose and connections for leakage; monitoring of transfer to prevent overflow] of persons responsible for directing cargo transfer to or from marine tank vessels.

This applies to piers and wharves that have flammable liquid or combustible liquid installations.

Exception:
except as stated in
- Section 4.6., which applies to marine fuel-dispensing stations,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that liquid spillage or leakage will occur during transfer operations, which could lead to harm to the public.
3) The person responsible for directing the operations shall:
   a) prior to the transfer of cargo, ascertain that no unauthorized repair work is being carried out on the pier or wharf and that there are no open flames in the vicinity,
   b) during the transfer of cargo, monitor the progress of the loading and unloading to prevent overflow, and

3) The person responsible for directing the operations shall
   a) prior to the transfer of cargo, ascertain that no unauthorized repair work is being carried out on the pier or wharf and that there are no open flames in the vicinity,
   b) during the transfer of cargo, monitor the progress of the loading and unloading to prevent overflow, and
   c) inspect the hose and connections for leakage and, if leakage occurs, stop the operations.

Application

A1. Duties [as applying to stopping operations if leakage occurs] of persons responsible for directing operations involved with cargo transfer to or from marine tank vessels.

This applies to piers and wharves that have flammable liquid or combustible liquid installations.

Exception:
except as stated in
   - Section 4.6., which applies to marine fuel-dispensing stations,
   - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
   - Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
   - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
   - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
   - the storage of aerosol products covered under Subsection 3.2.5.,
   - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
   - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
   - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
   - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

1. To limit the probability that liquid spillage or leakage will not be minimized, which could lead to the spread of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Duties [as applying to stopping operations if leakage occurs] of persons responsible for directing operations involved with cargo transfer to or from marine tank vessels. This applies to piers and wharves that have flammable liquid or combustible liquid installations.

Exception:

- Section 4.6., which applies to marine fuel-dispensing stations,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

I1. To limit the probability that liquid spillage or leakage will not be minimized, which could lead to the spread of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
A1. Duties [as applying to stopping operations if leakage occurs] of persons responsible for directing operations involved with cargo transfer to or from marine tank vessels.

This applies to piers and wharves that have flammable liquid or combustible liquid installations.

**Exception:**
except as stated in
- Section 4.6., which applies to marine fuel-dispensing stations,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

**Application**

3) The person responsible for directing the operations shall
a) prior to the transfer of cargo, ascertain that no unauthorized repair work is being carried out on the pier or what and that there are no open flames in the vicinity,
b) during the transfer of cargo, monitor the progress of the loading and unloading to prevent overflow, and
c) inspect the hose and connections for leakage and, if leakage occurs, stop the operations.

**Intent**

I1. To limit the probability that liquid spillage or leakage will not be minimized, which could lead to the spread of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.8.11.1.(3)-06
Attribution - functional statement/objective F01-OS1.1

CodeText

3) The person responsible for directing the operations shall:
   a) prior to the transfer of cargo, ascertain that no unauthorized repair work is being carried out on the pier or what and that there are no open flames in the vicinity,
   b) during the transfer of cargo, monitor the progress of the loading and unloading to prevent overflow, and
   c) inspect the hose and connections for leakage and, if leakage occurs, stop the operations.

Application

A1. Duties [with reference to checking for unauthorized repair work or the presence of open flames] of persons responsible for directing cargo transfer to or from marine tank vessels.

This applies to piers and wharves that have flammable liquid or combustible liquid installations.

Exception:
   except as stated in
   - Section 4.6., which applies to marine fuel-dispensing stations,
   - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
   - Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
   - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
   - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
   - the storage of aerosol products covered under Subsection 3.2.5.,
   - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
   - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
   - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
   - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that ignition sources will not be controlled, which could lead to the ignition of vapour, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Electrical connection of tanks of marine vessels to shore piping, unless cathodic protection facilities are operating.

This applies to piers and wharves that have installations for flammable liquids or combustible liquids.

Exception:

- except as stated in Section 4.6., which applies to marine fuel-dispensing stations,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that static charges will build up, which could lead to the ignition of vapour, which could lead to harm to persons.

I2. To waive the requirement for bonding connections when this could lead to an ignition hazard caused by stray currents associated with cathodic corrosion protection systems on the shore, pier or wharf, which could lead to the ignition of vapour, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Maintaining the electrical connection of tanks of marine vessels to shore piping, unless cathodic protection facilities are operating, until such time as the cargo hose has been disconnected and any spillage has been removed.

This applies to piers and wharves that have installations for flammable liquids or combustible liquids.

Exception:

except as stated in

- Section 4.6., which applies to marine fuel-dispensing stations,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that static charges will build up, which could lead to the ignition of vapour, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Length of cargo hose used for the transfer of flammable liquids or combustible liquids between the tanks of marine vessels and piers or wharves that have installations for flammable liquids or combustible liquids.

Exception:
- except as stated in - Section 4.6., which applies to marine fuel-dispensing stations,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

Attribute - functional statement/objective  F43-OH5

1) When transfer operations are completed,
   a) the valves on the hose connections shall be closed, and
   b) the cargo hose shall be drained into appropriate containers that shall be emptied in conformance with Subsection 4.1.6.

Exception:
except as stated in
- Section 4.6., which applies to marine fuel-dispensing stations,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application
A1. Valve closing and cargo hose draining when transfer operations are completed.

This applies to the transfer of flammable liquids or combustible liquids between tank vessels and piers or wharves, at piers and wharves that have flammable liquid or combustible liquid installations.

Exception:
except as stated in
- Section 4.6., which applies to marine fuel-dispensing stations,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent
I1. To limit the probability of the escape or spill of liquid, which could lead to harm to the public.
I2. To direct Alberta Fire Code 2006 users to Subsection 4.1.6.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Valve closing and cargo hose draining when transfer operations are completed.

This applies to the transfer of flammable liquids or combustible liquids between tank vessels and piers or wharves, at piers and wharves that have flammable liquid or combustible liquid installations.

Exception: except as stated in
- Section 4.6., which applies to marine fuel-dispensing stations,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

1) When transfer operations are completed,
   a) the valves on the hose connections shall be closed, and
   b) the cargo hose shall be drained into appropriate containers that shall be emptied in conformance with Subsection 4.1.6.

Exception: except as stated in
- Section 4.6., which applies to marine fuel-dispensing stations,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability of the escape or spill of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.

I2. To direct Alberta Fire Code 2006 users to Subsection 4.1.6.
A1. Discharging of liquid on piers or wharves or overboard during the draining and emptying of the cargo hose after transfer operations are completed, as referred to in Clause 4.8.11.4.(1)(b)]. This applies to the transfer of flammable liquids or combustible liquids between tank vessels and piers or wharves at piers and wharves that have flammable liquid or combustible liquid installations.

Exception:
- except as stated in Section 4.6., which applies to marine fuel-dispensing stations,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

I1. To limit the probability of the escape or spill of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Discharging of liquid on piers or wharves or overboard during the draining and emptying of the cargo hose [after transfer operations are completed, as referred to in Clause 4.8.11.4.(1)(b)].

This applies to the transfer of flammable liquids or combustible liquids between tank vessels and piers or wharves, at piers and wharves that have flammable liquid or combustible liquid installations.

Exception:
- except as stated in Section 4.6., which applies to marine fuel-dispensing stations,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

2) Care shall be taken that no liquid is discharged on a pier or wharf or overboard during draining and emptying operations.

Exception:
- Section 4.6., which applies to marine fuel-dispensing stations,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability of the escape or spill of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

Attribution - functional statement/objective Not applicable

CodeText

1) Except as provided in Sentence (2), this Section applies to process plants, including refineries, that contain industrial processes involving flammable liquids or combustible liquids.

Application

A1. Process plants, including refineries, which contain industrial processes involving flammable liquids or combustible liquids.

Exception: except as stated in
- Sentence 4.9.1.1.(2), which applies to distilleries [which are required to conform to Section 4.10.],
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To state the application of Section 4.9.
2) This Section does not apply to distilleries covered in Section 4.10.

Application

Distilleries covered in Section 4.10.

Intent

I1. To exempt distilleries [which are required to conform to Section 4.10.] from the application of Section 4.9.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Location, with respect to property lines and buildings on the same property, of outdoor processing equipment. This applies to process plants, including refineries, which contain industrial processes involving flammable liquids or combustible liquids.

Application

This applies to process plants, including refineries, which contain industrial processes involving flammable liquids or combustible liquids.

Exception:

- Sentence 4.9.1.1.(2), which applies to distilleries [which are required to conform to Section 4.10.],
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To direct Alberta Fire Code 2006 users to Sentences 4.9.2.1.(2) to 4.9.2.1.(4).
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Minimum distances to property lines and buildings on the same property, for outdoor processing equipment having emergency relief venting and working pressures of not more than 17 kPa (gauge) shall be separated from property lines and buildings on the same property by distances a) equal to those in Table 4.3.2.1. for stable liquids, and b) 2.5 times those in Table 4.3.2.1. for unstable liquids.

This applies to process plants, including refineries, which contain industrial processes involving flammable liquids or combustible liquids.

Exception:

- except as stated in Sentence 4.9.2.1.(4), where equipment protection against fire or explosion is not provided,
- Sentence 4.9.1.1.(2), which applies to distilleries which are required to conform to Section 4.10.,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations".,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the transportation of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

I1. To limit the probability that a fire involving the outdoor processing equipment will spread to adjacent buildings or facilities, which could lead to damage to adjacent buildings or facilities.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Minimum distances to property lines and buildings on the same property, for outdoor processing equipment having emergency relief venting and working pressures of not more than 17 kPa (gauge) shall be separated from property lines and buildings on the same property by distances:

(a) equal to those in Table 4.3.2.1. for stable liquids, and

(b) 2.5 times those in Table 4.3.2.1. for unstable liquids.

This applies to process plants, including refineries, which contain industrial processes involving flammable liquids or combustible liquids.

Exception:

- except as stated in Sentence 4.9.2.1.(4), where equipment protection against fire or explosion is not provided,
- Sentence 4.9.1.1.(2), which applies to distilleries (which are required to conform to Section 4.10.),
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to:
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that a fire involving the outdoor processing equipment will lead to harm to persons in outdoor areas or adjacent buildings.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

A1. Minimum distances to property lines and buildings on the same property, for outdoor processing equipment having emergency relief venting and working pressures of more than 17 kPa (gauge) and used for stable liquids or unstable liquids.

This applies to process plants, including refineries, which contain industrial processes involving flammable liquids or combustible liquids.

Exception:
- except as stated in Sentence 4.9.2.1.(4), where equipment protection against fire or explosion is not provided,
- Sentence 4.9.1.1.(2), which applies to distilleries [which are required to conform to Section 4.10.],
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

3) Except as provided in Sentence (4), outdoor processing equipment having emergency relief venting and a working pressure more than 17 kPa (gauge) shall be separated from property lines and buildings on the same property by distances:
   a) 1.5 times those in Table 4.3.2.1. for stable liquids, and
   b) 4 times those in Table 4.3.2.1. for unstable liquids.

Application

A1. Minimum distances to property lines and buildings on the same property, for outdoor processing equipment having emergency relief venting and working pressures of more than 17 kPa (gauge) and used for stable liquids or unstable liquids.

This applies to process plants, including refineries, which contain industrial processes involving flammable liquids or combustible liquids.

Exception:

- except as stated in Sentence 4.9.2.1.(4), where equipment protection against fire or explosion is not provided,
- Sentence 4.9.1.1.(2), which applies to distilleries [which are required to conform to Section 4.10.],
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to:
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that a fire involving the outdoor processing equipment will lead to harm to persons in outdoor areas or adjacent buildings.

4) Where protection is not provided against fires or explosions in processing equipment, the distances in Sentences (2) and (3) shall be doubled. (See Sentence 4.3.2.5.(2).)

Application

A1. Minimum distances to property lines and buildings on the same property, for outdoor processing equipment used for stable liquids or unstable liquids [referred to in Sentences 4.9.2.1.(2) and 4.9.2.1.(4)] and having no protection against fire or explosion [protection referred to in Sentence 4.3.2.5.(2)].

This applies to process plants, including refineries, which contain industrial processes involving flammable liquids or combustible liquids.

Exception:
eXception: except as stated in
- Sentence 4.9.1.1.(2), which applies to distilleries [which are required to conform to Section 4.10.],
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To supersede the requirements of Sentences 4.9.2.1.(2) and 4.9.2.1.(4) and allow unprotected equipment if certain measures are taken [distances are increased].

This is to limit the probability that a fire involving the outdoor processing equipment will spread to adjacent buildings or facilities, which could lead to damage to adjacent buildings or facilities.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Minimum distances to property lines and buildings on the same property, for outdoor processing equipment used for stable liquids or unstable liquids [referred to in Sentences 4.9.2.1.(2) and 4.9.2.1.(4)] and having no protection against fire or explosion [protection referred to in Sentence 4.3.2.5.(2)].

This applies to process plants, including refineries, which contain industrial processes involving flammable liquids or combustible liquids.

Exception:
- except as stated in Sentence 4.9.1.1.(2), which applies to distilleries [which are required to conform to Section 4.10.],
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

4) Where protection is not provided against fires or explosions in processing equipment, the distances in Sentences (2) and (3) shall be doubled. (See Sentence 4.3.2.5.(2).)

CodeReference (including record number) 4.9.2.1.(4)-02

Application and intent of Division B provisions

Application

A1. Explosion venting for rooms or buildings where Class IA liquids or unstable liquids are processed.

This applies to process plants, including refineries, which contain industrial processes involving flammable liquids or combustible liquids.

Exception:

- except as stated in
  - Sentence 4.9.4.2.(1), where the processing equipment is designed or vented to withstand an explosion, or provided with an explosion prevention system,
  - Sentence 4.9.1.1.(2), which applies to distilleries [which are required to conform to Section 4.10.],
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
    - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that an explosion in the room or building will lead to structural or mechanical damage to the room or the building.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Explosion venting for rooms or buildings where Class IA liquids or unstable liquids are processed.

This applies to process plants, including refineries, which contain industrial processes involving flammable liquids or combustible liquids.

Exception:

- except as stated in
  - Sentence 4.9.4.2.(1), where the processing equipment is designed or vented to withstand an explosion, or provided with an explosion prevention system,
  - Sentence 4.9.1.1.(2), which applies to distilleries which are required to conform to Section 4.10,
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - solid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
    - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that an explosion in the room or building will lead to structural or mechanical damage to the room or the building, which could lead to harm to persons in other parts of the building.
Application and intent of Division B provisions

A1. Minimum fire-resistance rating of fire separations for areas where unstable liquids are handled or where small scale unit chemical processes are carried on shall be separated from the remainder of the building by a fire separation having a fire resistance rating of not less than 2 h.

This applies to process plants, including refineries, which contain industrial processes involving flammable or combustible liquids.

Exception:

1) Areas where unstable liquids are handled or where small scale unit chemical processes are carried on shall be separated from the remainder of the building by a fire separation having a fire resistance rating of not less than 2 h.

- Sentence 4.9.1.1.(2), which applies to distilleries which are required to conform to Section 4.10.,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

1. To limit the probability that fire will spread from this area to other parts of the building, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.9.3.2.(1)-02
Attribution - functional statement/objective F03-OS1.2

CodeText

1) Areas where unstable liquids are handled or where small scale unit chemical processes are carried on shall be separated from the remainder of the building by a fire separation having a fire resistance rating of not less than 2 h.

Application

A1. Minimum fire-resistance rating of fire separations for areas where unstable liquids are handled or where small scale unit chemical processes are carried on.

This applies to process plants, including refineries, which contain industrial processes involving flammable liquids or combustible liquids.

Exception:

- except as stated in - Sentence 4.9.1.1.(2), which applies to distilleries [which are required to conform to Section 4.10.],
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

11. To limit the probability that fire will spread from this area to other parts of the building, which could lead to harm to persons in the other parts of the building.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Basements or covered pits in buildings where Class I and II liquids are handled in chemical processes shall not have basements or covered pits.

Exception:
- Sentence 4.9.1.1.(2), which applies to distilleries [which are required to conform to Section 4.10.],
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent
11. To limit the probability that vapour will accumulate in low areas such as basements or pits in sufficient quantity to form an ignitable mixture, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Design, with respect to limiting flammable vapour-air mixtures under normal operating conditions, of equipment and of building ventilation systems.

This applies to process plants, including refineries, which contain industrial processes involving flammable liquids or combustible liquids.

Exception:

- Sentence 4.9.1.1.(2), which applies to distilleries [which are required to conform to Section 4.10.],
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

F01-OS1.1

Application and intent of Division B provisions

CodeReference (including record number) 4.9.3.4.(1)-01
Attribution - functional statement/objective F01-OS1.1

1) Equipment used in a building and the ventilation of the building shall be designed so as to limit flammable vapour-air mixtures under normal operating conditions to the interior of equipment, and to not more than 1.5 m from such equipment. (See Appendix A.)

F01-OS1.1

To limit the probability that vapours will accumulate in sufficient quantity to form an ignitable mixture, which could lead to their ignition from a nearby ignition source, which could lead to a fire or explosion, which could lead to harm to persons.

I1. To limit the probability that vapours will accumulate in sufficient quantity to form an ignitable mixture, which could lead to their ignition from a nearby ignition source, which could lead to a fire or explosion, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.9.3.5.(1)-01
Attribution - functional statement/objective F81-OS1.1,OS1.2

Application

A1. Design and construction of a building containing processing equipment involving flammable liquids or combustible liquids shall be constructed in conformance with the Alberta Building Code 2006.

This applies to process plants, including refineries, which contain industrial processes involving flammable liquids or combustible liquids.

Exception:

except as stated in
- Sentence 4.9.1.1.(2), which applies to distilleries [which are required to conform to Section 4.10.],
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that defects in the design or construction of a building could result in conditions that would lead to interference with or damage to processing equipment, which could lead to the escape and spread of liquid, which could lead to the ignition of vapour by a nearby ignition source, which could lead to spread of fire, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

CodeReference (including record number) 4.9.3.5.(1)-02

1. Buildings containing processing equipment involving flammable liquids or combustible liquids shall be constructed in conformance with the Alberta Building Code 2006.

Application

A1. Design and construction of a building containing processing equipment involving flammable liquids or combustible liquids.

This applies to process plants, including refineries, which contain industrial processes involving flammable liquids or combustible liquids.

Exception:
except as stated in
- Sentence 4.9.1.1.(2), which applies to distilleries [which are required to conform to Section 4.10.],
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that defects in the design or construction of a building could result in conditions that would lead to interference with or damage to processing equipment, which could lead to the escape and spread of liquid, which could lead to the ignition of vapour by a nearby ignition source, which could lead to spread of fire, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Design and construction of a building containing processing equipment involving flammable liquids or combustible liquids shall be constructed in conformance with the Alberta Building Code 2006.

This applies to process plants, including refineries, which contain industrial processes involving flammable liquids or combustible liquids.

Exception:

- except as stated in Sentence 4.9.1.1.(2), which applies to distilleries which are required to conform to Section 4.10,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Measures [spill prevention] to prevent the unintentional escape of liquids and vapours, and b) minimize the quantity escaping in the event of accidental release.

This applies to process plants, including refineries, which contain industrial processes involving flammable liquids or combustible liquids.

Exception: except as stated in
- Sentence 4.9.1.1.(2), which applies to distilleries [which are required to conform to Section 4.10.],
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”.
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

I1. To limit the probability of the escape of liquid, which could lead to harm to the public.

1) Processing equipment where an explosion hazard is present shall be:
   a) designed to withstand the explosion pressure without damage to the equipment,
   b) provided with explosion venting in conformance with NFPA 68, “Venting of Deflagrations,” or
   c) provided with an explosion prevention system in conformance with NFPA 69, “Explosion Prevention Systems.”

I1. To limit the probability that an explosion involving the processing equipment will occur, which could lead to harm to nearby persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Fire protection and suppression systems, where such protection is warranted [by fire hazards associated with the process].

This applies to [indoor and outdoor] areas at process plants, including refineries, which contain industrial processes involving flammable liquids or combustible liquids.

Exception:

except as stated in
- Sentence 4.9.1.1.1.(2), which applies to distilleries which are required to conform to Section 4.10.,
- Sentence 4.1.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability of the spread of fire to other parts of the building or outdoor area, which could lead to damage to the building or facility.

I2. To direct Alberta Fire Code 2006 users to Article 2.1.3.5., Sentence 6.4.1.1.1.(1), Article 2.1.3.6. and Article 6.6.1.1. for automatic fire suppression systems.
Application and intent of Division B provisions

**Alberta Fire Code 2006**

**Application**

1. Fire protection and suppression systems, where such protection is warranted by fire hazards associated with the process.

This applies to [indoor and outdoor] areas at process plants, including refineries, which contain industrial processes involving flammable liquids or combustible liquids.

**Exception:**

- except as stated in Sentence 4.9.1.1.(2), which applies to distilleries which are required to conform to Section 4.10.,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

**Intent**

1. To limit the probability of the spread of fire to other parts of the building or outdoor area, which could lead to harm to persons.

2. To direct Alberta Fire Code 2006 users to Article 2.1.3.5., Sentence 6.4.1.1.(1), Article 2.1.3.6. and Article 6.6.1.1. for automatic fire suppression systems.
A1. Emergency procedures at [indoor and outdoor] areas at process plants, including refineries, which contain industrial processes involving flammable liquids or combustible liquids.

Exception:
- except as stated in Sentence 4.9.1.1.(2), which applies to distilleries [which are required to conform to Section 4.10.],
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
Application and intent of Division B provisions

Application

A1. Areas or buildings in distilleries where distilled beverage alcohols are concentrated, blended, mixed, stored or packaged. (See Appendix A.)

Exception:

- Sentence 4.10.1.1.(2), which applies to the storage, handling and use of flammable liquids or combustible liquids other than distilled beverage alcohols in a distillery,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to...
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To state the application of Section 4.10.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Storage, handling and use of flammable liquids or combustible liquids other than distilled beverage alcohols in a distillery shall conform to Part 4.

Exception:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

A1. Storage, handling and use of flammable liquids or combustible liquids other than distilled beverage alcohols in a distillery.

Exception:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To exclude flammable liquids or combustible liquids other than distilled beverage alcohols from the application of Section 4.10. [and, as a result, to limit the application of Section 4.10. to distilled beverage alcohols].

I2. To direct Alberta Fire Code 2006 users to other Sections of Part 4.
Application and intent of Division B provisions

A1. Requirements in Section 4.10. that conflict with other requirements in Part 4.

Exception: except as stated in
- Sentence 4.10.1.1.(2), which applies to the storage, handling and use of flammable liquids or combustible liquids other than distilled beverage alcohols in a distillery,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

I1. To clarify that the specific requirements in Section 4.10. are intended to take precedence over the more general provisions of Part 4 [more specifically Sections 4.1. to 4.5.] in case of conflicts.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Occupancy classification of buildings or parts of buildings in which distilled beverage alcohol is distilled, processed or stored in bulk shall be classified as high-hazard industrial occupancies.

Exception:

1) Except as provided in Sentence (2), buildings or parts of buildings in which distilled beverage alcohol is distilled, processed or stored in bulk shall be classified as high-hazard industrial occupancies.

- Sentence 4.10.2.1.1.(2), which applies to buildings used for the storage of distilled beverage alcohols in closed containers
- Sentence 4.10.1.1.(2), which applies to the storage, handling and use of flammable liquids or combustible liquids other than distilled beverage alcohols in a distillery.
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

11. To state the occupancy classification that reflects the high level of fire hazard expected to be present for the purpose of applying the Alberta Building Code 2006 and the Alberta Fire Code 2006.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Occupancy classification of buildings or parts of buildings used for storage of distilled beverage alcohols in closed containers.

Exception:

- Sentence 4.10.1.1.(2), which applies to the storage, handling and use of flammable liquids or combustible liquids other than distilled beverage alcohols in a distillery,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

11. To supersede Sentence 4.10.2.1.(1) in order to permit a less stringent occupancy classification for what is expected to be a relatively lower fire hazard.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

CodeReference (including record number) 4.10.3.1.1(1)-01
Attribution - functional statement/objective F20,F80,F43-OH5

Application

A1. Design, fabrication and testing, with respect to anticipated maximum working pressures, operating temperatures, internal corrosion conditions and structural stresses to which they could be subjected.

Exception:

- except as stated in - Sentence 4.10.1.1.(2), which applies to the storage, handling and use of flammable liquids or combustible liquids other than distilled beverage alcohols in a distillery,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations"," - appliances and their ancillary equipment within the scope of CAN/CSA-B139, - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects, - the storage of aerosol products covered under Subsection 3.2.5., - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act, - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act, - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and - the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To exempt certain storage containers from the application of Sentence 4.3.1.2.(1), which would otherwise require the containers to conform to certain standards, if certain conditions are met [the containers are designed, fabricated and tested for the anticipated maximum working pressure, operating temperature, internal corrosion conditions and structural stresses to which they could be subjected], on the basis that these conditions provide an equivalent level of safety.

This is to limit the probability that working pressure, operating temperature, internal corrosion conditions or structural stresses will lead to failure of the storage containers, which could lead to the escape of liquid from the containers, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Design, fabrication and testing, with respect to anticipated maximum working pressures, operating temperatures, internal corrosion conditions and structural stresses, of storage tanks, wooden vats, barrels, drums or containers used for the storage or processing of distilled beverage alcohols. This applies to areas or buildings in distilleries where distilled beverage alcohols are concentrated, blended, mixed, stored or packaged.

Exception:
except as stated in
- Sentence 4.10.1.1.(2), which applies to the storage, handling and use of flammable liquids or combustible liquids other than distilled beverage alcohols in a distillery,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act.
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent
I1. To exempt certain storage containers from the application of Sentence 4.3.1.2.(1), which would otherwise require the containers to conform to certain standards, if certain conditions are met [the containers are designed, fabricated and tested for the anticipated maximum working pressure, operating temperature, internal corrosion conditions and structural stresses to which they could be subjected], on the basis that these conditions provide an equivalent level of safety.

This is to limit the probability that working pressure, operating temperature, internal corrosion conditions or structural stresses will lead to failure of the storage containers, which could lead to
- the escape of liquid from the containers, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons, and
- the release of vapour from the containers, which could lead to the ignition of the vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.10.3.2.(1)-01
Attribution - functional statement/objective F02,F04-OS1.2

A1. Timber supports, foundations and anchorage of storage tanks shall comply with Subsection 4.3.3., except that timber supports shall be permitted.

Application

This applies to areas or buildings in distilleries where distilled beverage alcohols are concentrated, blended, mixed, stored or packaged.

Exception:

- Sentence 4.10.1.1.(2), which applies to the storage, handling and use of flammable liquids or combustible liquids other than distilled beverage alcohols in a distillery;
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants;
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations";
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To exempt timber supports from the application of Sentence 4.3.3.1.(1), which would otherwise require the supports to be made of concrete, masonry or steel, on the basis that timber supports provide an equivalent level of safety.

This is to limit the probability that

- the supports will contribute to a fire under the tank, which could lead to failure of the tank from exposure to the fire, which could lead to fire growth and spread of fire, which could lead to harm to persons, and
- a fire will lead to the premature failure [collapse] of the supports, which could lead to the collapse of the tank, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

A1. Supports, foundations and anchorage of storage tanks shall comply with Subsection 4.3.3., except that timber supports shall be permitted.

Exception:
except as stated in
- Sentence 4.10.3.2.(1) [the ending of the Sentence], which applies to timber supports,
- Sentence 4.10.3.2.(2), which applies to tank supports that have less than a 2 h fire-resistance rating and are protected by an automatic fire suppression system conforming to Article 2.1.3.1.,
- Sentence 4.10.1.1.(2), which applies to the storage, handling and use of flammable liquids or combustible liquids other than distilled beverage alcohols in a distillery,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent
H1. To direct Alberta Fire Code 2006 users to Subsection 4.3.3.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Automatic fire suppression protection of storage tank supports having less than a 2 h fire-resistance rating shall be protected by an automatic fire suppression system.

Application

This applies to areas or buildings in distilleries where distilled beverage alcohols are concentrated, blended, mixed, stored or packaged.

Exception:

- except as stated in Sentence 4.10.1.1.(2), which applies to the storage, handling and use of flammable liquids or combustible liquids other than distilled beverage alcohols in a distillery,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the production and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To exempt supports having less than a 2 h fire-resistance rating from the application of Sentence 4.3.3.1.(3), which would otherwise require a minimum 2 h fire-resistance rating, if certain measures are taken [the supports are protected by an automatic fire suppression system].

This is to limit the probability that a fire will not be suppressed or controlled, which could lead to the spread of the fire, which could lead to an exposure of the supports to the fire, which could lead to the premature failure [collapse] of the supports, which could lead to the collapse of the tank, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Automatic fire suppression protection of storage tank supports having less than a 2 h fire-resistance rating shall be protected by an automatic fire suppression system.

This applies to areas or buildings in distilleries where distilled beverage alcohols are concentrated, blended, mixed, stored or packaged.

Exception:
- Sentence 4.10.1.1.(2), which applies to the storage, handling and use of flammable liquids or combustible liquids other than distilled beverage alcohols in a distillery,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent
11. To direct Alberta Fire Code 2006 users to Article 2.1.3.5., Sentence 6.4.1.1.(1), Article 2.1.3.6. and Article 6.6.1.1.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Automatic fire suppression system protection of the area underneath storage tanks that are-
- greater than 1.2 m in diameter, and
- used for distilled beverage alcohol.

This applies to areas or buildings in distilleries where distilled beverage alcohols are concentrated, blended, mixed, stored or packaged.

Exception:
- except as stated in Sentence 4.10.1.1.(2), which applies to the storage, handling and use of flammable liquids or combustible liquids other than distilled beverage alcohol in a distillery,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that a fire will not be suppressed or controlled, which could lead to the spread of the fire, which could lead to an exposure of the supports to the fire, which could lead to the premature failure [collapse] of the supports, which could lead to the collapse of the tank, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
A.1. Automatic fire suppression system protection of the area underneath storage tanks that are:
- greater than 1.2 m in diameter, and
- used for distilled beverage alcohol.

This applies to areas or buildings in distilleries where distilled beverage alcohols are concentrated, blended, mixed, stored or packaged.

Exception:
except as stated in
- Sentence 4.10.1.1.(2), which applies to the storage, handling and use of flammable liquids or combustible liquids other than distilled beverage alcohol in a distillery,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Normal and emergency vents on storage tanks used for distilled beverage alcohol.

This applies to areas or buildings in distilleries where distilled beverage alcohols are concentrated, blended, mixed, stored or packaged.

Exception:
- except as stated in Sentence 4.10.1.1.(2), which applies to the storage, handling and use of flammable liquids or combustible liquids other than distilled beverage alcohols in a distillery;
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants;
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations";
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

1. Normal and emergency vents shall be provided on storage tanks in conformance with good engineering practice. (See Appendix A.)

Exception:
- except as stated in:
  - Sentence 4.10.1.1.(2), which applies to the storage, handling and use of flammable liquids or combustible liquids other than distilled beverage alcohols in a distillery,
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To exempt vents from the application of Subsections 4.3.4. and 4.3.5. which would otherwise impose certain vent requirements, if certain measures are taken (vents conform with good engineering practice).

This is to limit the probability that excessive internal tank vacuum or pressure will develop in normal or fire conditions, which could lead to the failure of the tank, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Normal and emergency vents on storage tanks used for distilled beverage alcohol.

This applies to areas or buildings in distilleries where distilled beverage alcohols are concentrated, blended, mixed, stored or packaged.

Exception:
- except as stated in Sentence 4.10.1.1.(2), which applies to the storage, handling and use of flammable liquids or combustible liquids other than distilled beverage alcohols in a distillery,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To exempt vents from the application of Subsections 4.3.4. and 4.3.5. which would otherwise impose certain vent requirements, if certain measures are taken (vents conform with good engineering practice).

This is to limit the probability that
- excessive internal tank vacuum or pressure will develop in normal or fire conditions, which could lead to the failure of the tank, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons, and
- vapour will accumulate inside or outside the building, which could lead to the ignition of the vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Sprinkler protection [design and installation] for buildings where more than 25,000 L of distilled beverage alcohol are stored in storage tanks, drums or barrels.

This applies to distilleries where distilled beverage alcohols are concentrated, blended, mixed, stored or packaged.

Exception:

1) Where more than 25,000 L of distilled beverage alcohol in storage tanks, drums or barrels are stored inside buildings, such buildings shall be sprinklered.

I1. To limit the probability that a fire will not be suppressed or controlled, which could lead to the spread of the fire to other parts of the building, which could lead to damage to the building.

I2. To direct Alberta Fire Code 2006 users to Article 2.1.3.6., which in turn references the Alberta Building Code 2006. This, in effect, expands the application of the Alberta Building Code 2006 to existing buildings, in which more than 25,000 L of distilled beverage alcohol are stored in storage tanks, drums or barrels.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Sprinkler protection [design and installation] for buildings where more than 25,000 L of distilled beverage alcohol are stored in storage tanks, drums or barrels.

This applies to distilleries where distilled beverage alcohols are concentrated, blended, mixed, stored or packaged.

Exception:
- except as stated in Sentence 4.10.1.1.(2), which applies to the storage, handling and use of flammable liquids or combustible liquids other than distilled beverage alcohols in a distillery,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

1) Where more than 25,000 L of distilled beverage alcohol in storage tanks, drums or barrels are stored inside buildings, such buildings shall be sprinklered.

I1. To limit the probability that a fire will not be suppressed or controlled, which could lead to the spread of the fire to other parts of the building, which could lead to harm to persons.

I2. To direct Alberta Fire Code 2006 users to Article 2.1.3.6., which in turn references the Alberta Building Code 2006. This, in effect, expands the application of the Alberta Building Code 2006 to existing buildings, in which more than 25,000 L of distilled beverage alcohol are stored in storage tanks, drums or barrels.
Application and intent of Division B provisions

Application

This applies to areas or buildings in distilleries where distilled beverage alcohols are concentrated, blended, mixed, stored or packaged.

Exception:

- except as stated in Sentence 4.10.1.1.(2), which applies to the storage, handling and use of flammable liquids other than distilled beverage alcohols in a distillery,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the storage of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To direct Alberta Fire Code 2006 users to Part 3. of Division B.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Design, fabrication, assembly and inspection, with respect to anticipated maximum working pressures, operating temperatures, internal corrosion conditions and structural stresses, of piping and pumping systems containing distilled beverage alcohols. This applies to areas or buildings in distilleries where distilled beverage alcohols are concentrated, blended, mixed, stored or packaged.

Exception: except as stated in:
- Sentence 4.10.1.1.(2), which applies to the storage, handling and use of flammable liquids or combustible liquids other than distilled beverage alcohols in a distillery,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

CodeText

1) The design, fabrication, assembly and inspection of piping and pumping systems containing distilled beverage alcohols shall be suitable for the anticipated maximum working pressures, operating temperatures, internal corrosion conditions and structural stresses to which they could be subjected. (See Appendix A.)

Application

To limit the probability that working pressures, operating temperatures, internal corrosion or structural stresses will lead to the failure of the piping or pumping system, which could lead to the escape of liquid, which could lead to harm to the public.

Intent
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Design, fabrication, assembly and inspection, with respect to anticipated maximum working pressures, operating temperatures, internal corrosion conditions and structural stresses, of piping and pumping systems containing distilled beverage alcohols. This applies to areas or buildings in distilleries where distilled beverage alcohols are concentrated, blended, mixed, stored or packaged.

Exception: except as stated in - Sentence 4.10.1.1.(2), which applies to the storage, handling and use of flammable liquids or combustible liquids other than distilled beverage alcohols in a distillery, - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants, - Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations", - appliances and their ancillary equipment within the scope of CAN/CSA-B139, - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects, - the storage of aerosol products covered under Subsection 3.2.5, - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act, - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act, - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

I1. To limit the probability that working pressures, operating temperatures, internal corrosion or structural stresses will lead to the failure of the piping or pumping system, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Design, fabrication, assembly and inspection, with respect to anticipated maximum working pressures, operating temperatures, internal corrosion conditions and structural stresses, of piping and pumping systems containing distilled beverage alcohols. This applies to areas or buildings in distilleries where distilled beverage alcohols are concentrated, blended, mixed, stored or packaged.

Exception:
- except as stated in Sentence 4.10.1.1.(2), which applies to the storage, handling and use of flammable liquids or combustible liquids other than distilled beverage alcohols in a distillery,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

The design, fabrication, assembly and inspection of piping and pumping systems containing distilled beverage alcohols shall be suitable for the anticipated maximum working pressures, operating temperatures, internal corrosion conditions and structural stresses to which they could be subjected. (See Appendix A.)

Application

A1. Design, fabrication, assembly and inspection, with respect to anticipated maximum working pressures, operating temperatures, internal corrosion conditions and structural stresses, of piping and pumping systems containing distilled beverage alcohols.

This applies to areas or buildings in distilleries where distilled beverage alcohols are concentrated, blended, mixed, stored or packaged.

Exception:
except as stated in
- Sentence 4.10.1.1.(2), which applies to the storage, handling and use of flammable liquids or combustible liquids other than distilled beverage alcohols in a distillery,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that working pressures, operating temperatures, internal corrosion or structural stresses will lead to the failure of the piping or pumping system, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Application

A1. Natural or mechanical ventilation of areas where alcohol vapours are released from storage tanks or process equipment under normal operating conditions.

This applies to areas or buildings in distilleries where distilled beverage alcohols are concentrated, blended, mixed, stored or packaged.

Exception:

- except as stated in Sentence 4.10.1.1.(2), which applies to the storage, handling and use of flammable liquids or combustible liquids other than distilled beverage alcohols in a distillery,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To exempt distilleries from the application of Subsection 4.1.7. if certain measures are taken [areas where alcohol vapours are released are provided with natural or mechanical ventilation].

These measures are to limit the probability that vapours will accumulate in sufficient quantity to form an ignitable mixture, which could lead to their ignition from a nearby ignition source, which could lead to a fire or explosion, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

1) Emergency drainage systems shall be provided to direct any spilled or leaked distilled beverage alcohol to a safe location.

This applies to areas or buildings in distilleries where distilled beverage alcohols are concentrated, blended, mixed, stored or packaged.

Exception:

- except as stated in Sentence 4.10.1.1.(2), which applies to the storage, handling and use of flammable liquids or combustible liquids other than distilled beverage alcohols in a distillery,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that escaped liquids will lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

1) Emergency drainage systems shall be provided to direct any spilled or leaked distilled beverage alcohol to a safe location.

Application

A1. Drainage of spilled or leaked distilled beverage alcohol.

This applies to areas or buildings in distilleries where distilled beverage alcohols are concentrated, blended, mixed, stored or packaged.

Exception:

except as stated in

- Sentence 4.10.1.1.(2), which applies to the storage, handling and use of flammable liquids or combustible liquids other than distilled beverage alcohols in a distillery,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

H1. To limit the probability that escaped liquids will create a fire or lead to the spread of a fire outside the spill area, which could lead to harm to persons, including emergency responders, in other parts of the building, adjacent buildings or adjacent outdoor areas.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

CodeReference (including record number) 4.10.8.1.(1)-01

1) Except as permitted in Sentence (2), in maturing warehouses, at least one portable extinguisher having a rating of 4-A:30-B:C shall be located adjacent to each exit.

Application

A1. Rating, minimum number and location of portable extinguishers adjacent to exits in maturing warehouses.

This applies to distilleries where distilled beverage alcohols are concentrated, blended, mixed, stored or packaged.

Exception:

1) Except as stated in

- Sentence 4.10.8.1.(2), which applies to maturing warehouses in which a hose station is installed adjacent to each exit,
- Sentence 4.10.1.1.(2), which applies to the storage, handling and use of flammable liquids or combustible liquids other than distilled beverage alcohols in a distillery,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",

appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that fire suppression operations using portable extinguishers will be delayed or ineffective in controlling or suppressing a fire, which could lead to the spread of the fire, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

2) Hose stations are permitted to be installed in lieu of portable extinguishers at locations required in Sentence (1), and spaced so that the travel distance to the nearest hose is not greater than 25 m.

Application

A1. Location and spacing of hose stations used in lieu of portable extinguishers adjacent to exits required in Sentence 4.10.8.1.(1) in maturing warehouses.

This applies to distilleries where distilled beverage alcohols are concentrated, blended, mixed, stored or packaged.

Exception:

except as stated in
- Sentence 4.10.1.1.(2), which applies to the storage, handling and use of flammable liquids or combustible liquids other than distilled beverage alcohols in a distillery,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To supersede the requirements of Sentence 4.10.8.1.(1), which would otherwise require portable extinguishers, and permit hose stations, if certain measures are taken [with respect to the location and spacing of the hose stations].

This is to limit the probability that fire suppression operations using hose stations will be delayed or ineffective in controlling or suppressing a fire, which could lead to the spread of the fire, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Application
A1. Location and spacing of hose stations used in lieu of portable extinguishers adjacent to exits required in Sentence (1), and spaced so that the travel distance to the nearest hose is not greater than 25 m.

This applies to distilleries where distilled beverage alcohols are concentrated, blended, mixed, stored or packaged.

A1. Rating and minimum number of portable extinguishers on industrial lift trucks.

Application

This applies to industrial lift trucks used in areas or buildings in distilleries where distilled beverage alcohols are concentrated, blended, mixed, stored or packaged.

Exception: except as stated in
- Sentence 4.10.1.1.(2), which applies to the storage, handling and use of flammable liquids or combustible liquids other than distilled beverage alcohols in a distillery,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that fire suppression operations using portable extinguishers will be delayed or ineffective in controlling or suppressing a fire, which could lead to the spread of the fire, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

3) At least one portable extinguisher having a rating of 30-B:C shall be located on each industrial lift truck.

Application

A1. Rating and minimum number of portable extinguishers on industrial lift trucks.

This applies to industrial lift trucks used in areas or buildings in distilleries where distilled beverage alcohols are concentrated, blended, mixed, stored or packaged.

Exception:
except as stated in
- Sentence 4.10.1.1.(2), which applies to the storage, handling and use of flammable liquids or combustible liquids other than distilled beverage alcohols in a distillery,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that fire suppression operations using portable extinguishers will be delayed or ineffective in controlling or suppressing a fire, which could lead to the spread of the fire, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

A1. Standpipe and hose systems.

This applies to areas or buildings in distilleries where distilled beverage alcohols are concentrated, blended, mixed, stored or packaged.

Exception:

- Sentence 4.10.8.2.(2), which applies to sprinklered buildings
- Sentence 4.10.1.1.(2), which applies to the storage, handling and use of flammable liquids or combustible liquids other than distilled beverage alcohols in a distillery
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations"
- Appliances and their ancillary equipment within the scope of CAN/CSA-B139
- The storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects
- The storage of aerosol products covered under Subsection 3.2.5.
- Liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act
- The production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act
- Liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions
- The storage and handling of liquefied natural gas and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that fire suppression operations using standpipe and hose systems will be delayed or ineffective in controlling or suppressing a fire, which could lead to the spread of the fire, which could lead to damage to the building or facility.

I2. To direct Alberta Fire Code 2006 users to Article 2.1.3.1. which, in turn, references the Alberta Building Code 2006.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Standpipe and hose systems.

This applies to areas or buildings in distilleries where distilled beverage alcohols are concentrated, blended, mixed, stored or packaged.

Exception: except as stated in
- Sentence 4.10.8.2.(2), which applies to sprinklered buildings
- Sentence 4.10.1.1.(2), which applies to the storage, handling and use of flammable liquids or combustible liquids other than distilled beverage alcohols in a distillery.
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

Except as provided in Sentence (2), standpipe and hose systems shall be provided and installed in distilleries in conformance with Article 2.1.3.1.

Exception: except as stated in
- Sentence 4.10.8.2.(2), which applies to sprinklered buildings
- Sentence 4.10.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that fire suppression operations using standpipe and hose systems will be delayed or ineffective in controlling or suppressing a fire, which could lead to the spread of the fire, which could lead to harm to persons.

I2. To direct Alberta Fire Code 2006 users to Article 2.1.3.1. which, in turn, references the Alberta Building Code 2006.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Water supply for small hose (38 mm) stations [required in Sentence 4.10.8.2.(1)] in buildings that are sprinklered in conformance with Article 2.1.3.6.

This applies to sprinklered buildings in distilleries where distilled beverage alcohols are concentrated, blended, mixed, stored or packaged.

Exception:

except as stated in:
- Sentence 4.10.1.1.(2), which applies to the storage, handling and use of flammable liquids or combustible liquids other than distilled beverage alcohols in a distillery,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To supersede the requirements of Sentence 4.10.8.2.(1), which would otherwise require standpipe and hose stations conforming to Article 2.1.3.1. [which references the Alberta Building Code 2006, which references certain design and installation standards, which would require supply from the standpipe system], and permit small hose stations to be supplied from interior sprinkler piping, if certain measures are provided [the building is sprinklered in conformance with Article 2.1.3.6.].

This is to limit the probability that fire suppression operations using small hose stations will be ineffective in controlling or suppressing a fire in ordinary combustibles, which could lead to the spread of the fire, which could lead to damage to the building.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.10.8.2.(2)-02
Attribution - functional statement/objective F02-OS1.2

CodeText

2) Where a building is sprinklered in conformance with Article 2.1.3.6., small hose (38 mm) stations are permitted to be supplied from interior sprinkler piping.

Application

A1. Water supply for small hose (38 mm) stations [required in Sentence 4.10.8.2.(1)] in buildings that are sprinklered in conformance with Article 2.1.3.6.

This applies to sprinklered buildings in distilleries where distilled beverage alcohols are concentrated, blended, mixed, stored or packaged.

Exception:

- except as stated in Sentence 4.10.1.1.(2), which applies to the storage, handling and use of flammable liquids or combustible liquids other than distilled beverage alcohols in a distillery;
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants;
- Sentence 4.1.1.1.(3), which applies to:
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations";
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139;
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects;
  - the storage of aerosol products covered under Subsection 3.2.5.;
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act;
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act;
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To supersede the requirements of Sentence 4.10.8.2.(1), which would otherwise require standpipe and hose stations conforming to Article 2.1.3.1. [which references the Alberta Building Code 2006, which references certain design and installation standards, which would require supply from the standpipe system], and permit small hose stations to be supplied from interior sprinkler piping, if certain measures are provided [the building is sprinklered in conformance with Article 2.1.3.6.].

This is to limit the probability that fire suppression operations using small hose stations will be ineffective in controlling or suppressing a fire in ordinary combustibles, which could lead to the spread of the fire, which could lead to harm to persons.

CodeText

1) This Section applies to tank vehicles when located on a property covered in this Code.

Application

A1. Tank vehicles for flammable liquids and combustible liquids, while located on properties covered by this Code.

Exception:

- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
    - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To state the application of Section 4.11.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Minimum number and rating of portable extinguishers on tank vehicles.

This applies to tank vehicles carrying flammable liquids or combustible liquids while located on properties covered by this Code.

Exception:
except as stated in
- Sentence 4.7.5.1.(1), which applies to provision of portable extinguishers at hazardous locations in bulk storage plants,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquified petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that fire suppression operations using portable extinguishers will be delayed or ineffective in controlling or suppressing a fire, which could lead to the spread of the fire, which could lead to damage to the building or facility.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Minimum number and rating of portable extinguishers on tank vehicles.

This applies to tank vehicles carrying flammable liquids or combustible liquids while located on properties covered by this Code.

Exception:

- except as stated in Sentence 4.7.5.1.(1), which applies to provision of portable extinguishers at hazardous locations in bulk storage plants,

Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Hot works performed on or in close proximity to a tank vehicle shall conform to Section 5.2. and Article 4.11.2.6.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the safety regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To direct Alberta Fire Code 2006 users to Section 5.2 and Article 4.11.2.6.
A1. Prohibition on smoking or the use of open flames within 7.5 m of a tank vehicle that is being loaded, unloaded or repaired.

This applies to tank vehicles for flammable liquids and combustible liquids, while located on properties covered by this Code.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

I1. To limit the probability that smoking material or open flames will ignite vapours, which could lead to a fire or explosion, which could lead to harm to persons.
A1. Prohibition on smoking or the use of open flames within 7.5 m of a tank vehicle that is being loaded, unloaded or repaired.

This applies to tank vehicles for flammable liquids and combustible liquids, while located on properties covered by this Code.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
Application and intent of Division B provisions

CodeText

1) A tank vehicle shall not be parked inside a building unless the building is specifically designed for that purpose or the cargo tank has been purged in accordance with this Section.

Application

A1. Parking of tank vehicles inside buildings that are specifically designed for the parking of tank vehicles.

This applies to tank vehicles carrying flammable liquids or combustible liquids while located on properties covered by this Code.

Exception: except as stated in
- Article 4.11.2.6., which applies to a vehicle with a cargo tank that has been purged of flammable vapours or combustible vapours,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

11. To limit the probability that:
- vapour from a tank vehicle will accumulate in sufficient quantity to form an ignitable mixture, which could lead to the ignition of the vapour from a nearby ignition source, which could lead to damage to the building or facility,
- a fire involving a tank vehicle will not be suppressed or controlled, which could lead to the spread of fire to the building, which could lead to damage to the building or facility,
- a spill of liquid from a tank vehicle will not be contained or controlled, which could lead to the spread of liquid outside of the spill area, which could lead to the ignition of the vapour from a nearby ignition source, which could lead to damage to the building or facility, and
- ignition sources near a tank vehicle will not be minimized, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
A tank vehicle shall not be parked inside a building unless the building is specifically designed for that purpose or the cargo tank has been purged in accordance with this Section.

Application

This applies to tank vehicles carrying flammable liquids or combustible liquids while located on properties covered by this Code.

Exception:

- Article 4.11.2.6., which applies to a vehicle with a cargo tank that has been purged of flammable vapours or combustible vapours,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

To limit the probability that:
- vapour from a tank vehicle will accumulate in sufficient quantity to form an ignitable mixture, which could lead to the ignition of the vapour from a nearby ignition source, which could lead to harm to persons,
- a fire involving a tank vehicle will not be suppressed or controlled, which could lead to the spread of fire to the building, which could lead to harm to persons,
- a spill of liquid from a tank vehicle will not be contained or controlled, which could lead to the spread of liquid outside of the spill area, which could lead to the ignition of the vapour from a nearby ignition source, which could lead to harm to persons, and
- ignition sources near a tank vehicle will not be minimized, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.

2) If a tank vehicle is to be parked inside a building, provisions shall be made to ensure that there is sufficient space in the tank to compensate for thermal expansion of the flammable liquid or combustible liquid.

Application

A1. Spillage of liquid from a tank vehicle parked inside a building that is specifically designed for the parking of tank vehicles.

This applies to tank vehicles carrying flammable liquids or combustible liquids while located on properties covered by this Code.

Exception: except as stated in
- Article 4.11.2.6., which applies to a vehicle with a cargo tank that has been purged of flammable vapours or combustible vapours,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability of the escape of liquid from a tank vehicle, which could lead to the accumulation and subsequent ignition of vapour by a nearby ignition source, which could lead to damage to the building or facility.
A1. Leakage of liquid from the tank, piping or valves of a tank vehicle parked inside a building that is specifically designed for the parking of tank vehicles.

This applies to tank vehicles carrying flammable liquids or combustible liquids while located on properties covered by this Code.

Exception:
- Article 4.11.2.6., which applies to a vehicle with a cargo tank that has been purged of flammable vapours or combustible vapours,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent
- To limit the probability of the escape of liquid from the tank, piping or valves of a tank vehicle, which could lead to the accumulation and subsequent ignition of vapour by a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Leakage of liquid from the tank, piping or valves of a tank vehicle parked inside a building that is specifically designed for the parking of tank vehicles.

This applies to tank vehicles carrying flammable liquids or combustible liquids while located on properties covered by this Code.

Exception:
except as stated in
- Article 4.11.2.6., which applies to a vehicle with a cargo tank that has been purged of flammable vapours or combustible vapours,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

Application

A1. Maximum duration for vehicle operators to leave tank vehicles unattended outside buildings.

This applies to tank vehicles for flammable liquids and combustible liquids, while located on properties covered by this Code.

Exception:

except as stated in
- Sentence 4.11.2.4.(2), which allows parking for more than 1 h if certain conditions are met,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
- the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that a fire or explosion involving the tank vehicle will spread to an adjacent building, which could lead to damage to adjacent buildings or facilities.
Application and intent of Division B provisions

4.11.2.4.(1)-02

Attribution - functional statement/objective

F81,F34-OS1.1 and F02-OS1.2

A1. Maximum duration for vehicle operators to leave tank vehicles unattended outside buildings.

1) Except as provided in Sentence (2), a tank vehicle is permitted to be left unattended by the vehicle operator outside a building for not more than 1 h.

Exception: except as stated in
- Sentence 4.11.2.4.(2), which allows parking for more than 1 h if certain conditions are met,
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

This applies to tank vehicles for flammable liquids and combustible liquids, while located on properties covered by this Code.

Intent

I1. To limit the probability that a malfunction of the tank vehicle or inappropriate actions from unauthorized persons will lead to a fire or explosion involving the tank vehicle, which could lead to harm to nearby persons.

I2. To limit the probability that a fire or explosion involving the tank vehicle will spread to a nearby building, which could lead to harm to persons in the building.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.11.2.4.(2)-01
Attribution - functional statement/objective F81-OS1.1 and F03-OS1.2

CodeText

2) A tank vehicle is permitted to be left unattended by the vehicle operator outside a building for more than 1 h, but only in a parking space
a) that is located not less than 15 m from a building, and
b) where the tank vehicle is not exposed to undue hazard from accident or collision.

Application

A1. Maximum duration for vehicle operators to leave tank vehicles unattended outside buildings, when parked in a parking space
- that is located not less than 15 m from a building, and
- where the tank vehicle is not exposed to undue hazard from accident or collision.

This applies to tank vehicles for flammable liquids and combustible liquids, while located on properties covered by this Code.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To supersede the time limit of Sentence 4.11.2.4.(1) in order to permit a tank vehicle to be left unattended for more than 1 hour if certain conditions are met.

This is to limit the probability that
- the tank vehicle will become involved in a vehicular accident or other impacts, which could lead to damage to the tank vehicle, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons nearby, and
- a fire or explosion involving the tank vehicle will spread to a nearby building, which could lead to harm to persons in the building.
A1. Maximum duration for vehicle operators to leave tank vehicles unattended outside a building for more than 1 h, but only in a parking space:

- that is located not less than 15 m from a building, and
- where the tank vehicle is not exposed to undue hazard from accident or collision.

This applies to tank vehicles for flammable liquids and combustible liquids, while located on properties covered by this Code.

Exception:

- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Prohibition on the use of damaged or leaking containers or tanks for the transportation of flammable liquids or combustible liquids.

This applies to tank vehicles for flammable liquids and combustible liquids, while located on properties covered by this Code.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

1) Containers or tanks that leak or that have become damaged shall not be used to transport flammable liquids or combustible liquids.

CodeText

1) Containers or tanks that leak or that have become damaged shall not be used to transport flammable liquids or combustible liquids.

This applies to tank vehicles for flammable liquids and combustible liquids, while located on properties covered by this Code.

Except as stated in:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

11. To limit the probability of the unwanted release of liquid or vapour, which could lead to the accumulation and subsequent ignition of vapour by a nearby ignition source, which could lead to a fire or explosion, which could lead to harm to persons.
A1. Prohibition on the use of damaged or leaking containers or tanks for the transportation of flammable liquids or combustible liquids.

This applies to tank vehicles for flammable liquids and combustible liquids, while located on properties covered by this Code.

Exception:
- except as stated in - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
1. Prohibition on the use of damaged or leaking containers or tanks for the transportation of flammable liquids or combustible liquids.

This applies to tank vehicles for flammable liquids and combustible liquids, while located on properties covered by this Code.

Exception:

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.
Application and intent of Division B provisions

**Application**

A1. Prohibition on the repair or service, within a building, of the cargo tank of a tank vehicle unless:

- All flammable liquids and combustible liquids have been removed from the cargo tank and stored in a storage tank or container constructed and installed in accordance with Part 4,
- The cargo tank has been purged with steam of flammable vapours or combustible vapours, outside the building or in a well-ventilated area, to less than 10% of the lower explosive limit, and
- While the cargo tank is being repaired it is monitored for the presence of flammable vapours and combustible vapours using combustible gas detection equipment.

This applies to tank vehicles for flammable liquids and combustible liquids, while located on properties covered by this Code.

**Exception:**

- Except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to:
  - Appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - Liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - The production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - Liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- The storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

**Intent**

I1. To limit the probability that:

- Sources of ignition involved in the repair or servicing of the cargo tank could ignite vapour within the tank, which could lead to a fire or explosion, which could lead to harm to nearby persons,
- An ignition source located in the vicinity of the repair area could ignite vapour from the tank vehicle, which could lead to a fire or explosion, which could lead to harm to nearby persons, and
- A fire or explosion involving the tank vehicle will lead to harm to nearby persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.11.2.6.(1)-02
Attribution - functional statement/objective F01,F02,F43-OP1.1,OP1.2

CodeText

1) No person shall repair or service the cargo tank of a tank vehicle in a building unless:
   a) all flammable liquids and combustible liquids have been removed from the cargo tank and stored in a storage tank or container constructed and installed in accordance with this Part,
   b) the cargo tank has been purged with steam of flammable vapours or combustible vapours, outside the building or in a well-ventilated area, to less than 10% of the lower explosive limit, and
   c) while the cargo tank is being repaired it is monitored for the presence of flammable vapours and combustible vapours using combustible gas detection equipment.

Application

A1. Prohibition on the repair or service, within a building, of the cargo tank of a tank vehicle unless:

   - all flammable liquids and combustible liquids have been removed from the cargo tank and stored in a storage tank or container constructed and installed in accordance with Part 4,
   - the cargo tank has been purged with steam of flammable vapours or combustible vapours, outside the building or in a well-ventilated area, to less than 10% of the lower explosive limit, and
   - while the cargo tank is being repaired it is monitored for the presence of flammable vapours and combustible vapours using combustible gas detection equipment.

This applies to tank vehicles for flammable liquids and combustible liquids, while located on properties covered by this Code.

Exception:

- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
  - Sentence 4.1.1.1.(3), which applies to
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
    - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

II. To limit the probability that

   - sources of ignition involved in the repair or servicing of the cargo tank could ignite vapour within the tank, which could lead to a fire or explosion, which could lead to damage to the building or facilities,
   - an ignition source located in the vicinity of the repair area could ignite vapour from the tank vehicle, which could lead to a fire or explosion, which could lead to damage to the building or facilities, and
   - a fire or explosion involving the tank vehicle will lead to damage to the building or facilities.
2) No person shall repair, service or store a tank vehicle in a building other than for repairs conducted in conformance with Article 4.11.2.2. and Sentence (1), unless:

- the building is acceptable to the authority having jurisdiction, or
- all flammable liquids and combustible liquids have been removed from the cargo tank and the tank has been purged of flammable vapours or combustible vapours, outside the building or in a well-ventilated area, to less than 10% of the lower explosive limit.

This applies to tank vehicles for flammable liquids and combustible liquids, while located on properties covered by this Code.

Application

A1. Prohibition on the repair, service or storage of a tank vehicle in a building other than for repairs conducted in conformance with Article 4.11.2.2. and Sentence 4.11.2.6.(1), unless:

- the building is acceptable to the authority having jurisdiction, or
- all flammable liquids and combustible liquids have been removed from the cargo tank and the tank has been purged of flammable vapours or combustible vapours, outside the building or in a well-ventilated area, to less than 10% of the lower explosive limit.

This applies to tank vehicles for flammable liquids and combustible liquids, while located on properties covered by this Code.

Exception:

- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to:
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that:

- sources of ignition involved in the repair, service or storage of the tank vehicle could ignite vapour within the tank, which could lead to a fire or explosion, which could lead to damage to the building or facility,
- an ignition source located in the vicinity of the repair area could ignite vapour from the tank vehicle, which could lead to a fire or explosion, which could lead to damage to the building or facility, and
- a fire or explosion involving the tank vehicle will lead to damage to the building or facility.
Application and intent of Division B provisions

Attribution - functional statement/objective F01.F02.F49-OS1.1.OS1.2

CodeText

Application

2) No person shall repair, service or store a tank vehicle in a building other than for repairs conducted in conformance with Article 4.11.2.2. and Sentence (1), unless

a) the building is acceptable to the authority having jurisdiction, or

b) all flammable liquids and combustible liquids have been removed from the cargo tank and the tank has been purged of flammable vapours or combustible vapours, outside the building or in a well-ventilated area, to less than 10% of the lower explosive limit.

This applies to tank vehicles for flammable liquids and combustible liquids, while located on properties covered by this Code.

Exception:

except as stated in

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I. To limit the probability that

- sources of ignition involved in the repair, service or storage of the tank vehicle could ignite vapour within the tank, which could lead to a fire or explosion, which could lead to harm to nearby persons,
- an ignition source located in the vicinity of the repair area could ignite vapour from the tank vehicle, which could lead to a fire or explosion, which could lead to harm to nearby persons, and
- a fire or explosion involving the tank vehicle will lead to harm to nearby persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Loading and unloading of tank vehicles.

This applies to tank vehicles carrying flammable liquids or combustible liquids while located on properties covered by this Code.

Exception: except as stated in:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

1. To expand the application of Subsection 4.7.4., which would otherwise apply only to bulk plants, to the loading and unloading of tank vehicles.
Application and intent of Division B provisions

Alberta Fire Code 2006

CodeReference (including record number) 4.11.3.2.(1)-01
Attribution - functional statement/objective F01-OS1.1

CodeText

1) During loading and unloading operations, a tank vehicle and its delivery equipment shall be separated from ignition sources by distances conforming to the requirements for dispensers in Articles 4.6.3.3. and 4.6.8.7.

Application

A1. Minimum distance of tank vehicles and delivery equipment from ignition sources during loading and unloading operations.

This applies to tank vehicles for flammable liquids and combustible liquids, while located on properties covered by this Code.

Exception:

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that nearby ignition sources will ignite vapour, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

CodeReference (including record number) 4.11.3.2.(1)-02
Attribution - functional statement/objective F20,F81-OS1.1

1) During loading and unloading operations, a tank vehicle and its delivery equipment shall be separated from ignition sources by distances conforming to the requirements for dispensers in Articles 4.6.3.3. and 4.6.8.7.

A1. Minimum distance of tank vehicles and delivery equipment from ignition sources during loading and unloading operations.

This applies to tank vehicles for flammable liquids and combustible liquids, while located on properties covered by this Code.

Exception: except as stated in:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to:
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that malfunction of, damage to, tampering with, misuse of, or excessive forces on the delivery equipment could lead to a leakage of flammable liquids or combustible liquids, which could lead to spread of flammable vapours, which could lead to ignition by nearby ignition sources, which could lead to spread of fire, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Minimum distance of tank vehicles and delivery equipment from ignition sources during loading and unloading operations. This applies to tank vehicles for flammable liquids and combustible liquids, while located on properties covered by this Code.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To expand the application of Articles 4.6.3.3. and 4.6.8.7. to include tank vehicle separation.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Protection against static electric charges accumulation during loading and unloading of tank vehicles.

This applies to tank vehicles for flammable liquids and combustible liquids, while located on properties covered by this Code.

Exception:

1) During loading and unloading of a tank vehicle, measures shall be taken against static electric charges in conformance with Articles 4.1.8.2. and 4.7.4.5.

Intent

I1. To limit the probability that static electric charges will build up, which could lead to the ignition of vapour, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

Application

A1. Protection against static electric charges accumulation during loading and unloading of tank vehicles.

This applies to tank vehicles for flammable liquids and combustible liquids, while located on properties covered by this Code.

Exception:

except as stated in

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To expand the application of Articles 4.1.8.2. and 4.7.4.5.
Application and intent of Division B provisions

**Application**

A1. Shutting off the flow of liquid by trained personnel in an emergency, during loading and unloading of **tank vehicles**.

This applies to **tank vehicles** for **flammable liquids** and **combustible liquids**, while located on properties covered by this Code.

**Exception:**

- except as stated in
  - Sentence 4.1.1.1.(2), which applies to unique hazards in **process plants**,
  - Sentence 4.1.1.1.(3), which applies to
    - the transportation of **flammable liquids or combustible liquids** under the "Transportation of Dangerous Goods Regulations",
    - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
    - the storage of **flammable liquids or combustible liquids** on farms for individual farm use and on isolated construction projects,
    - the storage of aerosol products covered under Subsection 3.2.5.,
    - liquefied petroleum gas-burning **appliances** and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
    - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
    - the storage and handling of raw production **flammable liquids or combustible liquids** and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

**Intent**

I1. To limit the probability that the escape of liquid will not be minimized in the event of an unwanted release, which could lead to the spread of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Shutting off the flow of liquid by trained personnel in an emergency, during loading and unloading of tank vehicles.

This applies to tank vehicles for flammable liquids and combustible liquids, while located on properties covered by this Code.

Exception:

except as stated in

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that the escape of liquid will not be minimized in the event of an unwanted release, which could lead to the spread of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.

I2. To limit the probability that the escape of liquid will not be minimized in the event of a fire, which could lead to the spread of the fire, which could lead to damage to the building or facility.
Application and intent of Division B provisions

CodeText

1) During loading and unloading of a tank vehicle, trained personnel shall be in a position to shut off the flow of liquid in an emergency.

Application

A1. Shutting off the flow of liquid by trained personnel in an emergency, during loading and unloading of tank vehicles.

This applies to tank vehicles for flammable liquids and combustible liquids, while located on properties covered by this Code.

Exception:

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that the escape of liquid will not be minimized in the event of an unwanted release, which could lead to the spread of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.

I2. To limit the probability that the escape of liquid will not be minimized in the event of a fire, which could lead to the spread of the fire, which could lead to harm to persons.
A1. When a compartment of a tank vehicle has been used to carry a Class I liquid, the compartment, piping and accessory delivery equipment shall be drained of liquid before a Class II or IIIA liquid is loaded.

This applies to tank vehicles for flammable liquids and combustible liquids, while located on properties covered by this Code.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent
I1. To limit the probability that Class II or IIIA liquids will become contaminated with [more volatile] Class I liquids, which could lead to the accumulation of vapour in sufficient quantity to form an ignitable mixture, which could lead to the ignition of the vapour from a nearby ignition source, which could lead to harm to persons.

1) When the loading or unloading of Class I liquids is done without the use of the engine of the tank vehicle, the engine ignition shall be shut off during the transfer operations.

Application

A1. Shutting off of the engine ignition during transfer operations, when loading or unloading of Class I liquids is done without the use of the engine of the tank vehicle.

This applies to tank vehicles for flammable liquids and combustible liquids, while located on properties covered by this Code.

Exception:

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
- the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that vapour will be ignited by the engine, which could lead to a fire or explosion, which could lead to harm to persons.

I2. To limit the probability that the vapour from Class I liquid will be drawn into the engine’s intake system, which could lead to running away, over-revving or overheating of the engine, which could lead to a fire, which could lead to harm to persons.
Application and intent of Division B provisions

2) If the vents of the receiving or delivery tank are obstructed, the transfer of liquid shall be stopped.

Application

A1. Stoppage of the transfer of liquid during the unloading of tank vehicles, if the receiving tank or delivery tank vents are obstructed.

This applies to tank vehicles carrying flammable liquids or combustible liquids while located on properties covered by this Code.

Exception:

except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that excessive pressure will build up in the receiving tank, which could lead to failure of the tank, which could lead to the escape of liquid, which could lead to harm to the public.

I2. To limit the probability that excessive back pressure will build up in the receiving tank, which could lead to overflow from the tank, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Application

A1. Stoppage of the transfer of liquid during the unloading of tank vehicles, if the receiving tank or delivery tank vents are obstructed.

This applies to tank vehicles carrying flammable liquids or combustible liquids while located on properties covered by this Code.

Exception: except as stated in:

- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that excessive pressure will build up in the receiving tank, which could lead to failure of the tank, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.

I2. To limit the probability that excessive back pressure will build up in the receiving tank, which could lead to overflow from the tank, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
A1. Parking of tank vehicles on streets, shoulders or sidewalks while unloading at fuel-dispensing stations.

This applies to tank vehicles for flammable liquids and combustible liquids, while located on properties covered by this Code.

Exception: except as stated in

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

11. To limit the probability that

- the tank vehicle will become involved in a vehicular accident or other impacts, which could lead to damage to the tank vehicle, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons nearby,
- an ignition source located outside of the fuel-dispensing station area will ignite vapour from the tank vehicle, which could lead to a fire or explosion, which could lead to harm to nearby persons, and
- a fire or explosion involving the tank vehicle will lead to harm to nearby persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

A1. Refuelling of vehicles with Class I liquids directly from a tank vehicle shall not be permitted.

Exception:
- except as stated in Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

1) Dispensing Class I liquids into the fuel tank of vehicles directly from a tank vehicle shall not be permitted.

I1. To limit the probability of a fire or explosion hazard [e.g. due to an ignition source located outside a designated fuel-dispensing area or due to proximity to open flames, building openings, or other hazards], which could lead to the ignition of vapour, which could lead to harm to persons.

I2. To limit the probability that liquid will escape and spread outside the filling area, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.

I3. To limit the probability that a vehicle will be involved in a vehicular accident or that objects will make impact on the vehicle while it is being refuelled, which could lead to damage to the vehicle, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Refuelling of vehicles with Class I liquids directly from tank vehicles shall not be permitted.

Exception: except as stated in

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that liquid will escape and spread outside the filling area, which could lead to harm to the public.

I2. To limit the probability that a vehicle will be involved in a vehicular accident or that objects will make impact on the vehicle while it is being refuelled, which could lead to damage to the vehicle, which could lead to the escape of liquid, which could lead to harm to the public.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application

A1. Refuelling of vehicles with Class I liquids directly from a tank vehicle shall not be permitted.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability of a fire or explosion hazard [e.g. due to an ignition source located outside a designated fuel-dispensing area or due to proximity to open flames, building openings, or other hazards], which could lead to the ignition of vapour, which could lead to damage to the building or facility.

I2. To limit the probability that liquid will escape and spread outside the filling area, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.

I3. To limit the probability that a vehicle will be involved in a vehicular accident or that objects will make impact on the vehicle while it is being refuelled, which could lead to damage to the vehicle, which could lead to the escape of liquid, which could lead to the ignition of vapour from a nearby ignition source, which could lead to damage to the building or facility.
2) Dispensing Class II or IIIA liquids into the fuel tank of vehicles directly from a tank vehicle having a capacity greater than 3 000 L shall be permitted only if:

a) the vehicles are located outdoors on a property where they are
i) not less than 6 m away from any building, and
ii) not exposed to undue hazard from accident or collision,
b) at least 2 portable extinguishers having a minimum rating of 80-B:C are provided on the tank vehicle,
c) the delivery hoses and automatically closing hose nozzle valves used for the fuel-dispensing operations conform to Subsection 4.6.5.,
d) the tank vehicle operator is given training and equipment for controlling any spillage that may occur during the fuel-dispensing operations, and
e) in cases where fuel-dispensing operations are carried out at a site not conforming to Subsection 4.1.6., measures are in place to control a spill of not less than 1 000 L.

Application

A1. Restrictions on refuelling of vehicles with Class II or IIIA liquids directly from tank vehicles.

Exception:
except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
  - the storage of aerosol products covered under Subsection 3.2.5.,
  - liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
  - liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
  - the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that an ignition source from an adjacent building or facility will ignite vapours generated by the dispensing operations, which could lead to harm to persons.

I2. To limit the probability that a fire originating in the dispensing area will spread to adjacent buildings, tanks or facilities, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

A1. Restrictions on locations of vehicles while refuelling with Class II or IIIA liquids directly from a tank vehicle having a capacity greater than 3 000 L shall be permitted only if:

a) the vehicles are located outdoors on a property where they are
i) not less than 6 m away from any building, and
ii) not exposed to undue hazard from accident or collision,
b) at least 2 portable extinguishers having a minimum rating of 80-B:C are provided on the tank vehicle,
c) the delivery hoses and automatically closing hose nozzle valves used for the fuel-dispensing operations conform to Subsection 4.6.5.,
d) the tank vehicle operator is given training and equipment for controlling any spillage that may occur during the fuel-dispensing operations, and
e) in cases where fuel-dispensing operations are carried out at a site not conforming to Subsection 4.1.6., measures are in place to control a spill of not less than 1 000 L.

Application

2) Dispensing Class II or IIIA liquids into the fuel tank of vehicles directly from a tank vehicle having a capacity greater than 3 000 L shall be permitted only if:

a) the vehicles are located outdoors on a property where they are
i) not less than 6 m away from any building, and
ii) not exposed to undue hazard from accident or collision,
b) at least 2 portable extinguishers having a minimum rating of 80-B:C are provided on the tank vehicle,
c) the delivery hoses and automatically closing hose nozzle valves used for the fuel-dispensing operations conform to Subsection 4.6.5.,
d) the tank vehicle operator is given training and equipment for controlling any spillage that may occur during the fuel-dispensing operations, and
e) in cases where fuel-dispensing operations are carried out at a site not conforming to Subsection 4.1.6., measures are in place to control a spill of not less than 1 000 L.

Intent

I1. To limit the probability that vapour generated by the dispensing operations will accumulate in or near adjacent buildings, tanks or facilities, which could lead to the ignition of the vapour from an ignition source in or near adjacent buildings or facilities, which could lead to a fire or explosion, which could lead to damage to adjacent buildings or facilities.

I2. To limit the probability that a fire originating in the dispensing area will spread to adjacent buildings, tanks or facilities, which could lead to damage to adjacent buildings or facilities.
Application and intent of Division B provisions

d) the tank vehicle operator is given training and equipment for controlling any spillage that may occur during the fuel-dispensing operations, and

e) in cases where fuel-dispensing operations are carried out at a site not conforming to Subsection 4.1.6., measures are in place to control a spill of not less than 1 000 L.

Application

A1. Portable extinguishers on tank vehicles used to refuel vehicles with Class II or IIIA liquids directly from the tank vehicles.

Exception: except as stated in
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the “Transportation of Dangerous Goods Regulations”,
- appliances and their ancillary equipment within the scope of the CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To limit the probability that fire suppression operations using portable extinguishers will be delayed or ineffective in controlling or suppressing a fire, which could lead to the spread of the fire, which could lead to harm to persons.
Application and intent of Division B provisions

2) Dispensing Class II or IIIA liquids into the fuel tank of vehicles directly from a tank vehicle having a capacity greater than 3,000 L shall be permitted only if:

a) the vehicles are located outdoors on a properly maintained property where they are
i) not less than 6 m away from any building, and
ii) not exposed to undue hazard from accident or collision,

b) at least 2 portable extinguishers having a minimum rating of 80-B:C are provided on the tank vehicle,

c) the delivery hoses and automatically closing hose nozzle valves used for the fuel-dispensing operations conform to Subsection 4.6.5.,

d) the tank vehicle operator is given training and equipment for controlling any spillage that may occur during the fuel-dispensing operations, and

e) in cases where fuel-dispensing operations are carried out at a site not conforming to Subsection 4.1.6., measures are in place to control a spill of not less than 1,000 L.

Application

A1. Training of tank vehicle operators responsible for refuelling of vehicles with Class II or IIIA liquids directly from tank vehicles.

Exception:

except as stated in:

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I. To limit the probability that liquid will escape, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.

I2. To limit the probability that liquid will spread beyond the spill area, which could lead to the ignition of vapour from a nearby ignition source, which could lead to harm to persons.
Application and intent of Division B provisions

Alberta Fire Code 2006

Application and intent of Division B provisions

A1. Spill control measures in place during refuelling of vehicles with Class II or IIIA liquids directly from tank vehicles.

Exception:
- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Application

A1. Spill control measures in place during refuelling of vehicles with Class II or IIIA liquids directly from tank vehicles.

Exception:
- except as stated in
  - the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
  - appliances and their ancillary equipment within the scope of CAN/CSA-B139,
  - the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,

CodeText

Application

A1. Requirements for delivery hoses and hose nozzle valves used for refuelling of vehicles with Class II or IIIA liquids directly from tank vehicles.

Exception: except as stated in

- Sentence 4.1.1.1.(2), which applies to unique hazards in process plants,
- Sentence 4.1.1.1.(3), which applies to the transportation of flammable liquids or combustible liquids under the "Transportation of Dangerous Goods Regulations",
- appliances and their ancillary equipment within the scope of CAN/CSA-B139,
- the storage of flammable liquids or combustible liquids on farms for individual farm use and on isolated construction projects,
- the storage of aerosol products covered under Subsection 3.2.5.,
- liquefied petroleum gas-burning appliances and equipment within the scope of the gas regulations made pursuant to the Safety Codes Act,
- the production, storage or handling of liquefied natural gas within the scope of the gas regulations made pursuant to the Safety Codes Act,
- liquid halogenated hydrocarbons and mixtures containing hydrocarbons that do not have flash points but that may be flammable under certain conditions, and
- the storage and handling of raw production flammable liquids or combustible liquids and the incidental storage and handling of hydrocarbon-based chemicals resulting from or used during crude oil or natural gas exploration, production or transmission as mandated under the scope of EUB Guide 55.

Intent

I1. To direct Alberta Fire Code 2006 users to Subsection 4.6.5. for requirements regarding delivery hoses and automatically closing hose nozzles.
